

Jingzhang AI Commons | North-up spatial overview

Submitted provisional boundary and design layers; no official redline or existing-parcel claim.

Spatial relations derive from submitted GeoJSON. Provisional boundary is for conceptual review only, not an official redline.

Spatial strategy

Use public heritage space to organize open innovation, not to create a statutory boundary.
The three areas coordinate research/governance, near-campus transfer and station-city showcase.
Repair walking, public interfaces and low-disturbance connections before professionally verified renewal.

Land-use structure | Derived from one submitted boundary

North-up design layers; statutory controls and exact parcels remain pending.

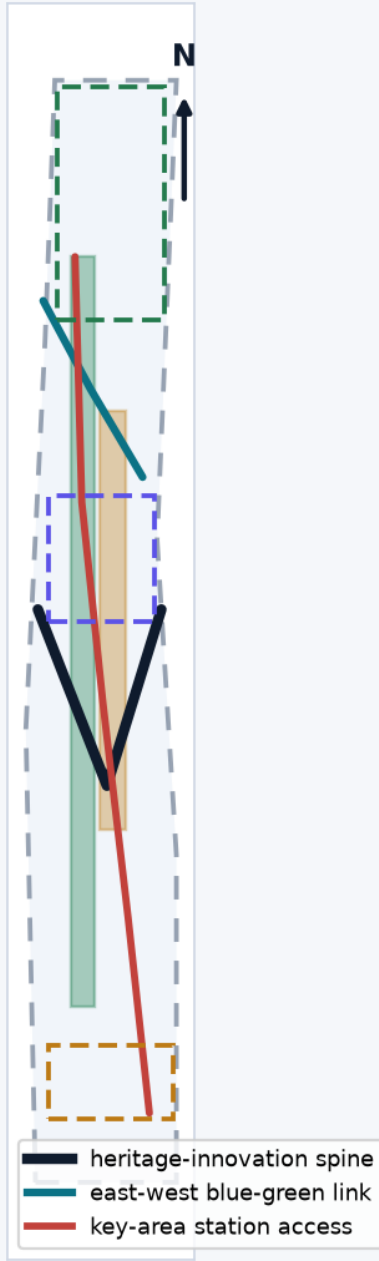

Spatial relations derive from submitted GeoJSON. Provisional boundary is for conceptual review only, not an official redline.

Structure

- Research + Industry**
Collaboration and conversion without pre-setting development intensity.
- Blue-green**
Walking, stormwater, staying and daily public exchange.
- Community support**
Talent-life services tied to walkable public nodes.

Mobility and blue-green network | Concept lines

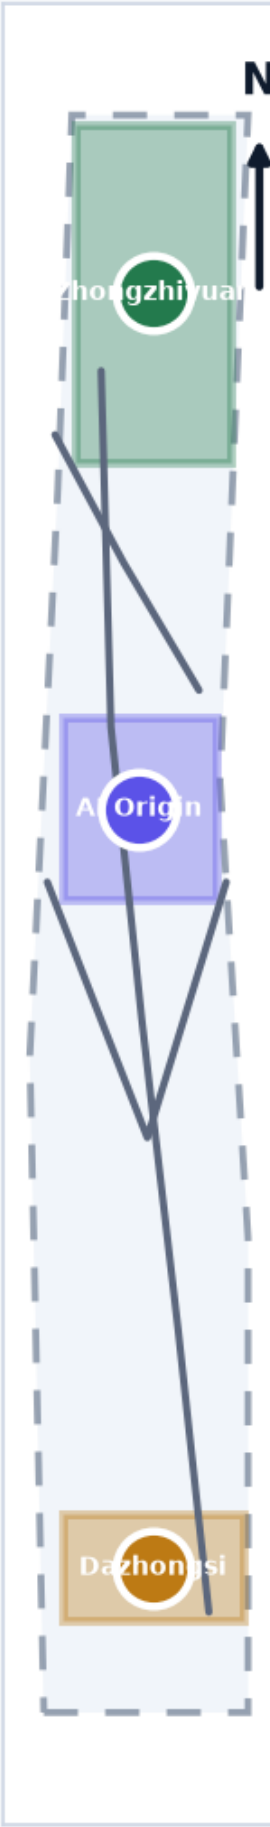

Submitted design layers, not existing road redlines, engineering sections or approvals.

Spatial relations derive from submitted GeoJSON. Provisional boundary is for conceptual review only, not an official redline.

Three key areas | North-to-south implementation units

Provisional polygons retain geographic relative position only.

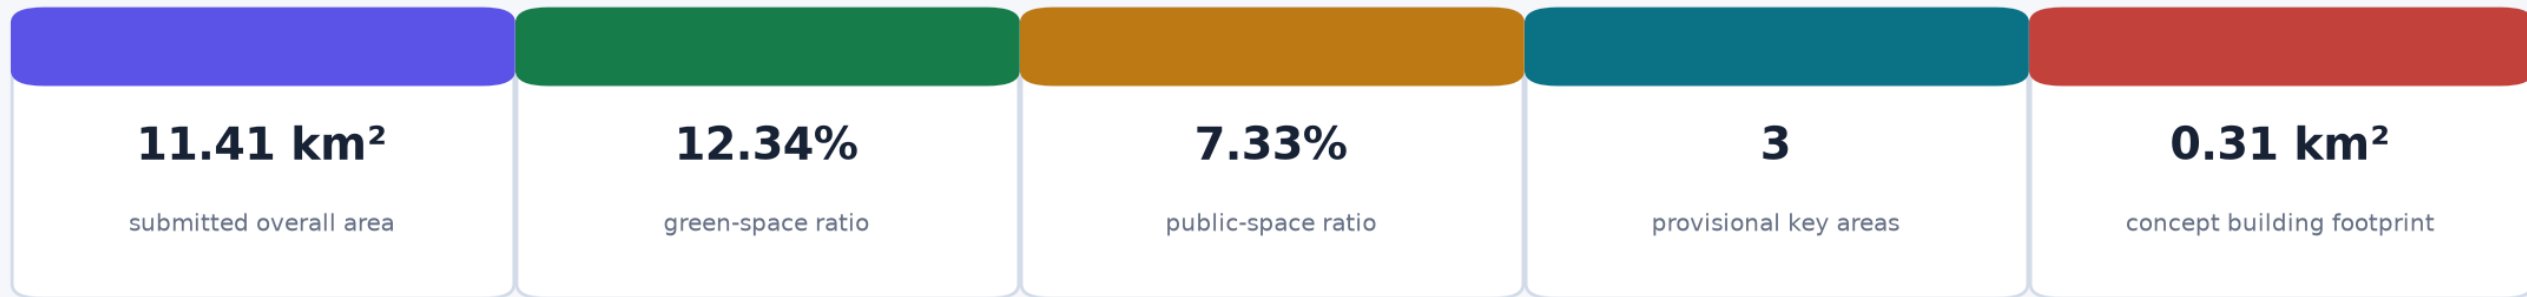

Spatial relations derive from submitted GeoJSON. Provisional boundary is for conceptual review only, not an official redline.

Implementation units

- Zhongzhiyuan | north**
Research district + Qinghe interface
Safety, standards and low-disturbance exchange.
- AI Origin | middle**
Near-campus conversion street + talent loop
Open-source publishing and daily services.
- Dazhongsi | south**
Station arrival + four-quadrant walking
Showcase, access and public interface.

Metrics and evidence chain | Recomputable, not statutory

Known values test internal consistency; all spatial layers must be recalculated when official data arrives.

Known metrics do not establish FAR, height, road redlines or approval conclusions.
