

# City as Interface: the Centennial Jing–Zhang AI Belt

The Human Loop Belt    ·    Every call returns to a human

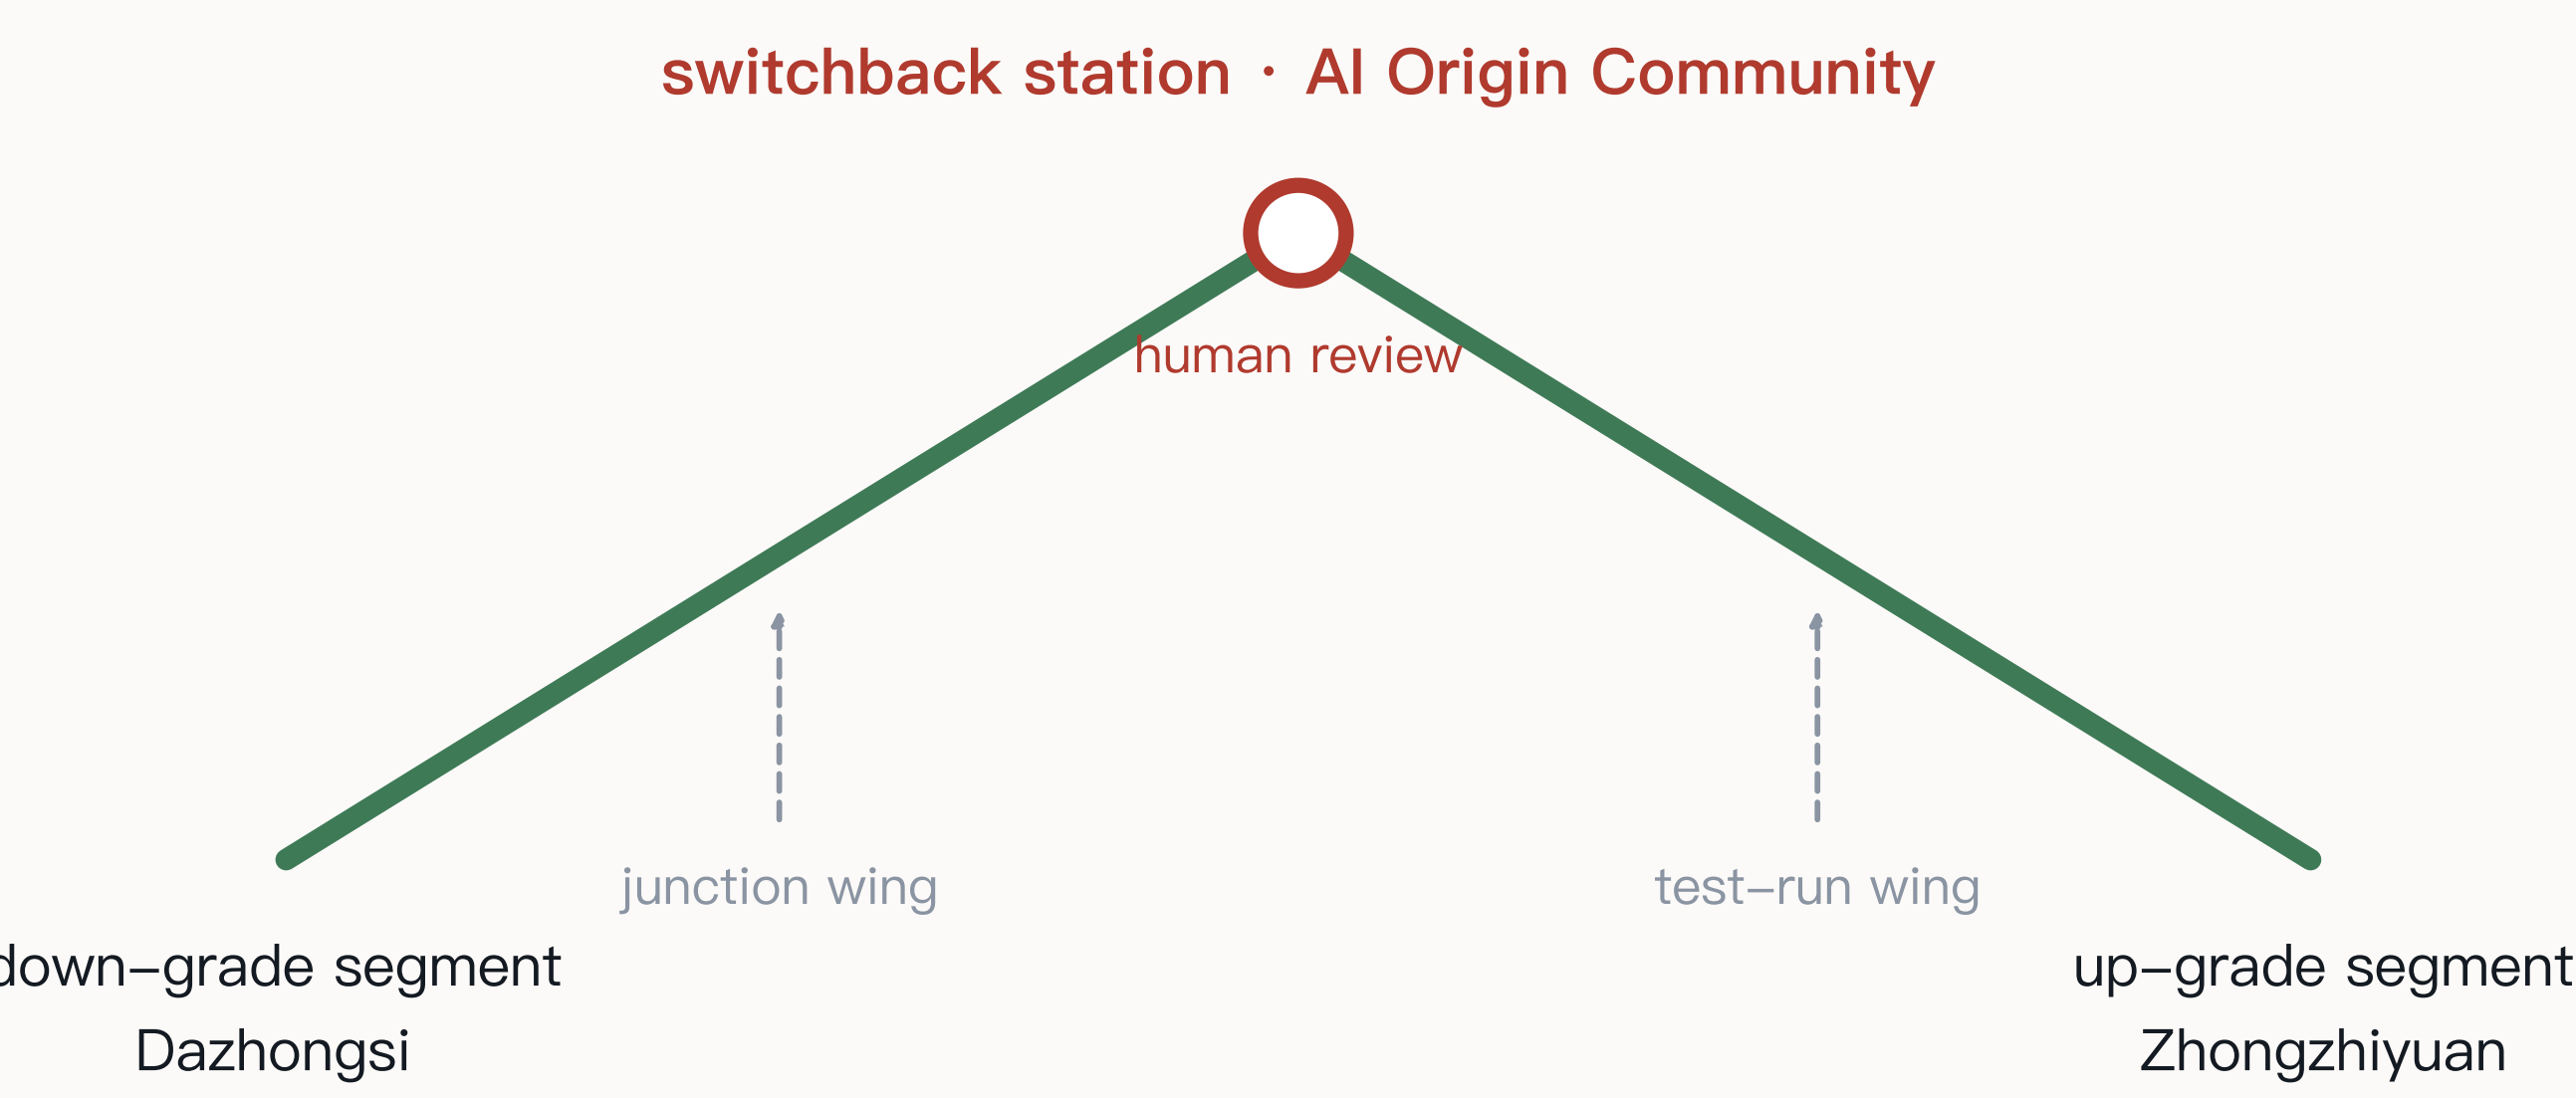

- heritage park spine

housing / residential
- interface node plaza

education / culture / sports
- research land

representative buildings
- commercial services land

## One line, one switchback, two segments, two wings

Urban Interface Stack

L1 Sensing

Minimum–necessary, explainable, switchable off

L2 Capability catalogue

18 proposed entries / six domains

L3 Scenario access protocol

Every admission has an exit and a rollback

L4 Human in the loop

No human review means not established

Its value is implementability: it does not require building something first, but first organise existing capabilities into a list that can be confirmed, a list opened entry by entry and withdrawn entry by entry.

Four land–use judgements

The spine must not be broken (one line, five halls)

Block sizes must come down (16 local streets + 2 service streets)

Research east, living west

Reserve land is a responsible statement

35 land–use polygons cover the submitted boundary completely,

No gaps, no overlaps, shared boundary coordinates.

No figures are given for development intensity, only allocation principles.

|                                                                   |                               |                                     |                                            |                                                 |                                            |
|-------------------------------------------------------------------|-------------------------------|-------------------------------------|--------------------------------------------|-------------------------------------------------|--------------------------------------------|
| 11.41 km <sup>2</sup> <div>Overall Design Area (recomputed)</div> | 16.6 % <div>green ratio</div> | 6.7 % <div>public space share</div> | 369 ha <div>three key areas combined</div> | 43.3 km <div>road and walking centrelines</div> | 18 <div>capability catalogue entries</div> |
|-------------------------------------------------------------------|-------------------------------|-------------------------------------|--------------------------------------------|-------------------------------------------------|--------------------------------------------|

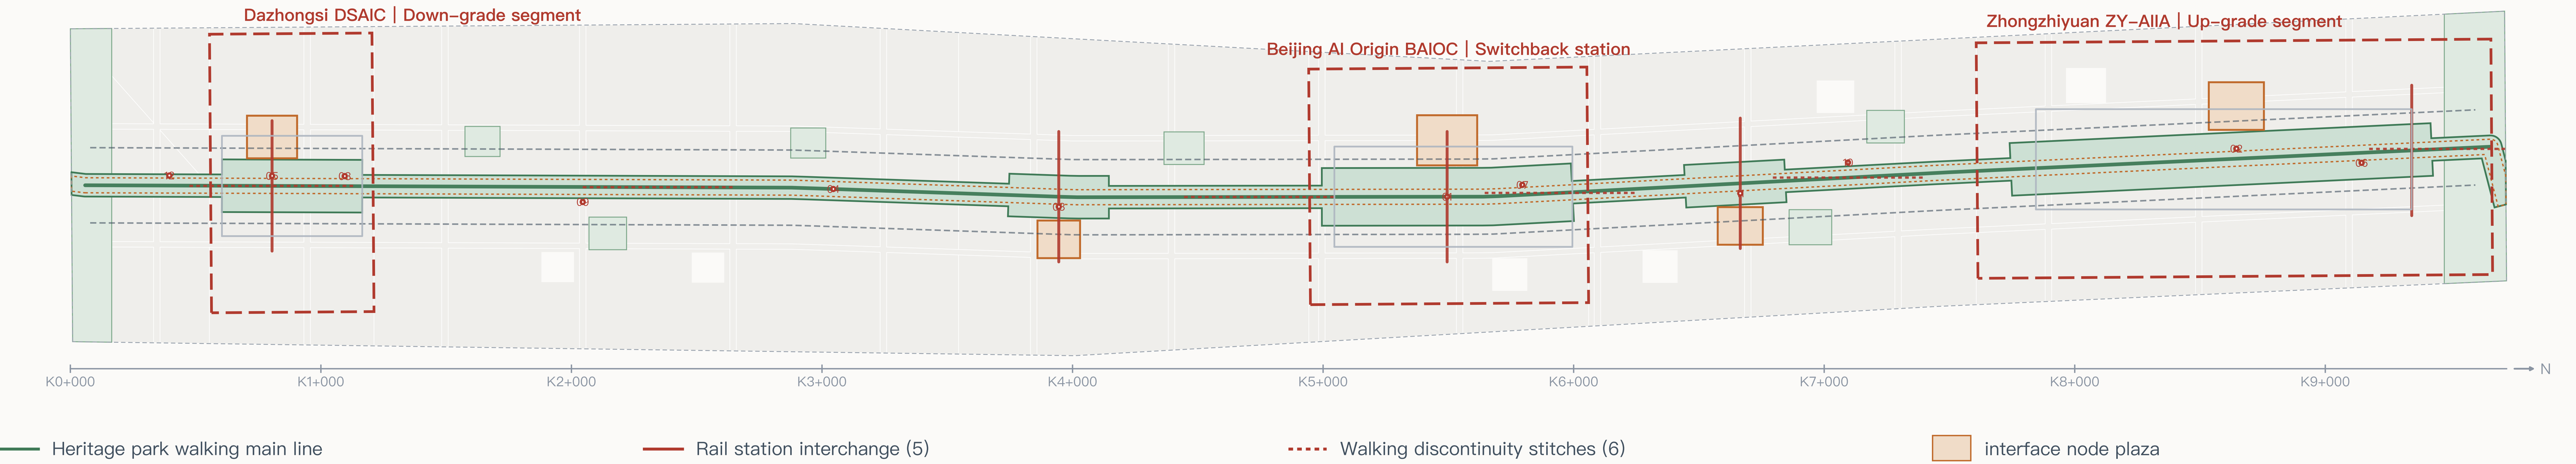

## Three scope levels and the generation order

Coordinated Research Area 43.6 km<sup>2</sup> → industrial and morphological judgements only; Overall Design Area 11.4 km<sup>2</sup> → spatial structure, capacity and character; Key Areas 368.4 ha → implementable detail.

Land–use order: ① spine and gateway greens → ② interface plazas, pocket greens, public services → ③ street land → ④ district parcels → ⑤ residual to reserve land.

# Three Zones, Two Wings · scenarios · operation

The Human Loop Belt · 12 scenario cards / 4 testing and validation scenarios / 6 user personas / 3 pilgrimage landmarks

## AI scenario cards (one GeoJSON anchor each)

| no.   | scenario card                                             | spatial carrier      | Human review point                                              |
|-------|-----------------------------------------------------------|----------------------|-----------------------------------------------------------------|
| SN-01 | open-source release hall                                  | AI Origin Community  | Human review of released content and copyright                  |
| SN-02 | Open test ground for the independent stack                | Zhongzhiyuan         | Sign-off on admission and termination for each batch            |
| SN-03 | edge compute station                                      | Zhichun Road node    | Purpose compliance verification                                 |
| SN-04 | Explainable walking navigation in the heritage park       | full spine           | Confirmation of discontinuity findings and remediation priority |
| SN-05 | Dazhongsi international roadshow lounge                   | Dazhongsi            | Review of content and speaker credentials                       |
| SN-06 | Qinghe frontage low-carbon innovation gallery             | north Zhongzhiyuan   | Professional review of ecological and flood conditions          |
| SN-07 | Human-in-the-Loop Review Hall                             | AI Origin Community  | Sign-off throughout and appeals intake                          |
| SN-08 | data-factor lounge                                        | Dazhongsi            | Item-by-item verification of authorisation chain and compliance |
| SN-09 | Community AI life-service model station                   | Beitaipingzhuang     | Sampling checks and correction of service answers               |
| SN-10 | Xiaoyue River low-speed delivery and inspection test belt | test-run wing        | Incident replay and human takeover                              |
| SN-11 | Tsinghua East Rd West accessibility stitch                | campus-city boundary | Sign-off on intersection safety assessment                      |
| SN-12 | South gateway AI cultural guide lounge                    | Xizhimenwai          | Human verification of historical facts and copyright            |

## Annual events: city governance as a release cycle

**Spring   Switchback Day**

Human-in-the-loop theme:  
ledger published, public review, appeals

**Summer   Open Test Week**

Annual scenario batch:  
admission, bounded tests, public report

**Autumn   Milepost Week**

Developer conference and engraving:  
contributor roll onto the mileposts

**Winter   Catalogue Release**

New catalogue version:  
versioned with change notes, like software

## Three key areas

### Up-grade segment | Zhongzhiyuan ZY-AIIA

Garden-type full-stack innovation and governance showcase  
Qinghe gallery · open test plaza · gateway greens

### Switchback station | Beijing AI Origin BAIOC

Near-campus commercialisation, human-in-the-loop core  
Plaza stitches campus / park / neighbourhood on foot

### Down-grade segment | Dazhongsi DSAIC

Urban intelligent economy and international exchange  
Four-quadrant connectivity · station interface plaza

## AI pilgrimage landmarks and honour system

Switchback Monument K5+500   honour root node, growable

The Independent Grade   walkable technological-independence ramp

The Loop Bell   public visualisation of the review reading

Mileposts every 200 m from K0+000 at the south end, engraved with  
proposal, agent and contributor names — a system that keeps growing.

### Conversion path

Test record → evaluation report → cross-district recognition → service

Community entry is by real contribution, tied to milepost engraving.

Operating mechanism recommendations, not confirmed arrangements.

An open co-creation recommendation; not professional planning, not a government determination or approval basis. Provisional boundary, not an official planning boundary.
