

Co-Rail Commons: AI Public Innovation Corridor

A3-01 / Overall concept

01

One spine

Heritage, mobility and AI service nodes share one public route.

02

Three rooms

Each key area has a distinct innovation, transfer or exchange role.

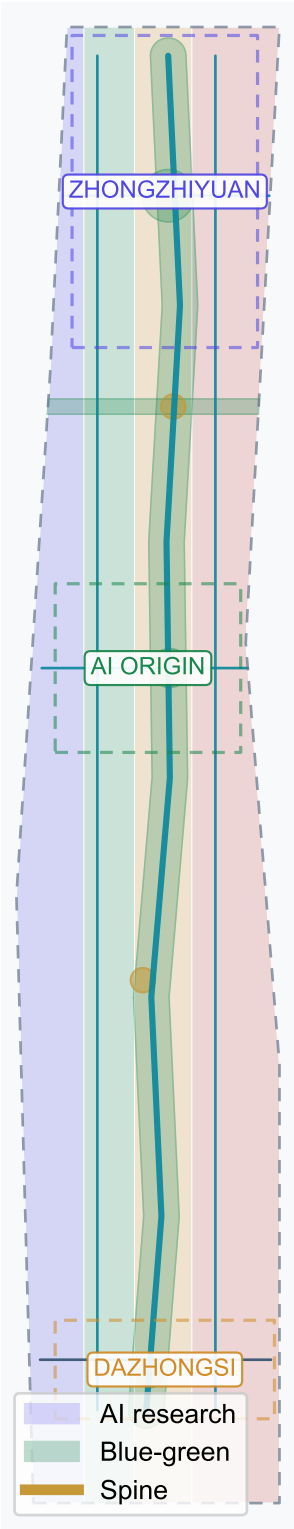

03

Long-term operation

Events, developer communities and open scenarios keep the corridor legible.

Four-part spatial structure

A3-02 / Land use and public realm

A

Space

Four conceptual land-use bands derived from one topology-safe partition.

B

Public

Green and public rooms are distributed on the main spine and cross-links.

C

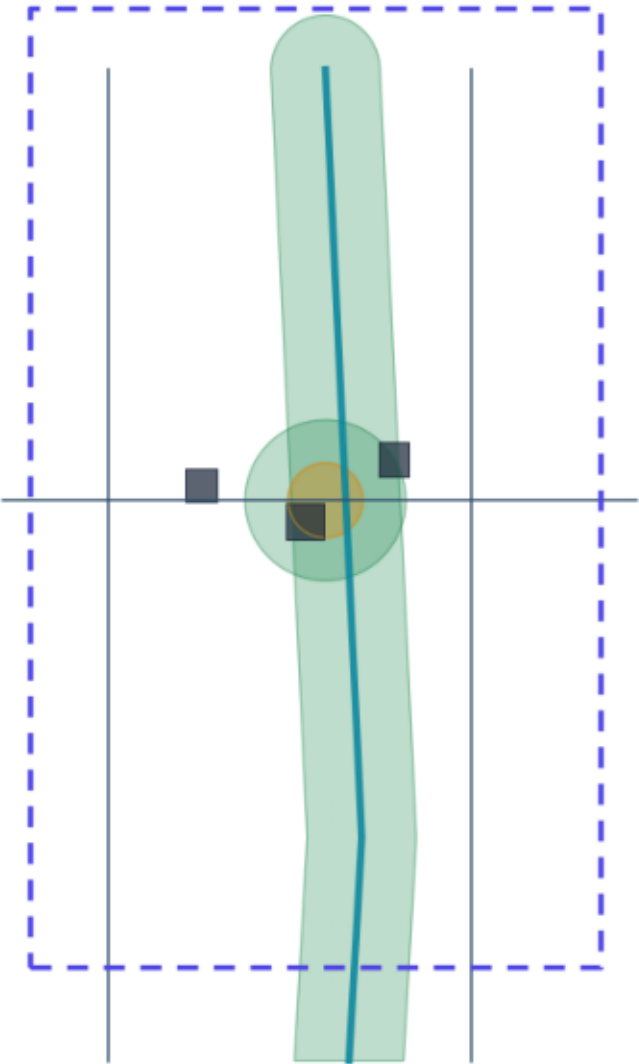

Boundary

All polygons remain provisional until official source files arrive.

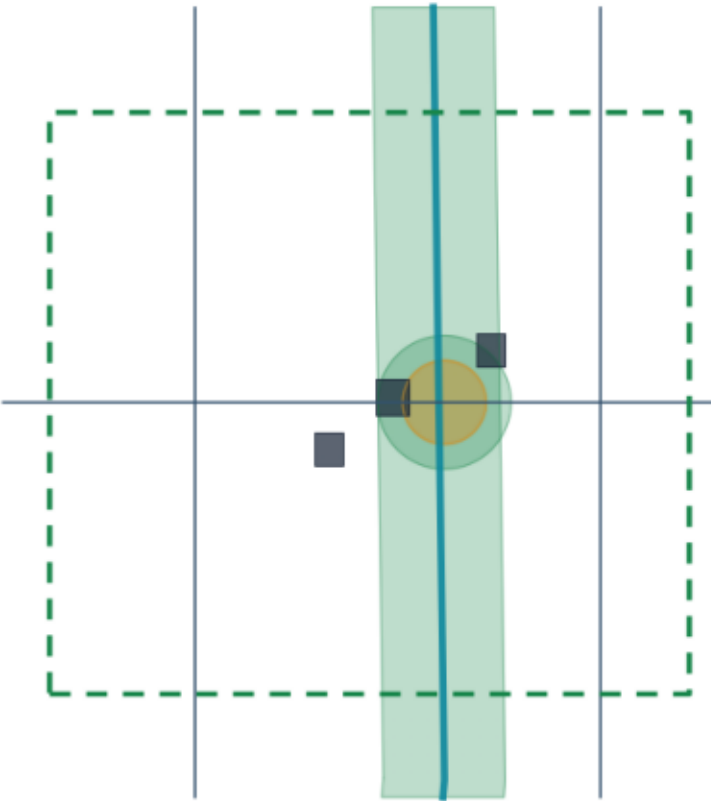

Three Key Areas: Three Public Values on One Spine

North-to-south order follows the announcement; key-area polygons remain provisional

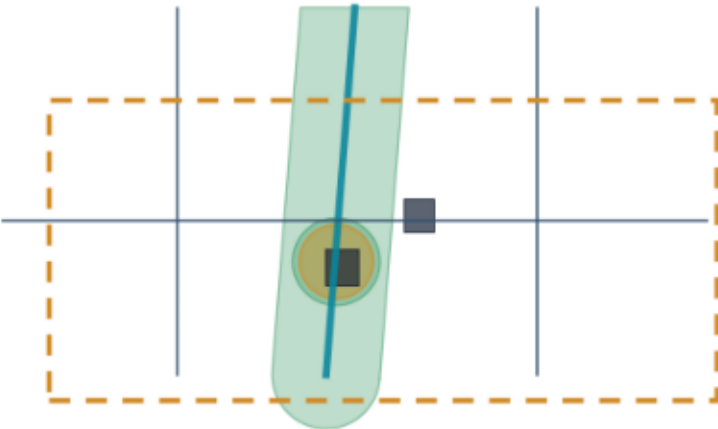

01 ZHONGZHIYUAN

02 AI ORIGIN

03 DAZHONGSI

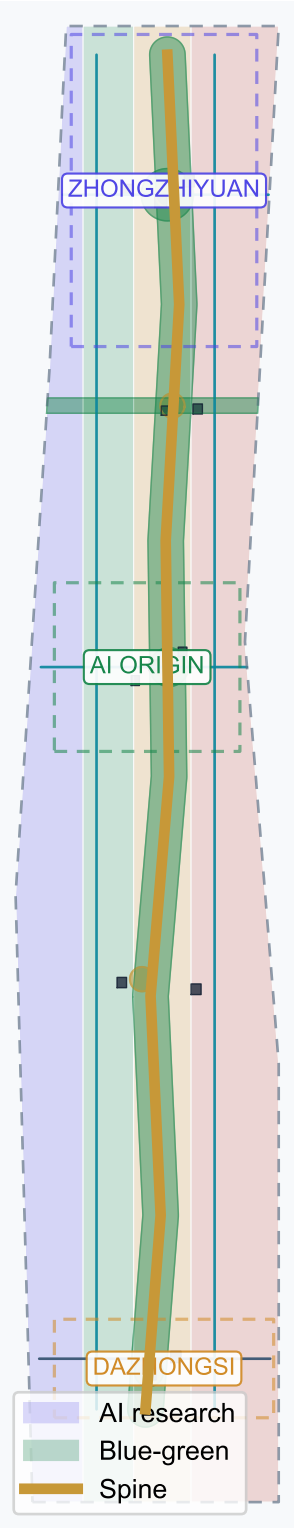

□□□□ / Urban exchange
Conceptually connect industry service, public realm and four-quadrant walking.

□□□□ / Transfer
Support transfer through open release, talent services and campus links.

□□□□ / Full-stack test
Provisional constraint: intake generation, display and discussion only; not an official redline, precise area or approval basis.
Join evaluation, standards, compute and public explanation in one garden network.

Mobility and blue-green network

A3-04 / Continuous public system

01

Spine

Slow mobility, green and public rooms.

02

Cross-links

Connect key areas, station interfaces and daily services.

03

Human

Every AI scene retains human review and a non-digital route.
