

Jing-Zhang AI Commons Spine

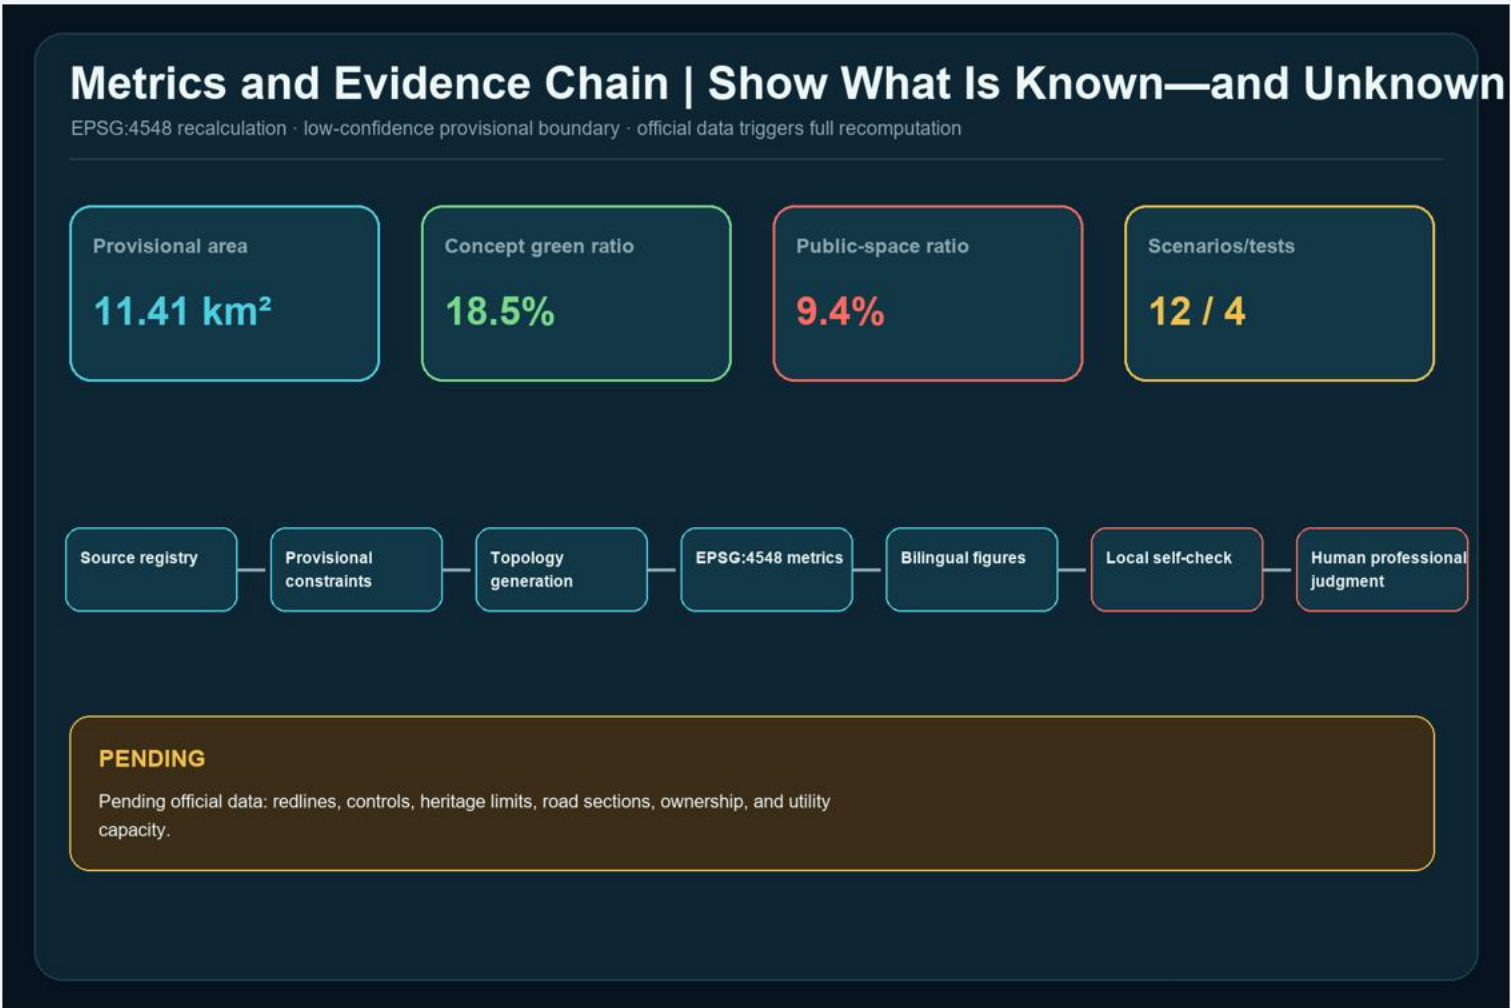

Jing-Zhang AI Commons Spine | Overall Concept

Low-contrast provisional envelope; high-contrast design relationships; professional deepening required

- One commons spine · Three capability yards · Twelve service ports
- Every spatial move is conceptual and awaits official data.

Evidence and Scope

- Official announcement and taskbook define tasks; provisional polygons support intake only.
- Issue #846 alignment conflict is disclosed.

Complete Partition | Functions Coordinated Across the Commons S

Topology-complete; conceptual land use is not an approved regulatory plan

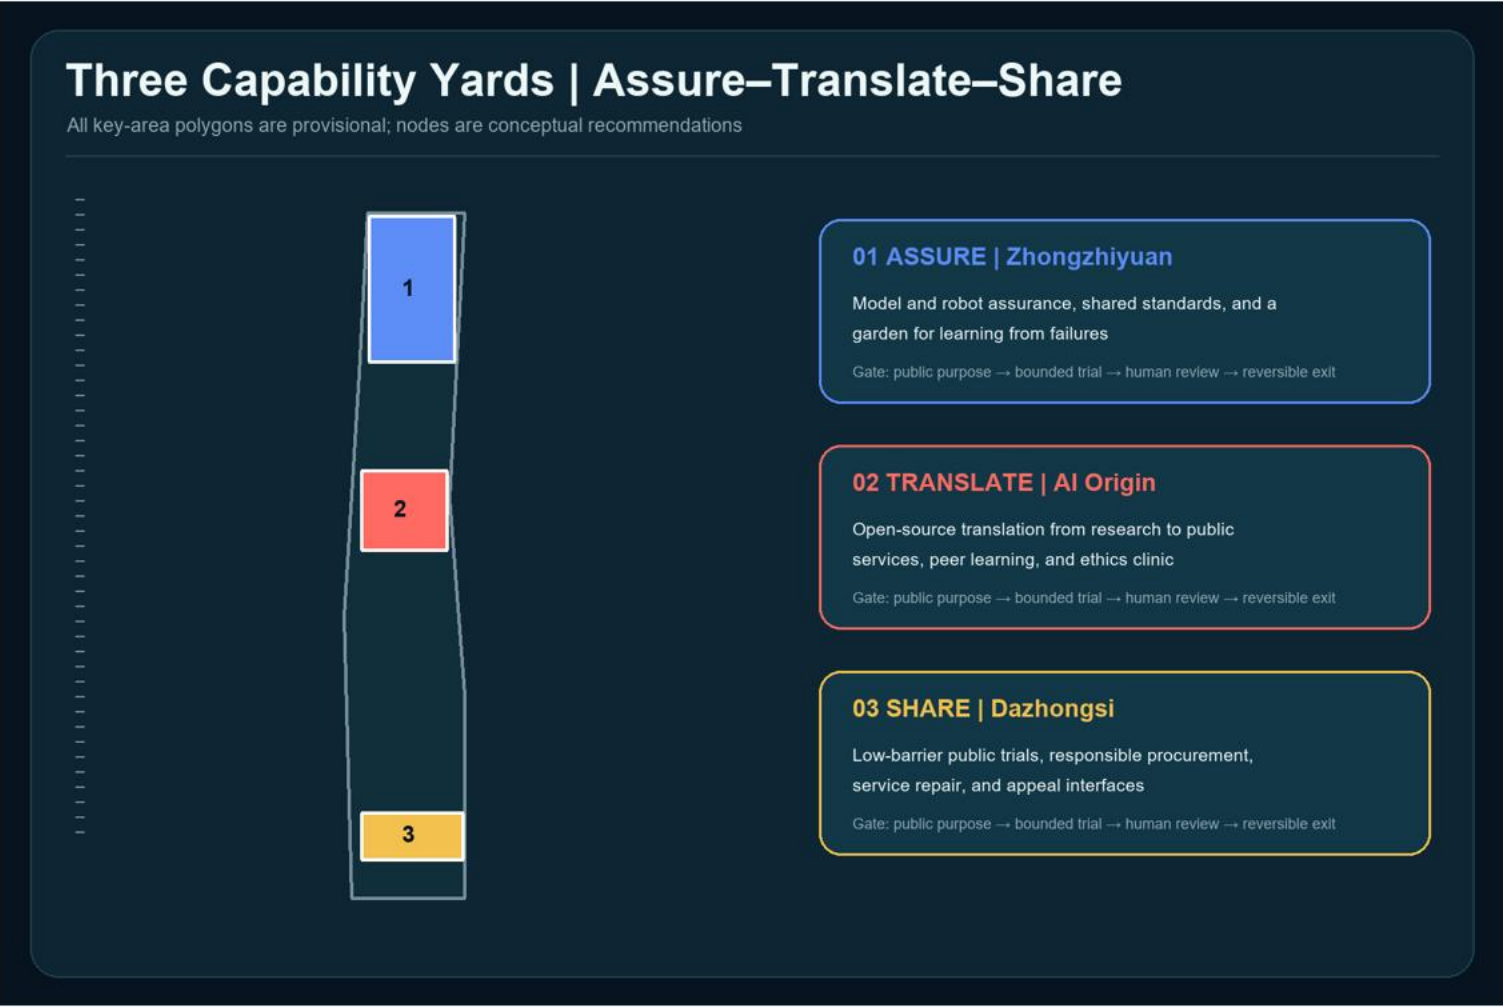

Land-use grammar

- R&D
- Education
- Housing
- Commercial service
- Culture
- Park green
- Square

- The central open space is the interaction layer of public capability, not leftover land.
- Mixed functions support research, life, learning, and cultural translation.
- When official parcels and controls arrive, preserve the topology logic and recalculate.

- Complete topology partition with a public capability interface.
- FAR, height, ownership, and engineering remain pending.

Three Capability Yards

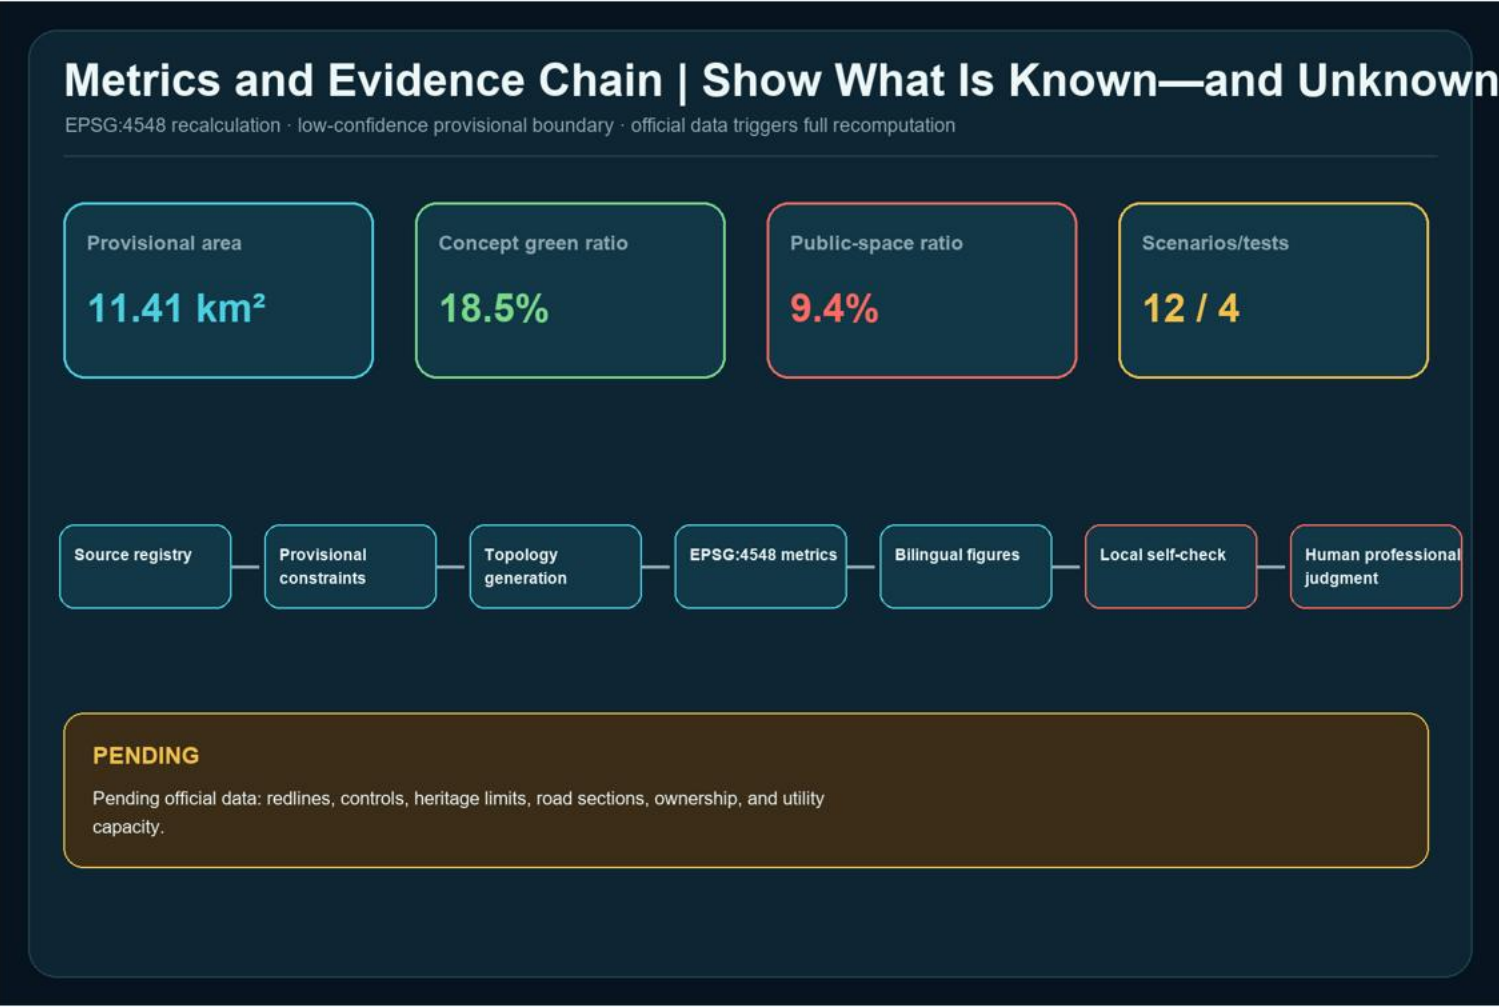

- ASSURE at Zhongzhiyuan; TRANSLATE at AI Origin; SHARE at Dazhongsi.

Mobility, Blue-Green, and Scenarios

- Accessible continuity, non-AI routes, human takeover, and quiet hours.
- 12 scenarios, 4 tests, 6 personas, and 4 honor nodes.

Projects, Phasing, and Risk

- Eight conditional packages and three evidence-triggered phases.
- Machine PASS is not approval; professional judgment remains final.
