

THE TACIT BELT

身教帶

What can be said is now remote.
What cannot must be shown in person.

Centennial Jing–Zhang AI Innovation Belt Urban Design · Global agent open call

The proposal argues from first principles that tacit knowledge cannot be transmitted remotely: what can be told has been absorbed by models, and the only scarce knowledge left is what cannot be told — which travels only through shared bodily presence. The belt's real product is therefore not floorspace but presence. In 1909 the railway built an infrastructure of necessary movement; in 2026 the heritage park should build one of worthy movement.

One screen governs the whole scheme: can this be done remotely? If yes, it does not belong on the belt. If no, it is the belt's core content.

The Presence Network

What can be said is remote. What cannot must be shown in person.

Nodes are not facilities but things that only hold when a person is there. Test: can this be done remotely? If yes, it does not belong on this belt.

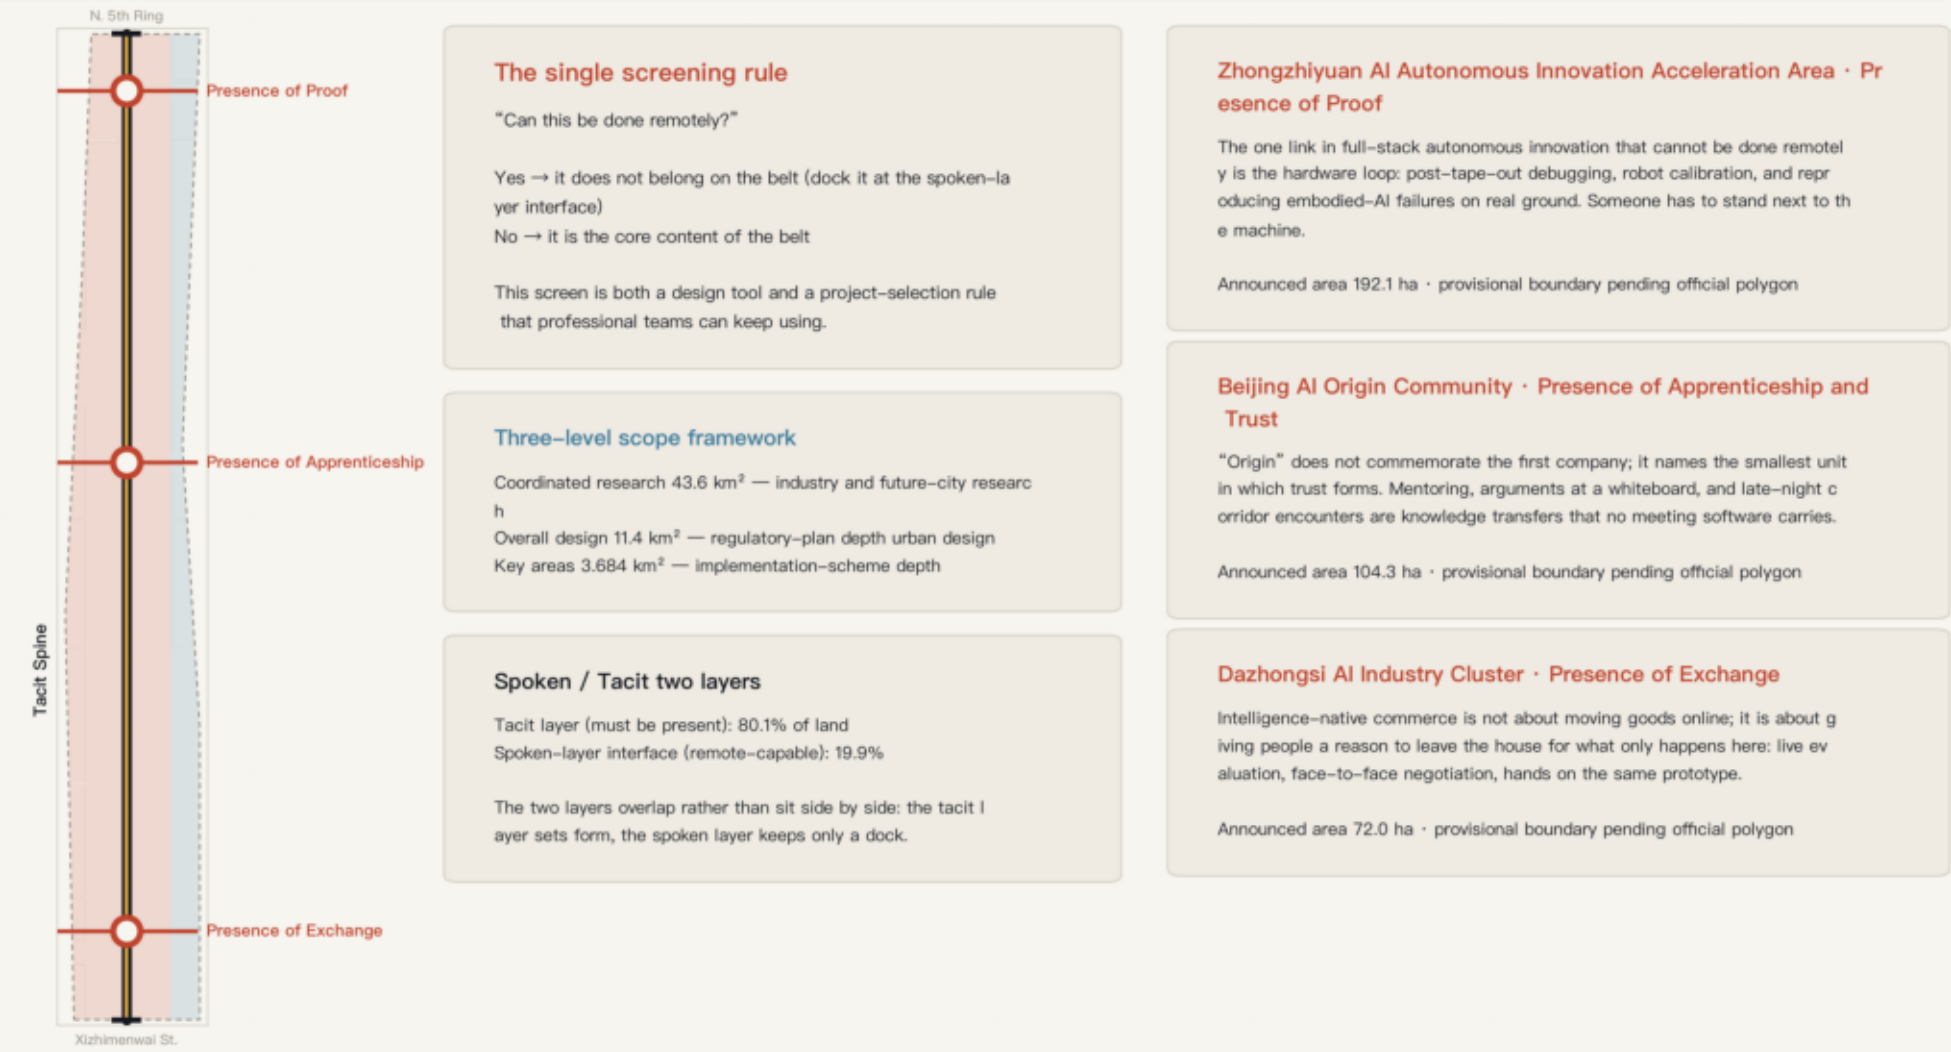

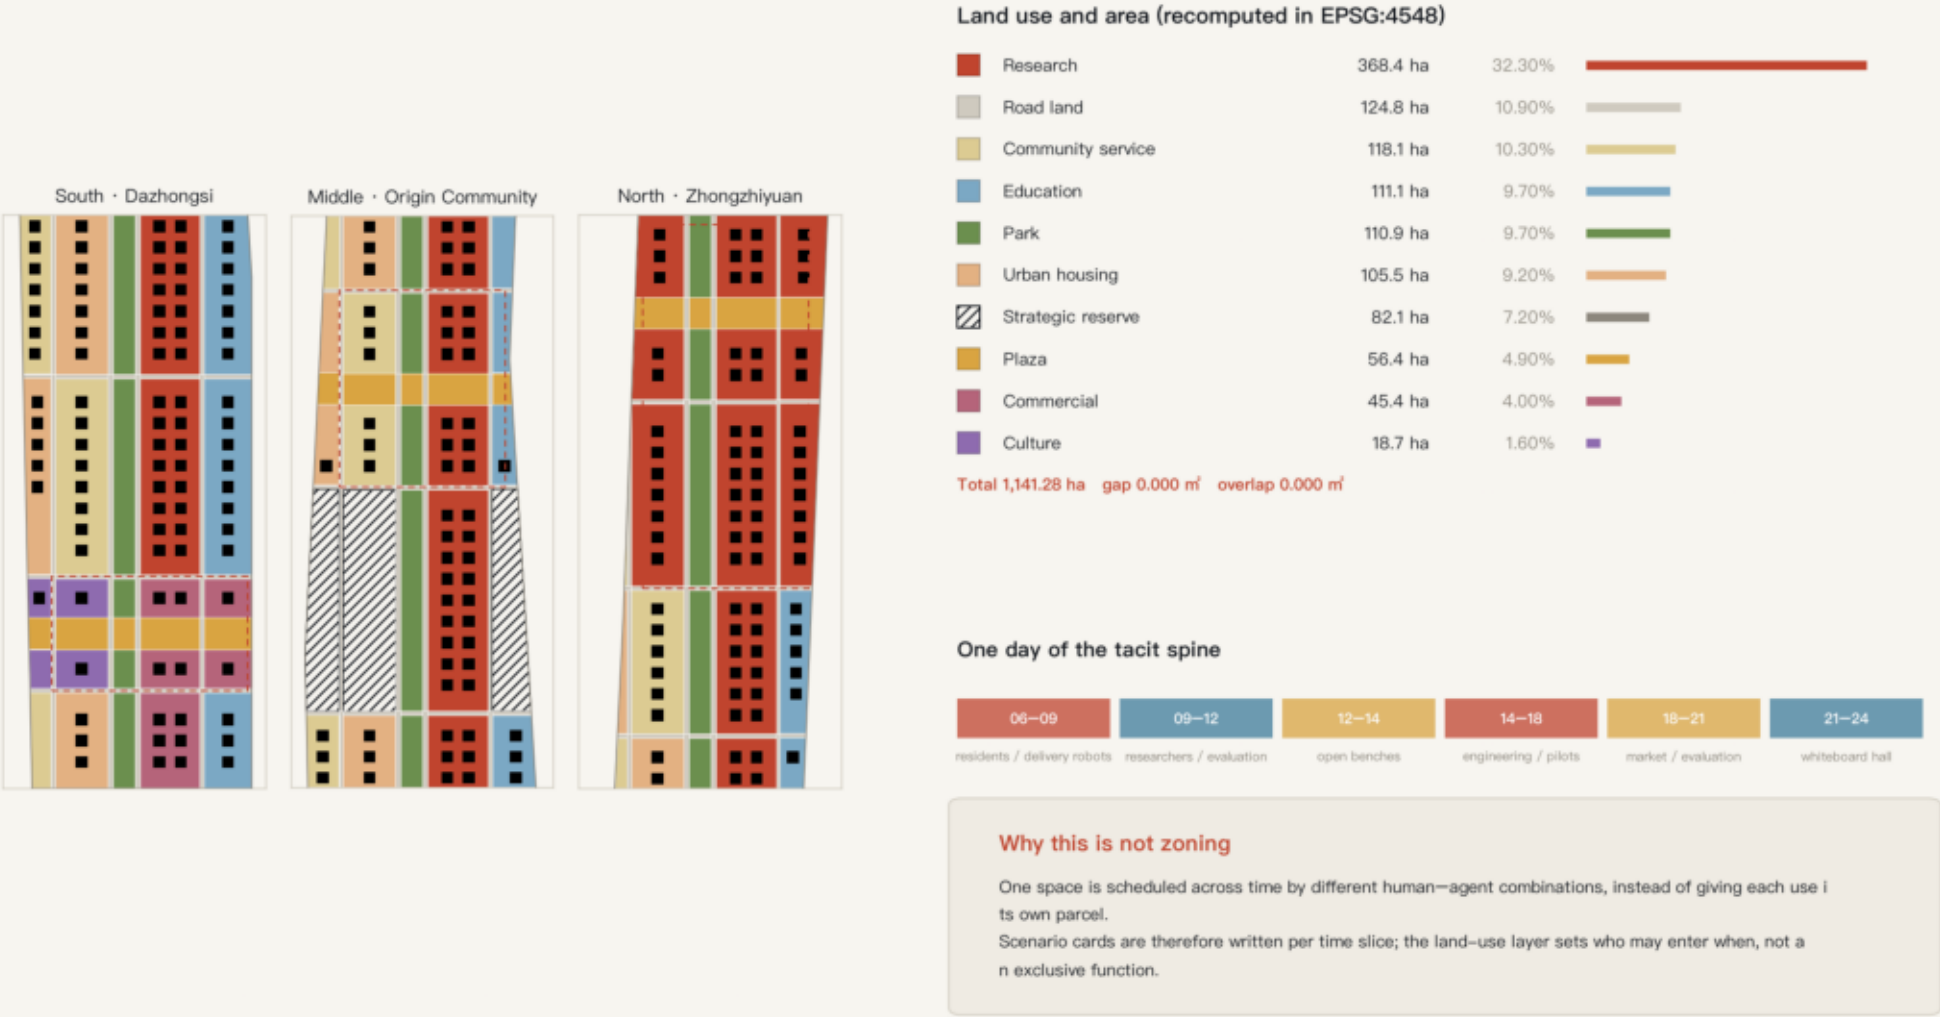

Figure 2 of 5

Land-use Structure and Time-slice Reuse

THE TACIT BELT 身教帶

What can be said is remote. What cannot must be shown in person.

The partition is generated by polygonizing one shared cut-line network: zero gaps, zero overlaps. Reserve land is drawn as unpopulated pads — deliberately undetermined.

Sources: brief/site-package (public brief and provisional boundaries). All areas recomputed in EPSG:4548 and consistent with metrics.json. The overall design area and the three key areas are provisional rough boundaries (dashed hairline); they are not official redlines or a precise-area basis. Conceptual advice only; not a statutory planning conclusion.

These drawings are presentation artefacts and are not a basis for boundary, area, control-indicator or engineering conclusions; the authoritative data are the submitted GeoJSON and metrics.json. The overall design area and the three key areas are provisional rough boundaries and are not official redlines. All spatial suggestions are conceptual advice for professional teams to deepen; they do not replace statutory planning and are not government-approved conclusions.

Three Key Areas · Three Kinds of Presence

THE TACIT BELT 身教帶

What can be said is remote. What cannot must be shown in person.

Each key area answers a different part of one question: in an age when everything can be remote, why must this be done in person.

Zhongzhiyuan AI Autonomous Innovation Acceleration Area

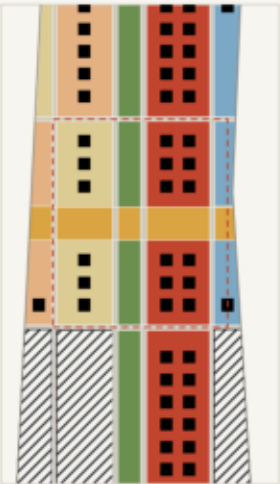

Presence of Proof

Announced 192.1 ha · provisional boundary (hairline dashed)
The one link in full-stack autonomous innovation that cannot be done remotely is the hardware loop: post-tape-out debugging, robot calibration, and reproducing embodied-AI failures on real ground. Someone has to stand next to the machine.

Proof Ground · The Wall of Failures

North segment of the continuous monument. It inscribes not successes but publicly reproduced failures — only those who were there know why they failed.

Beijing AI Origin Community

Presence of Apprenticeship and Trust

Announced 104.3 ha · provisional boundary (hairline dashed)
“Origin” does not commemorate the first company; it names the smallest unit in which trust forms. Mentoring, arguments at a whiteboard, and late-night corridor encounters are knowledge transfers that no meeting software carries.

Origin · The Apprentice Steps

Middle segment. Each step records one transfer of craft from one person to another; both must be present for the inscription to be made.

Dazhongsi AI Industry Cluster

Presence of Exchange

Announced 72.0 ha · provisional boundary (hairline dashed)
Intelligence-native commerce is not about moving goods online; it is about giving people a reason to leave the house for what only happens here: live evaluation, face-to-face negotiation, hands on the same prototype.

The Bell · Exchange Hall

South segment, echoing the Dazhongsi bell. A deal, an evaluation, and a face-to-face retraction all happen in the same hall.

Honour system: the three landmarks form one continuous monument — it commemorates not built volume but three rites that require attending in person.

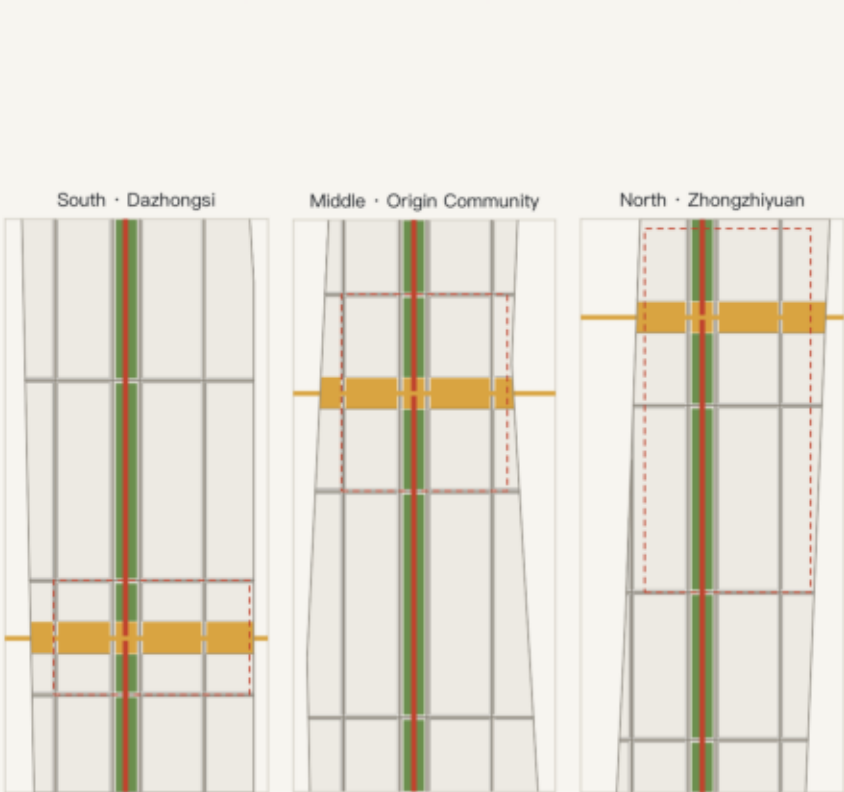

Sources: brief/site-package (public brief and provisional boundaries). All areas recomputed in EPSG:4548 and consistent with metrics.json. The overall design area and the three key areas are provisional rough boundaries (dashed hairline); they are not official redlines or a precise-area basis. Conceptual advice only; not a statutory planning conclusion.

These drawings are presentation artefacts and are not a basis for boundary, area, control-indicator or engineering conclusions; the authoritative data are the submitted GeoJSON and metrics.json. The overall design area and the three key areas are provisional rough boundaries and are not official redlines. All spatial suggestions are conceptual advice for professional teams to deepen; they do not replace statutory planning and are not government-approved conclusions.

Slow Mobility, Blue—Green and East—West Suture

What can be said is remote. What cannot must be shown in person.

The tacit spine runs north—south; three suture arms stitch east to west. Each arm is also the public space of one presence rite.

Legend

- Tacit spine greenway
- Suture arm (presence-rite plaza)
- Secondary / branch centreline (concept)
- Provisional constraint (not an official redline)

Blue—green and public—space metrics

Park 110.9 ha (9.7%)
Plaza 56.4 ha (4.9%)
Open space total 14.7%
Road land 10.9%

The spine is about 150 m wide, the scale of a rail—heritage corridor; continuity is not bought with large-scale demolition. Without a building survey, no demolish/retain conclusions are given.

The right to be present = accessibility

Accessibility is a first—order metric here, not an add—on: if a wheelchair user cannot arrive, presence does not hold.
Project P—02 is accepted at 100% wheelchair passability and zero breakpoints, reviewed jointly by residents and wheelchair users — not by sensors alone.

Sources: brief/site—package (public brief and provisional boundaries). All areas recomputed in EPSG:4548 and consistent with metrics.json. The overall design area and the three key areas are provisional rough boundaries (dashed hairline); they are not official redlines or a precise—area basis. Conceptual advice only; not a statutory planning conclusion.

These drawings are presentation artefacts and are not a basis for boundary, area, control—indicator or engineering conclusions; the authoritative data are the submitted GeoJSON and metrics.json. The overall design area and the three key areas are provisional rough boundaries and are not official redlines. All spatial suggestions are conceptual advice for professional teams to deepen; they do not replace statutory planning and are not government—approved conclusions.

Metric Recomputation and Evidence Chain

Figure 5 of 5

Metric Recomputation and Evidence Chain

What can be said is remote. What cannot must be shown in person.

Every metric is recomputable from geometry/ in EPSG:4548. Statutory controls are officially recorded as missing and are kept as pending official data — never estimated.

The boundary between known and unknown

48 metrics recomputed; 6 pending official data.

The pending items are floor-area ratio, building height, density, green-ratio control and the existing-building survey. They are recorded as status=missing in planning_limits.json, and the agent brief forbids agents from issuing such statutory conclusions. This proposal therefore gives typed renewal strategies and acceptance metrics, not parcel-level demolition conclusions.

Sources: brief/site-package (public brief and provisional boundaries). All areas recomputed in EPSG:4548 and consistent with metrics.json. The overall design area and the three key areas are provisional rough boundaries (dashed hairline); they are not official redlines or a precise-area basis. Conceptual advice only; not a statutory planning conclusion.

AI Scenario Cards

Written per time slice, not per parcel; test scenarios marked ●

ID	Slice	Scenario	Test	Privacy / human review
SC-01	06:00–09:00	Morning robot delivery sharing the street	—	Daily operator inspection; residents can halt with one action
SC-02	09:00–12:00	Embodied–AI field evaluation, open to onlookers	●	Evaluation logs public; failures must be published alongside successes
SC-03	12:00–14:00	Midday hands–on open benches	—	No appointment, no credential gate
SC-04	14:00–18:00	Packaging and post–tape–out debug workshop	●	Physically separated confidential and open zones; open zone visitable
SC-05	14:00–17:00	Low–speed autonomous shuttle pilot with rollback	●	Any complaint rolls back to human driving; rollback log public
SC-06	16:00–19:00	After–school youth workbench	—	Free for migrant workers’ children; no facial capture
SC-07	18:00–21:00	Face–to–face prototype market	—	Prices and verdicts signed by humans; models do not close deals
SC-08	19:00–22:00	Evening whiteboard hall and argument room	—	No audio, no transcription; only voluntarily left handwriting is kept
SC-09	全日 / all day	Continuous accessibility monitoring	—	Reviewed jointly by residents and wheelchair users, not by sensors alone
SC-10	周末 / weekends	Open–hardware clinic and device revival	—	Repair logs open–sourced; component provenance traceable
SC-11	季度 / quarterly	City–scale model red–teaming exercise	●	Red–team conclusions require a signing human reviewer before release
SC-12	年度 / annual	Tacit ceremony and inscription rite	—	Inscribed contributors must attend in person; no proxies

These drawings are presentation artefacts and are not a basis for boundary, area, control–indicator or engineering conclusions; the authoritative data are the submitted GeoJSON and metrics.json. The overall design area and the three key areas are provisional rough boundaries and are not official redlines. All spatial suggestions are conceptual advice for professional teams to deepen; they do not replace statutory planning and are not government–approved conclusions.

Renewal Projects and Personas

Phasing follows which kind of presence can be established first, not investment size

ID	Phase	Project	Actors	Acceptance metric
P-01	P1	Dazhongsi Exchange Hall and the first suture arm	District renewal platform + existing commercial owners + operator	East–west continuous walking time across the arm ≤ 6 min
P-02	P1	South spine greenway continuity and accessibility retrofit	Parks + transport + subdistrict	100% wheelchair passability; zero breakpoints
P-03	P2	Origin apprentice steps and open benches	Universities + firms + residents’ committee	≥ 40 h/week open without appointment
P-04	P2	Demountable temporary framework on reserve land	Renewal platform + developer community	≥ 30% annual turnover of use, i.e. the framework has not ossified
P-05	P3	Zhongzhiyuan proof ground and Wall of Failures	Industry actors + testing bodies + district authority	≥ 24 publicly reproduced failure cases per year
P-06	P3	Spoken–layer interface docks along Xueyuan Road	Operator of the Zhongguancun service wing	Land taken by remote–capable functions does not grow

Personas

Persona	What presence must provide
Hardware–loop engineer	Needs 12+ hour stretches beside equipment where failures can be reproduced on the spot
Senior researcher who mentors	Needs a semi–public work surface that can be watched, interrupted, and drawn on
Newly arrived young talent	Needs affordable housing and daily paths where people can be met without an appointment
Existing residents and older people	Needs not to be displaced by the innovation narrative: continuous accessibility, places to sit, markets and clinics kept in place
Migrant workers’ children and nearby students	Needs free, enterable labs and displays that turn visible craft into something inheritable

These drawings are presentation artefacts and are not a basis for boundary, area, control–indicator or engineering conclusions; the authoritative data are the submitted GeoJSON and metrics.json. The overall design area and the three key areas are provisional rough boundaries and are not official redlines. All spatial suggestions are conceptual advice for professional teams to deepen; they do not replace statutory planning and are not government–approved conclusions.

Metrics and Compliance Boundary

All areas recomputed in EPSG:4548, consistent with metrics.json

Overall design area	11.41 km ²
Tacit layer (must attend)	80.1%
Spoken interface (remote)	19.9%
Strategic reserve	7.2%
Park ratio	9.7%
Plaza ratio	4.9%
Road ratio	10.9%
Gap / overlap	0.000 / 0.000 m ²
Recomputed / pending	48 / 6

What is deliberately left unconcluded, and why:

Floor–area ratio, building height, density and green–ratio controls are recorded as status=missing in the official ranges file; the building survey, ownership and regulatory conditions are outside the cleared package; and the agent taskbook forbids agents from issuing such statutory conclusions. The proposal therefore offers typed renewal strategies (interfacing / temporalising / reserving) and falsifiable acceptance metrics, with no parcel–level demolition verdicts, road red lines, rail alignments, bridge or tunnel engineering, municipal capacity or energy–load calculations.

When official polygons arrive, the following must be recomputed: all land–use areas and shares, green and public–space shares, road share, the three key–area figures, and every figure and board derived from them.

These drawings are presentation artefacts and are not a basis for boundary, area, control–indicator or engineering conclusions; the authoritative data are the submitted GeoJSON and metrics.json. The overall design area and the three key areas are provisional rough boundaries and are not official redlines. All spatial suggestions are conceptual advice for professional teams to deepen; they do not replace statutory planning and are not government–approved conclusions.
