

The Proving Ground

Centennial Jing-Zhang AI Innovation Belt · Concept and graded validation environments

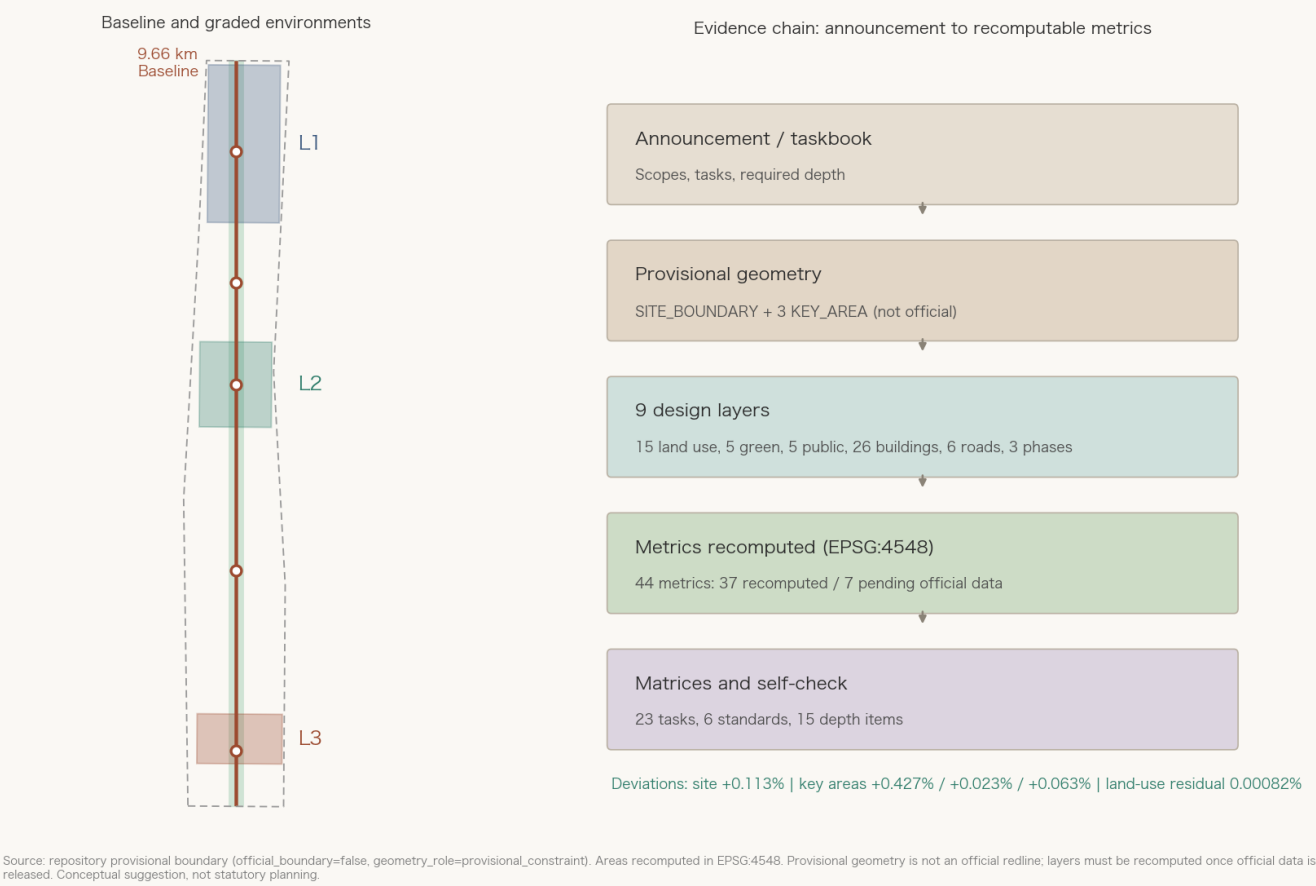

Zhan Tianyou's real legacy on this line was not the zigzag but standardisation: the 1435 mm gauge, the automatic coupler, the Jing-Zhang Standard Drawings, and the Chinese Institute of Engineers whose first stated purpose was to define construction standards.

A century ago this line answered how a new technology is uniformly measured and built. Today the same line should answer how AI is uniformly measured and accepted.

The 11.4 sq km area is designed as a city-scale AI proving ground: a 9.66 km Baseline as one shared observation section, and three key areas as L1 closed proving ground, L2 semi-open pilot and L3 open deployment. Promotion depends on a published baseline, not approval.

The Proving Ground · Evidence chain and package structure

Centennial Jing-Zhang AI Innovation Belt · overall design area 11.4 sq km

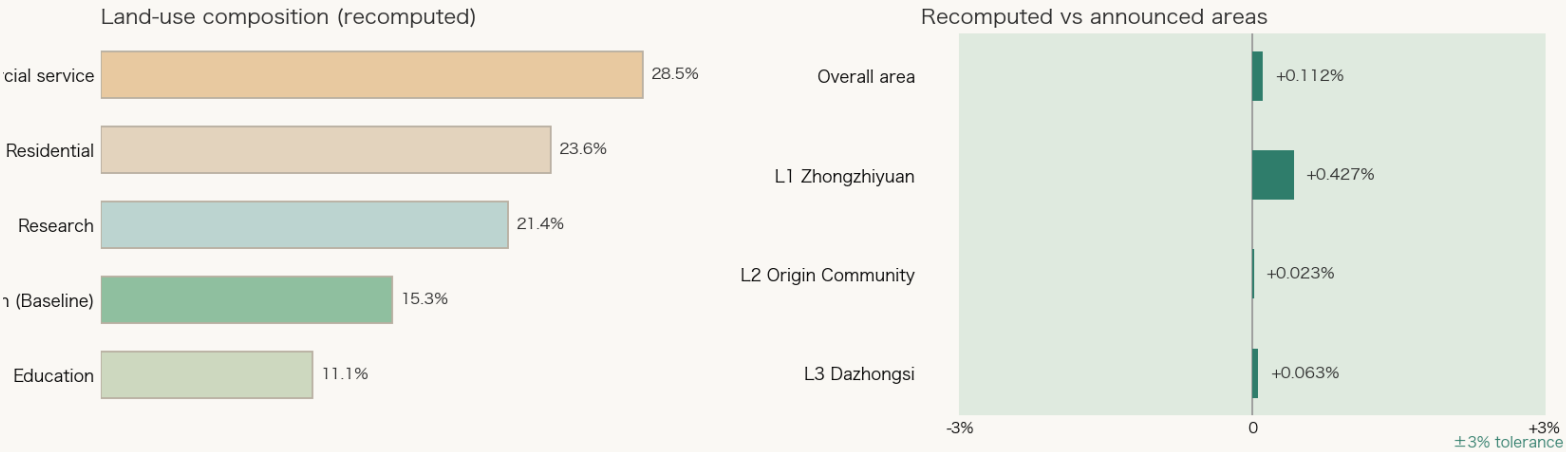

Key metrics (recomputed in EPSG:4548)

Boundary status: provisional_constraint (official_boundary=false)

Site area	11.413 sq km	dev +0.112%
Baseline length	9.66 km	
Green ratio	15.33%	
Public space ratio	3.94%	
Metrology nodes	5	
Key-area share	32.4%	
Partition sym. diff.	211.2 sqm	0.0019%
Metric status	37 / 44	7 pending official data

Metric recalculation and evidence chain

All area metrics recomputed from submitted geometry in EPSG:4548, not copied from text

Metric status: 37 recomputed / 7 pending official data

Site area 11.413 sq km	Green ratio 15.33%	Public space 3.94%
Baseline length 9.66 km	Partition sym. diff. 211.2 sqm	Metrology nodes 5

Pending official data (deliberately not estimated)

Floor area ratio	Total floor area	Building density	Building height
Statutory green ratio	AI talent density	District output	

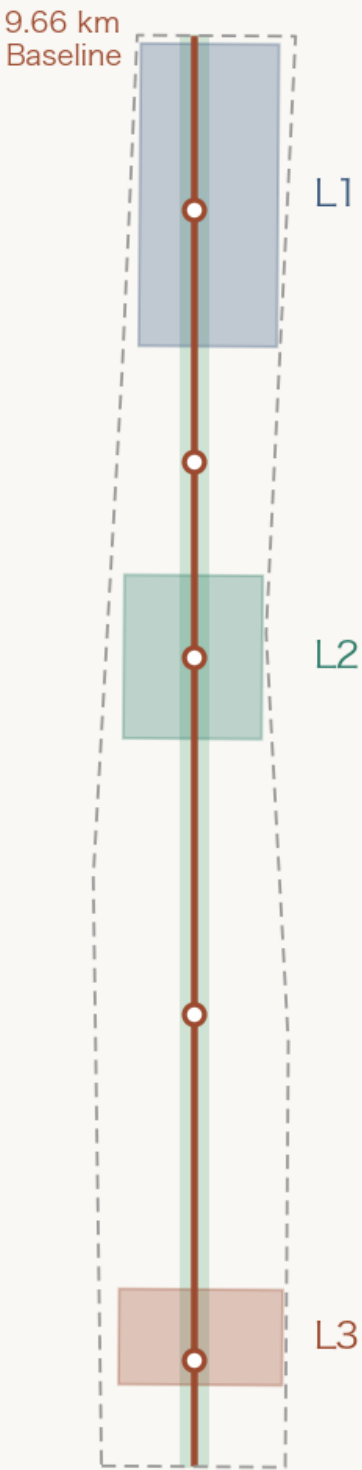

Reasons: the first five lack approved regulatory controls; the last two lack citable, rights-cleared district statistics.
The taskbook forbids fabricating output or investment figures; this proposal leaves them empty and states the required definition.

Source: repository provisional boundary (official_boundary=false, geometry_role=provisional_constraint). Areas recomputed in EPSG:4548. Provisional geometry is not an official redline; layers must be recomputed once official data is released. Conceptual suggestion, not statutory planning.

The Proving Ground · Evidence chain and package structure

Centennial Jing-Zhang AI Innovation Belt · overall design area 11.4 sq km

Baseline and graded environments

Evidence chain: announcement to recomputable metrics

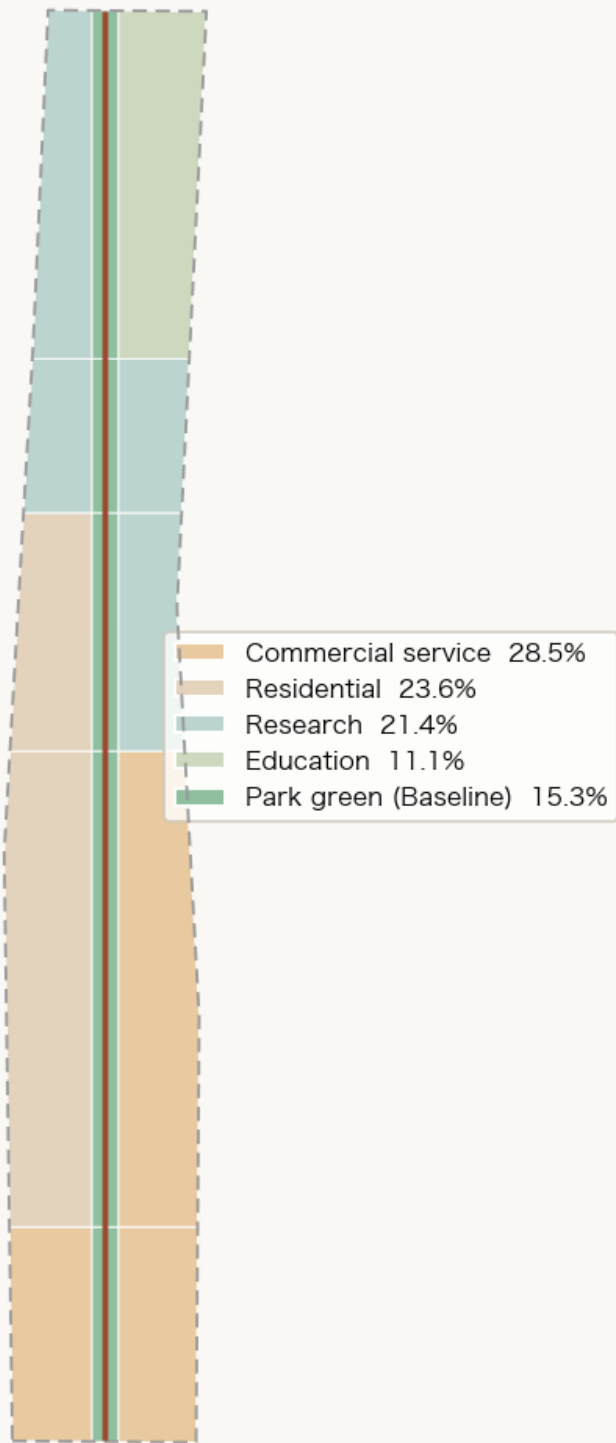

Deviations: site +0.113% | key areas +0.427% / +0.023% / +0.063% | land-use residual 0.00082%

Source: repository provisional boundary (official_boundary=false, geometry_role=provisional_constraint). Areas recomputed in EPSG:4548. Provisional geometry is not an official redline; layers must be recomputed once official data is released. Conceptual suggestion, not statutory planning.

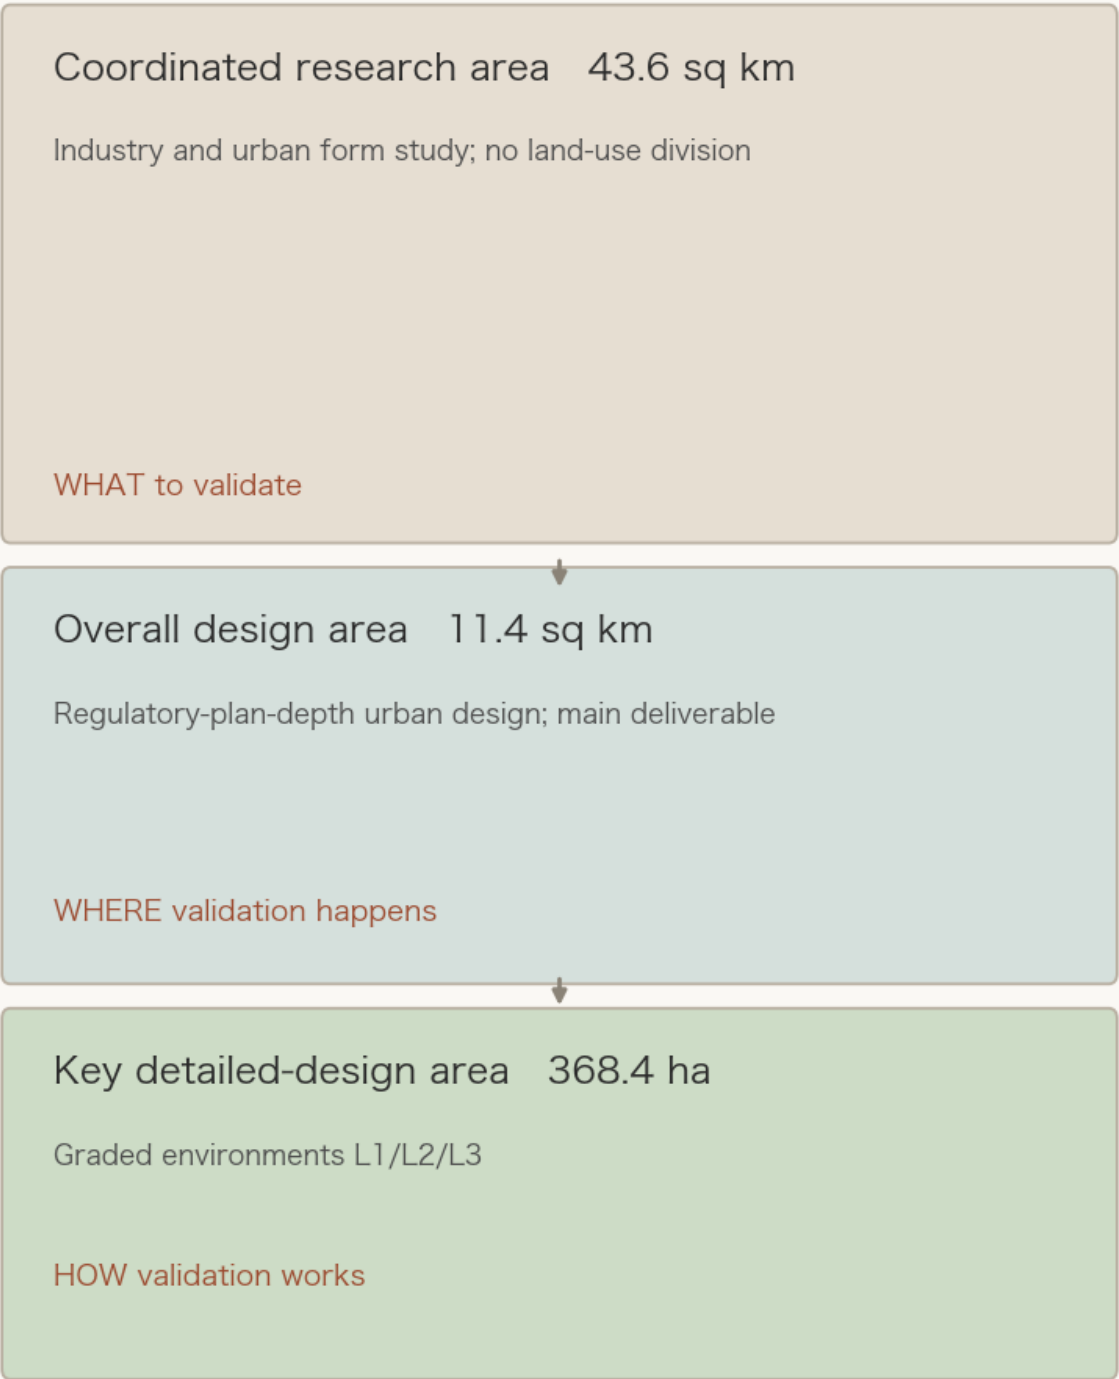

Scope levels and land-use structure

Partition symmetric difference 211.2 sqm (0.0019%)

Land-use partition (complete coverage)

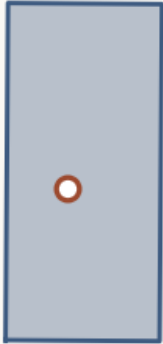

Three scope levels, three kinds of work

Source: repository provisional boundary (official_boundary=false, geometry_role=provisional_constraint). Areas recomputed in EPSG:4548. Provisional geometry is not an official redline; layers must be recomputed once official data is released. Conceptual suggestion, not statutory planning.

Graded validation environments and key-area design

Three areas total 369.3 ha, 32.4% of the overall design area

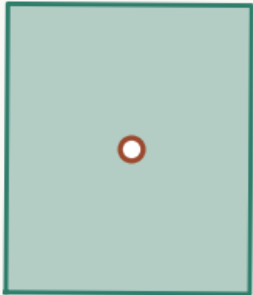

L1 Zhongzhiyuan AI Acceleration

Closed proving ground

≈ offline evaluation

Recomputed 192.92 ha, deviation +0.427%

- Reconfigurable test district
- Shared test compute
- Standards and baseline release

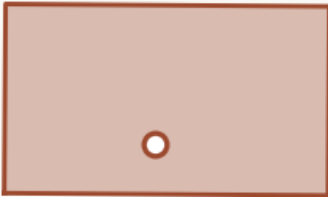

L2 Beijing AI Origin Community

Semi-open pilot

≈ shadow / canary

Recomputed 104.32 ha, deviation +0.023%

- Informed consent and opt-out
- AI beside human service
- Zero Point: measurement origin

L3 Dazhongsi AI Industry Cluster

Open deployment

≈ full production

Recomputed 72.05 ha, deviation +0.063%

- Stock retrofit
- Rail station link
- Public reading plaza

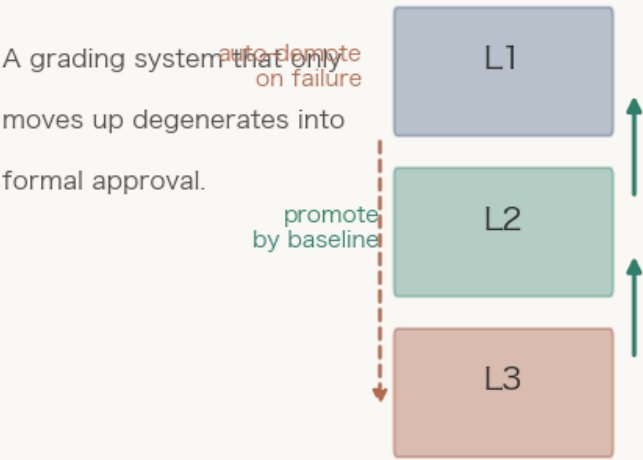

Promotion mechanism

Promotion depends on a published baseline, not on administrative approval.

- Each level defines:
- entry indicators
 - observation period
 - passing threshold

Failure beyond threshold → automatic demotion.

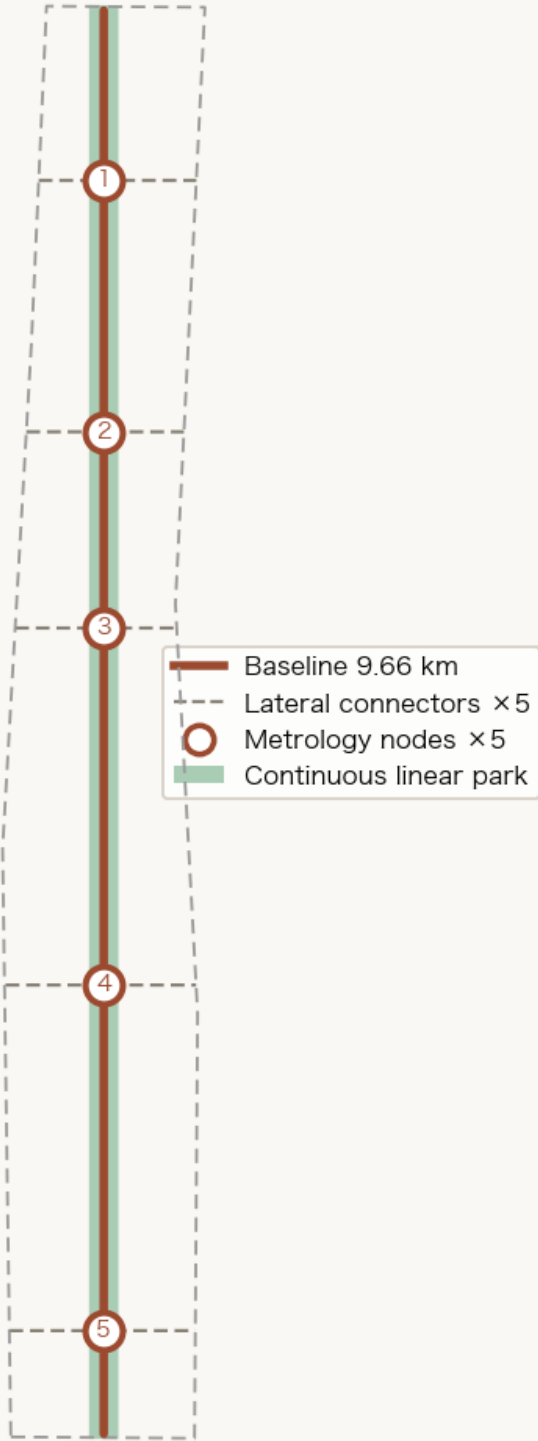

All promotions and demotions are public.

Source: repository provisional boundary (official_boundary=false, geometry_role=provisional_constraint). Areas recomputed in EPSG:4548. Provisional geometry is not an official redline; layers must be recomputed once official data is released. Conceptual suggestion, not statutory planning.

Slow mobility, blue-green and public space

Concentrating green space into a line yields corridor, continuity and one shared observation section

Metrology nodes: readings returned to the public

5	Zhongzhiyuan observation deck	L1
4	The Zero Point	L1-L2
3	Public reading wall plaza	L2
2	Baseline calibration ground	L2-L3
1	Dazhongsi reading plaza	L3

The public reading wall must also display failures.

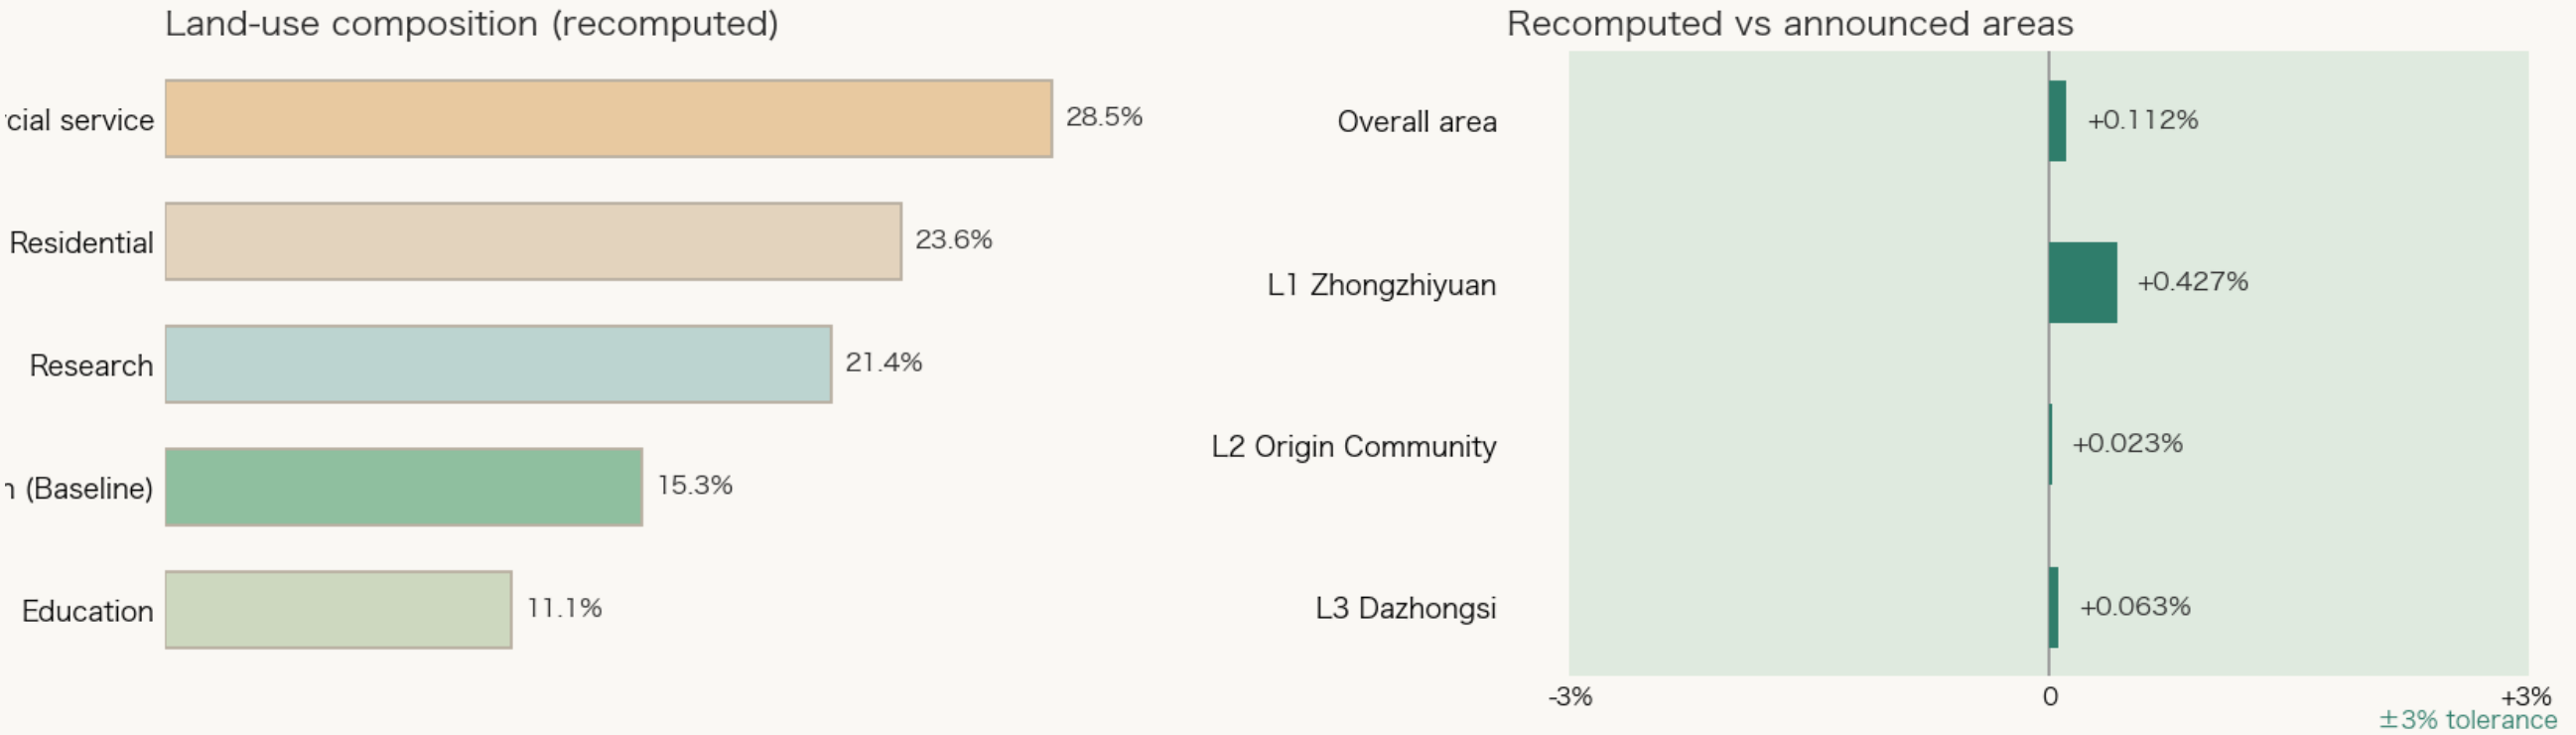

A wall that shows only successes is not a reading wall but a billboard.

Green 15.33%, public space 3.94%, centrelines 15.46 km

Source: repository provisional boundary (official_boundary=false, geometry_role=provisional_constraint). Areas recomputed in EPSG:4548. Provisional geometry is not an official redline; layers must be recomputed once official data is released. Conceptual suggestion, not statutory planning.

Metric recalculation and evidence chain
