

Jingzhang Commons

One civic spine / three verification platforms / twelve public-service pins

01 / SITE JUDGMENT

Verified facts redirect the design from a new showcase axis to repairable public interfaces.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

One civic spine, three innovation loops, twelve public-service pins

The provisional boundary is deliberately subdued; public access, platform roles and connections carry the visual hierarchy.

Conceptual design / provisional geometry / not an official plan or implementation commitment

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Site evidence atlas: each verified fact changes a design action

Facts are used to redirect design effort, not to decorate the narrative.

01 BUILT Park section already open Do not redraw the park; repair the urban interfaces on both sides.	02 PEOPLE Residents + institutions Treat daily users and care needs as core program, not event footfall.
03 IN PROGRESS Later sections advancing Embed services in current projects where agreements and safety allow.	04 FRICTION Walking + cycling breaks Prioritize station–park–campus thresholds before iconic construction.
05 INDUSTRY Three distinct clusters Assign testing, translation and public-decision roles instead of repeating one model.	06 ENGINEERING Rail + road constraints Keep major crossings conceptual until dedicated studies are complete.
EVIDENCE RULE / If a fact does not change a design decision, It does not belong in the main narrative.	

Conceptual design / provisional geometry / not an official plan or implementation commitment

ONE SPINE

Existing and emerging heritage park as civic infrastructure.

THREE LOOPS

Testing, translation and public decision at walkable scale.

PROVISIONAL

Official polygons trigger full recalculation; no false precision.

02 / OVERALL DESIGN

Public space first, low disturbance, reversible before permanent.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Overall plan: repair interfaces instead of drawing a new corridor

Existing park and railway heritage remain the spine; east–west stitches connect stations, campuses, neighbourhoods and public rooms.

Conceptual design / provisional geometry / not an official plan or implementation commitment

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Land use and spatial supply: complete coverage, shared uncertainty

Seven conceptual units organize relationships; official controls, ownership and surveyed capacity remain pending.

Conceptual design / provisional geometry / not an official plan or implementation commitment

RETAIN

Heritage, mature trees, serviceable buildings and affordable uses.

REPAIR

Station-park-campus thresholds, accessible routes and ground floors.

WAIT

FAR, road lines, permanent structures and utilities need verified controls.

03 / THREE KEY AREAS

One rights-based spatial sequence adapts to three different innovation roles.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Three key areas / one corridor / three stages of innovation

The areas are connected by public access and a common evidence protocol rather than a single architectural style.

01 ZHONGZHIYUAN

Full-stack testing platform

Research, safety evaluation, standards discussion and the Qinghe interface.

02 AI ORIGIN

Translation platform

University knowledge, open-source practice, incubation and community services.

03 DAZHONGSI

Public-decision platform

Transit arrival, existing commerce, neighbourhood care and consumer protection.

LINK / One heritage spine + three walkable loops + twelve service pins

Conceptual design / provisional geometry / not an official plan or implementation commitment

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Three platforms, one civic spine, different urban tasks

Each prototype adapts the same rights-based spatial sequence to its local role.

01 NORTH

Testing garden

Controlled evaluation, independent review, geofencing and an always-open public edge.

02 MIDDLE

Knowledge-transfer loop

Open-source clinic, shared ground floors, heritage archive and community review.

03 SOUTH

Civic verification room

Station arrival, accessible crossing, consumer protection and public deliberation.

COMMON RULE / No platform may block passage, remove human service or hide a failed test.

Conceptual design / provisional geometry / not an official plan or implementation commitment

TEST

Controlled trials, independent veto and protected public edge.

TRANSLATE

Open-source clinic, shared thresholds and community review.

DECIDE

Consumer protection, neighbourhood care and public deliberation.

04 / MOBILITY + BLUE-GREEN

Walking, rail arrival, ecology, care and service nodes form one public system.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Walking, blue-green space and public scenarios form one corridor

Accessibility, rail interchange, park continuity and service nodes are designed together.

Conceptual design / provisional geometry / not an official plan or implementation commitment

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

The railway is not a façade; it is a shared civic threshold

The order of the five bands stays constant while widths and details respond to each verified site condition.

Conceptual design / provisional geometry / not an official plan or implementation commitment

ACCESS

Always-open accessible passage and equivalent non-digital service.

ECOLOGY

Rainwater, trees, shade and visible maintenance support daily comfort.

ENGINEERING

Major crossings remain conceptual pending dedicated studies.

05 / AI+ CIVIC SCENARIOS

Twelve small services enter the city through visible rules and stop mechanisms.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Responsibility starts with who opens, operates, reviews and stops a service

The framework is conceptual; named real-world bodies, budgets and agreements remain to be confirmed.

Conceptual design / provisional geometry / not an official plan or implementation commitment

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Each key area follows one chain: condition → problem → intervention → result

A measurable result must lead to a continue, change or stop decision.

Conceptual design / provisional geometry / not an official plan or implementation commitment

MINIMUM DATA

No ambient surveillance or continuous individual tracking.

HUMAN REVIEW

Named operator, independent seats, complaint and correction ledger.

RIGHT TO EXIT

Continue, change, pause or remove after public review.

06 / IMPLEMENTATION

The 100-day pilot can reject a project; progression is never automatic.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

A 100-day pilot must produce a decision, not a temporary festival

Every platform follows the same evidence sequence and can reject permanence.

Conceptual design / provisional geometry / not an official plan or implementation commitment

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Implementation passes gates before permanence

No stage is automatic; field evidence, public benefit and accountable operations determine progression.

Conceptual design / provisional geometry / not an official plan or implementation commitment

BASELINE

One complete weekday/weekend cycle before intervention.

REVERSIBLE

L0 operations and L1 components before L2 adaptive reuse.

PERMANENCE

Six gates: conditions, access, lawful data, benefit, operator, no displacement.

07 / METRICS + REVIEW

Every readable claim links back to structured evidence and a recalculation rule.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Metrics and evidence: every readable claim can be traced and recalculated

Structured evidence carries exhaustive coverage; the proposal keeps only claim-adjacent anchors.

01

GeoJSON

Nine geometry layers with source, status, feature IDs and provisional-boundary disclosure.

02

Metrics

11.41 km² site, 17.6268% green overlay and 0.6688% public-space overlay—conceptual values.

03

Matrices

Task, standard, compliance and design-depth coverage with file-level references.

04

Proposal

Human-readable design reasoning with concise evidence markers next to each claim.

05

Display + review

Bilingual figures, HTML, A3/A0 and four local review gates.

CURRENT LIMIT / FAR, total floor area and road area ratio remain unknown pending verified controls.

Conceptual design / provisional geometry / not an official plan or implementation commitment

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Provisional geometry is managed as uncertainty, not presented as precision

Official polygons will trigger a full refresh of geometry, metrics, figures, HTML and review gates.

STABLE

Governance rules

Minimum data, visible AI disclosure, human review, non-digital access and right to exit.

MOVABLE

Pilot elements

Service desks, seating, wayfinding, rain planters and 100-day routes may relocate.

PENDING

Statutory decisions

Development capacity, road lines, permanent buildings, utilities and cross-rail works.

TRIGGER

Official geometry arrives

Replace source registration and constraints; rerun all spatial calculations.

REFRESH

One linked package

Update GeoJSON, metrics, proposal, figures, A3/A0, HTML, manifest hashes and four gates.

BOUNDARY RULE / No drawing-only update may enter formal review without recalculating its evidence chain.

Conceptual design / provisional geometry / not an official plan or implementation commitment

KNOWN

11.41 km² provisional site; 17.6268% green; 0.6688% public space.

UNKNOWN

FAR, total floor area and road area ratio await official controls.

FOUR GATES

Validation, spatial, visual and professional evidence checks passed locally.
