

Jingmai Meridian

Urban Design for the Centennial Jing-Zhang AI Innovation Belt

One Meridian, Dual Axes, Three Cores, Nine Nodes

Core Design Concept

Meridian / Soul / Network / Body

Meridian

Jing-Zhang cultural spine, 9 km north-south,
linking 1909/1988/2026 strata.

Soul

117-year self-reliance lineage: engineering
-> industrial -> intelligent.

Network

Civic-agent meridian:
acupoint-meridian-organ paradigm, distinct
from Smart Nation.

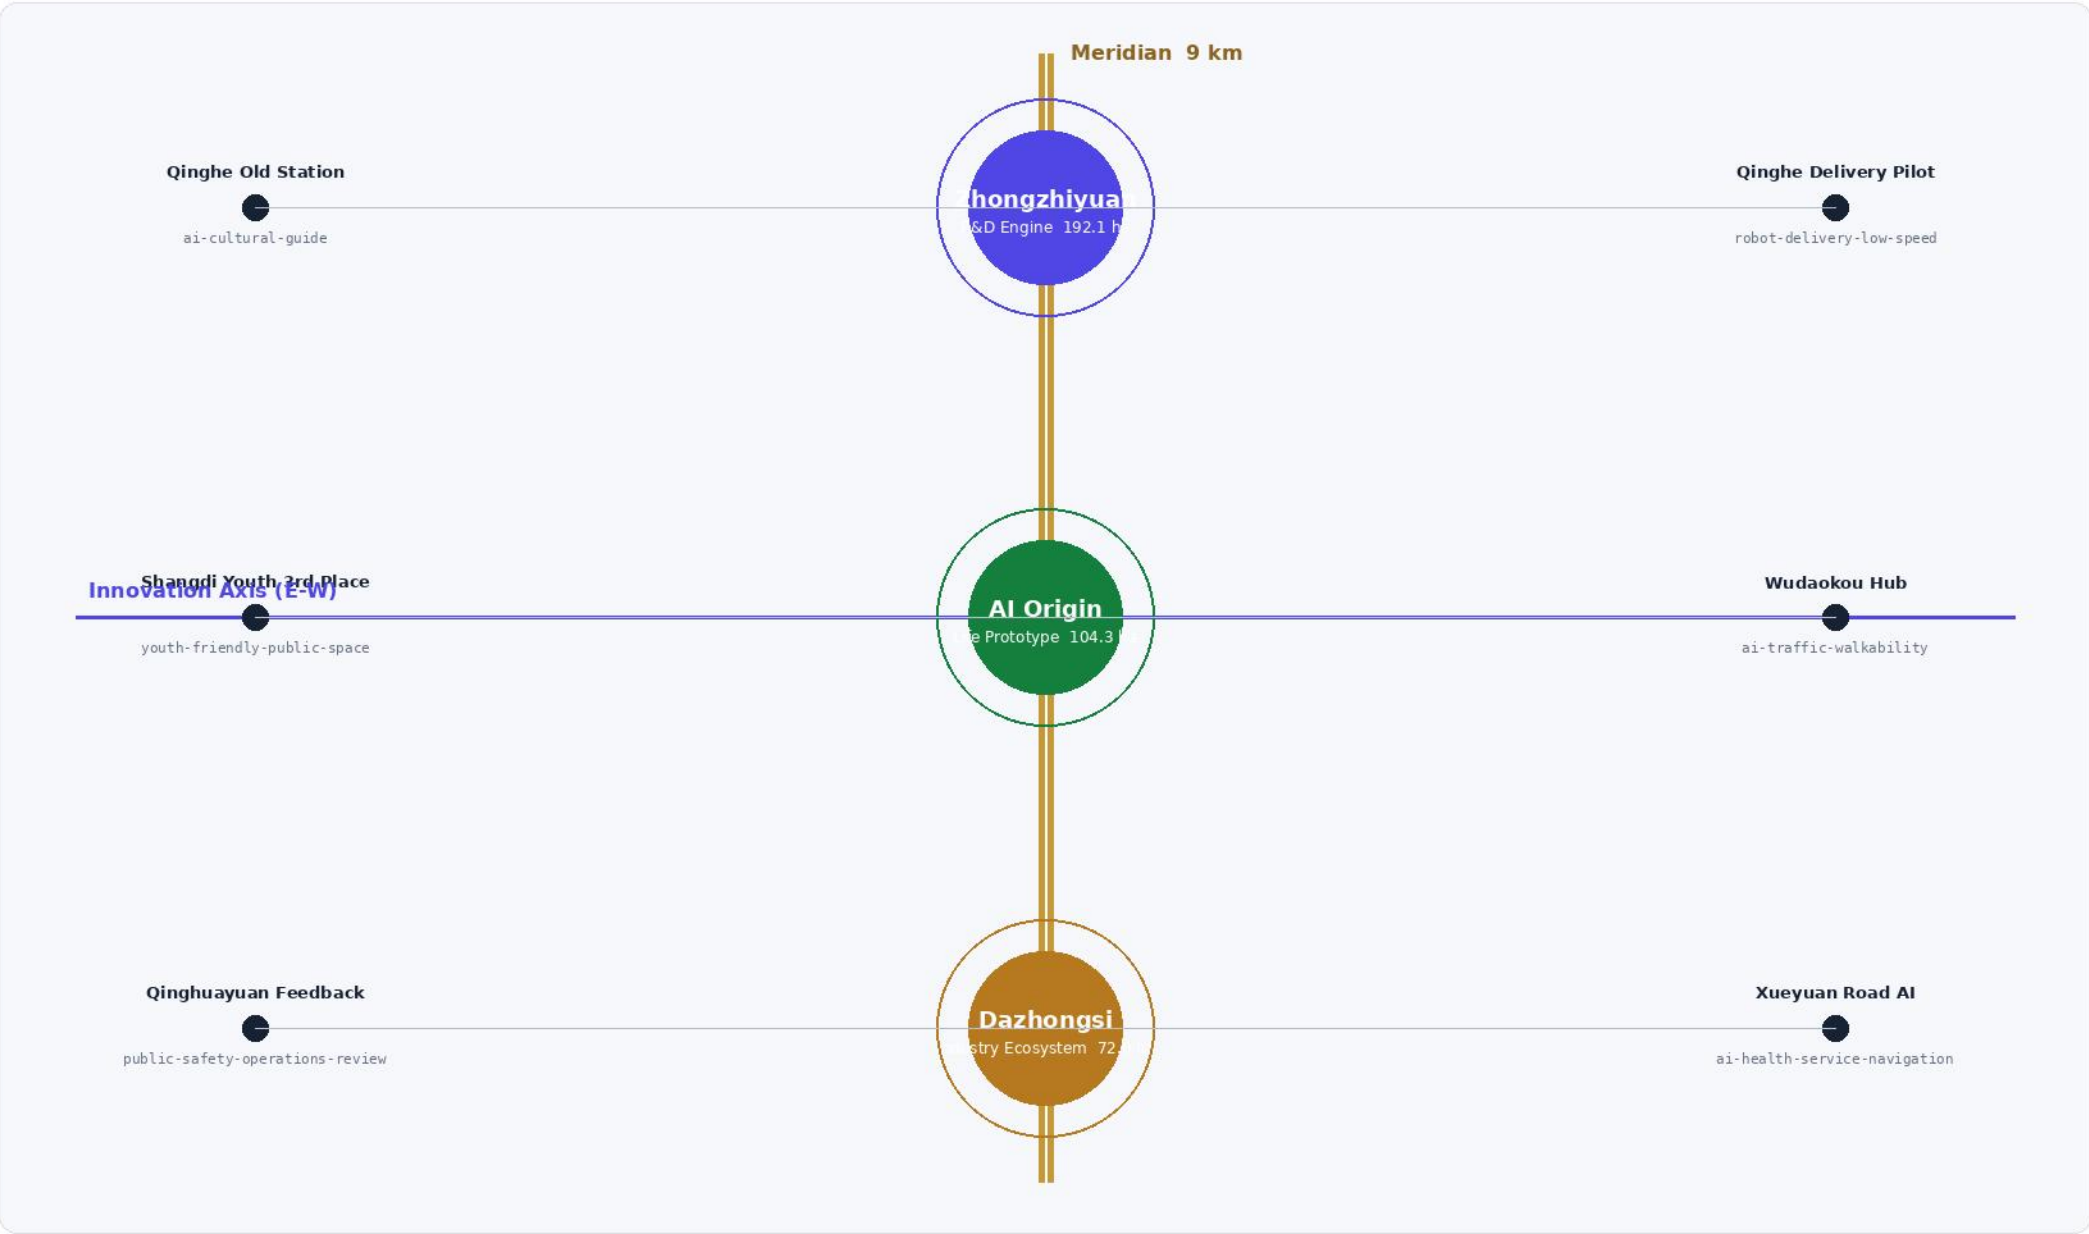

Body

Co-governed living city: Party-building
guidance, government implementation,
public participation.

Four pillars structurally fuse: traditional culture (systems view), Party-building (self-reliance depth), international design (dual-axis multi-core), domestic references (heritage + co-governance).

Spatial Structure

One Meridian, Dual Axes, Three Cores, Nine Nodes

Three Key Areas

Differentiated positioning, shared four interfaces

Zhongzhiyuan AI Acceleration

R&D Engine Type | 192.1 ha | FAR 3.0-4.0

- National AI platform, full-stack innovation, standards
- R&D clusters, low-carbon computing center, governance hall
- Retain existing R&D, renovate low-efficiency parks, new landmark towers
- Scenario: enterprise-service-copilot

Beijing AI Origin Community

Life Prototype Type | 104.3 ha | FAR 1.5-2.5

- Near-campus innovation, incubation, talent zone, open-source
- Campus-park-street stitching, open-source release hall, talent stations
- Retain residential core, renovate ground floors, limited new apartments
- Scenario: ai-health-service-navigation + youth public space

Dazhongsi AI Industry Cluster

Industry Ecosystem Type | 72.0 ha | FAR 2.0-3.0

- Leading enterprises, agents, smart terminals, data factors
- International roadshow parlor, terminal display belt, 4-quadrant walk
- Renovate commercial, integrate intersection quadrants, landmark towers
- Scenario: industry-ecosystem-agent

Shared four interfaces: R&D (universities + open-source), Display (open testing + public experience), Service (talent + enterprise + public), Incubation (conversion + start-ups). Each core hosts one civic-agent acupoint.

Core Metrics Dashboard

Spatial / Transport / AI / Governance

site_area_sqm

11.4 km2

Overall Design Area

coordinated_research_area_sqm

43.6 km2

Coordinated Research Area

key_detailed_design_area_sqm

3.684 km2

Key Area (3 cores)

green_ratio

30%

G 15% + E 15%

walkability_network_density

9.0

km/km2 target 8-10

transit_coverage_800m

>=80%

Rail 800m coverage

barrier_free_coverage

100%

Accessibility coverage

blue_green_network_density

>=3.0

km/km2 blue-green

cultural_axis_length_m

9 km

Jing-Zhang cultural spine

per_capita_park_green_sqm

>=15

m2/person per-capita park

sponge_city_rate

>=70%

Sponge city compliance

scenario_count

8

AI scenarios

node_count

9

Nine nodes

meridian_connectivity

100%

Meridian connectivity

governance_loop_coverage

100%

5-step loop coverage

party_leadership_coverage

100%

Party-building guidance

human_review_coverage

100%

Human review coverage

public_participation_channels

>=9

Public participation channels

phasing_period_count

4

Phasing periods

floor_area_ratio

unknown

Official FAR pending | concept 1.5-4.0

building_height_m

unknown

Height control pending | concept 18-50m

building_footprint_area_sqm

111954

m2 building footprint

floor_area_ratio / building_height_m = unknown: official regulatory-plan controls not yet released. Conceptual targets only (FAR 1.5-4.0, height 18-50m). All metrics are target-value statements.

Phasing Implementation

Four phases over 8+ years

Phase 1

0-2 years

Pilot Period

Qinghuayuan feedback station + Qinghe delivery pilot + old Jing-Zhang corridor demo. Validate 5-step loop and AI scenario mechanisms.

Phase 2

2-5 years

Three-Core Period

Three cores take differentiated shape: Zhongzhiyuan R&D engine, AI Origin life prototype, Dazhongsi industry cluster form and interlock.

Phase 3

5-8 years

Nine-Node Period

Nine nodes interlink, meridian through-connected, AI scenarios move from pilot to routine operation.

Phase 4

8+ years

Evolution Period

Civic agent self-learns and self-evolves, urban-governance knowledge base settles into long-term brand asset.

Phasing timeline is a conceptual recommendation, not a confirmed implementation schedule. Actual timing must follow official approval and implementation conditions.
