

--	--	--

ordinary-city baseline → physical repair → optional AI → functioning exit state

Concept proposed = physical proximity is not as effective as social interaction with officials to drive

- No account / no app required
- AI guidance is optional
- Six E&M links are intentions, not read/refine
- Transmit exits, structures and parking await confirmation of data

Concept proposal • design-first • provisional geometry is not an official redline

--	--	--

This table states conceptual quantity bases, roles and maintenance cadence only. Currency budgets, total FTE, procurement entities, insurance contracts and approvals remain UNKNOWN.

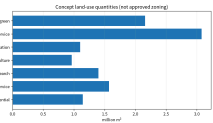

Shared decision gate: PRECONDITION – TEST – RECEIPT – DECISION

```

graph LR
    A["1 Precondition evaluated  
no exception - decision state"] --> B["2 Test condition cancelled  
2a If boundary case cancelled"]
    B --> C["3 Bail / Bail receipt  
no exit receipt - decision state"]
    C --> D["4 GO / FURTHER / STOP  
nothing to receive the STOP"]
    D --> B
    
```

Shared boundary: if reasonable parties, periods, safety, insurance, no clear losses or 50% conditions cannot be verified, the proposal remains a concept proposal, no take budget, partnership or schedule file is gap.

Concept only implementation framework. Provisional geometry is non-official and is not a procurement, approval, contract or construction basis.

- Official parcel size, street key-area polygons
 - Official FM, height, road-milines/heritage / fire / utilities
 - Cleared building, tenure, household and service-capacity survey
 - Verified road-widths, parking, transit interfaces and engineering constraints
- Localisation triggers: when official geometry or key-controls arrive, reassemble land use, building foots, green/civic space, shading, metrics, drawings and IFM...

Concept proposed • provisional geometry based on official outline • consolidated when official data arrives

Concept proposal • design-first • provisional geometry is not an official redline
