

JING-ZHANG / GUEST MODE

Basic public journeys start without a local account. Enhanced identity is an explicit, minimal step. Every gate keeps a visible human path.

- ZERO FIELD
- EDGE / OFFLINE
- HUMAN HANDOVER

Basic public journeys start in guest mode; enhanced services connect identity only at a genuinely necessary step. Each open gate is a contract across space, service and operations.

Seven conceptual zones

Shared edges, recomputable roles, no statutory designation

Seven conceptual zones

shared edges / machine-recomputable roles / no statutory designation

AREA LEDGER		
05		181.3 ha
0702		400.3 ha
0802		115.5 ha
0803		121.3 ha
0804		122.6 ha
1401		200.3 ha
Every polygon is derived from the provisional site boundary. Replace and recalculate when official controls arrive.		

Land-use codes are machine-recomputable functional roles. Official controls are missing, so intensity, redlines and retain-renovate-demolish decisions remain pending.

Three yards

TEST / COMPOSE / DELIVER

Three yards, three validations

TEST -> COMPOSE -> DELIVER

01

ZHONGZHIYUAN / TEST

Test offline

offline model / edge robot / data budget / handover

02

ORIGIN / COMPOSE

Compose for people

paper navigator / local translation / youth workshop

03

DAZHONGSI / DELIVER

Deliver on day one

orient / wayfind / pay / pitch

12 gates / 6 personas / 12 scenarios / 3 industrial tests

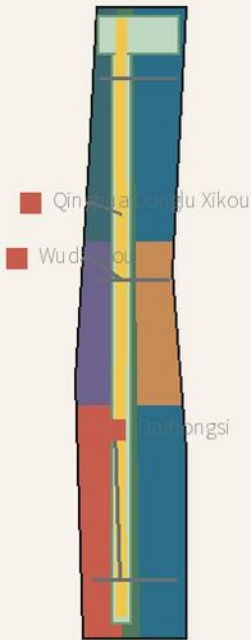

Zhongzhiyuan tests offline operation and minimum data; Origin composes models into usable tasks; Dazhongsi tests first-hour international adoption.

Commons spine and blue-green edges

Station relationships are context; lines are not engineering redlines

Commons spine, gates and blue-green edges

station context is orientation only / all alignments conceptual

OPEN GATE RULE

- 1 / Paper route = screen route
- 2 / Account-free start
- 3 / Edge-first, cloud optional
- 4 / Human path co-located

Paper maps, ground numbering, bilingual text and edge navigation point to one route; the human path remains available when network or power fails.

Metrics and audit

Known, conceptual and target states stay separate

Metric states and the Guest Mode audit

known geometry / provisional context / unknown performance target

FIVE QUESTIONS / 五问

All Guest Mode performance values are currently unknown. The interactive page demonstrates five questions with synthetic scenarios; it is not field performance.
