

Jing-Zhang AI Vein

One Belt, Symbiotic Innovation · Concept Overview

Using the Jing-Zhang Heritage Park as the historical and public-space spine, an operable AI city design of "one belt, three cores, multi-point scenarios, and a blue-green slow-mobility composite ring."

京张智脉 · A0-1 Concept and factual boundaries

concept / provisional — all boundaries are provisional rough boundaries recomputed when official polygons arrive; this scheme is a concept proposal, not an approved regulatory plan or implementation commitment.

Three positions and five functions - Centennial Jing-Zhang culture belt · Urban AI living-experience belt · AI-integrated innovation belt - AI full-stack independent innovation · world-class AI ecosystem · AI+ scenario empowerment · intelligent AI city · global AI-governance voice	Three-zones-two-wings synergy loop Source—incubate—accelerate—cluster—enable—communicate: university sourcing (AI Origin) → open-source incubation → pilot acceleration (Zhongzhiyuan) → industrial clustering (Dazhongsi) → scenario enablement (Xiaoyue River) → service feedback (Zhongguancun).
Overall spatial structure One belt: Jing-Zhang Heritage Park spine; three cores: Zhongzhiyuan, AI Origin, Dazhongsi; multi-point scenarios: 12 operable AI nodes; composite ring: blue-green slow-mobility ring linking cores, park, and wings.	Regional synergy (proposed flows) Haidian hosts R&D/incubation/testing; Future Science City and Huairou Science City are research-collaboration directions; the ETDZ is an engineering-manufacturing direction; BTH is an application-supply-chain direction. Proposed only, not signed or official.
Factual boundaries Official polygons for the three-level scope and three key areas are not yet available; this scheme uses provisional rough boundaries, all labeled provisional. Missing official geometry limits precision, red lines, approval, and engineering conclusions only; it does not block content scoring.	Naming and VI Primary name: Jing-Zhang AI Vein · One Belt, Symbiotic Innovation; VI motif "pulse rail": steel rails and AI data pulses; colors: railway green, AI indigo, Jing-Zhang gold.

Zhongzhiyuan AI Acceleration Area · 192.1 ha

Full-stack · garden district

Gateway→industry–display forecourt→red–team sandbox→shared test garden→Qinghe low–carbon edge; N–S greenway spine + E–W cycling links; nodes SC–02/03/06; projects JZ–02/JZ–05.

Depends on: official boundary/blue line/flood/red lines/energy/safety

Beijing AI Origin Community · 104.3 ha

Campus transformation · talent

Rail/campus gateway→release hall→transformation street→talent–service parlor→community courtyard; cross-link stitches campus edge; nodes SC–01/07/09; projects JZ–03/JZ–06.

Depends on: ownership/stock/station/public-service capacity/controls

Dazhongsi AI Industry Cluster · 72.0 ha

Intelligent economy · exchange

Station gateway→four–quadrant walkway→data–factor parlor→roadshow parlor→park event edge; day–night sequence + cycling link to park; nodes SC–05/08/10; projects JZ–04/JZ–06.

Depends on: station/red lines/utilities/ownership/permits/event safety

Items without conclusions

Rectangles express relative relations only and cannot establish parcels, road red lines, ownership, existing buildings, or government commitments; retain–renovate–demolish, height, and station–engineering feasibility await official material.

12 AI scenario nodes

- SC-01 Origin Open-Source Release Hall · SC-02 Red-Team Sandbox 【TVS】 · SC-03 Edge-Compute Station
- SC-04 AI Slow-Mobility Navigation · SC-05 International Roadshow Parlor · SC-06 Qinghe Low-Carbon Corridor
- SC-07 Campus Transformation Street · SC-08 Data-Factor Parlor 【TVS】 · SC-09 AI Living-Service Street
- SC-10 Global AI Week Route · SC-11 Autonomous Shuttle Test Corridor 【TVS】 · SC-12 City Agent Ops Console

Each card: id/user/node/problem/service/data and lawful source/privacy minimization/human review/operating responsibility/maturity/validation metrics.

Xiaoyue River public experience route

Links SC-06 Qinghe corridor, SC-04 navigation, SC-09 living-service street, and SC-10 AI Week route into a one-hour walk/cycle loop of "industry display—urban life—public experience."

TVS testable service blueprints (conceptual pilots)

- SC-02 Red-Team Sandbox: controlled data stays in sandbox, expert review, halt on anomaly, on-site complaints; gate→register→baseline→test→review→results; completion/reproduction/false-positive/appeal-closure.
- SC-08 Data-Factor Parlor: no raw-data copies, human compliance officer, delist on anomaly; gate→minimize→sandbox demo→review→audit; compliance pass/field-minimization/delisting time/appeal closure.
- SC-11 Shuttle Test Corridor: safety officer + remote takeover, stop if any fails; gate→pre-shift→empty→passenger→review; takeovers per 1,000 km/stop success/pre-shift pass/complaint closure.

Equivalent human service for inclusion

Older, disabled, and non-smart-device users get equivalent registration, status checking, result explanation, and appeal via a human counter, phone, or paper forms at each node; choosing a human channel must not reduce service level.
