

Jing-Zhang Noonline SLA / Midday Service Line

Round 1 Spatial Closure

Three SLA path types share the existing ROAD-001 spine. Levels are formed by shade, seating, water, public entries, crossing waiting, detour control and staffed fallback.

Node Rules

12 service nodes follow endpoint, turning, staying, crossing, public-entry and heat/rain-risk rules; 5 fallback points are selected from them.

AI OFF

Without a phone or screen, fixed wayfinding, routes, seats, water, public entries and staff still support a complete midday trip.

Board 2 / Key Areas and Risks

Three Distinct Moves

Zhongzhiyuan focuses on a validation porch, AI Origin on public entry and no-phone storytelling, and Dazhongsi on station enquiry, ground-floor service and event buffering.

Boundary

This round adds no geometry, no AI features and no major project. Official boundary, controls, utilities and microclimate data remain Round 2 inputs.
