

The Jingzhang Proving Belt

CENTENNIAL JING-ZHANG AI INNOVATION BELT

An innovation belt that turns the city into a public proving ground

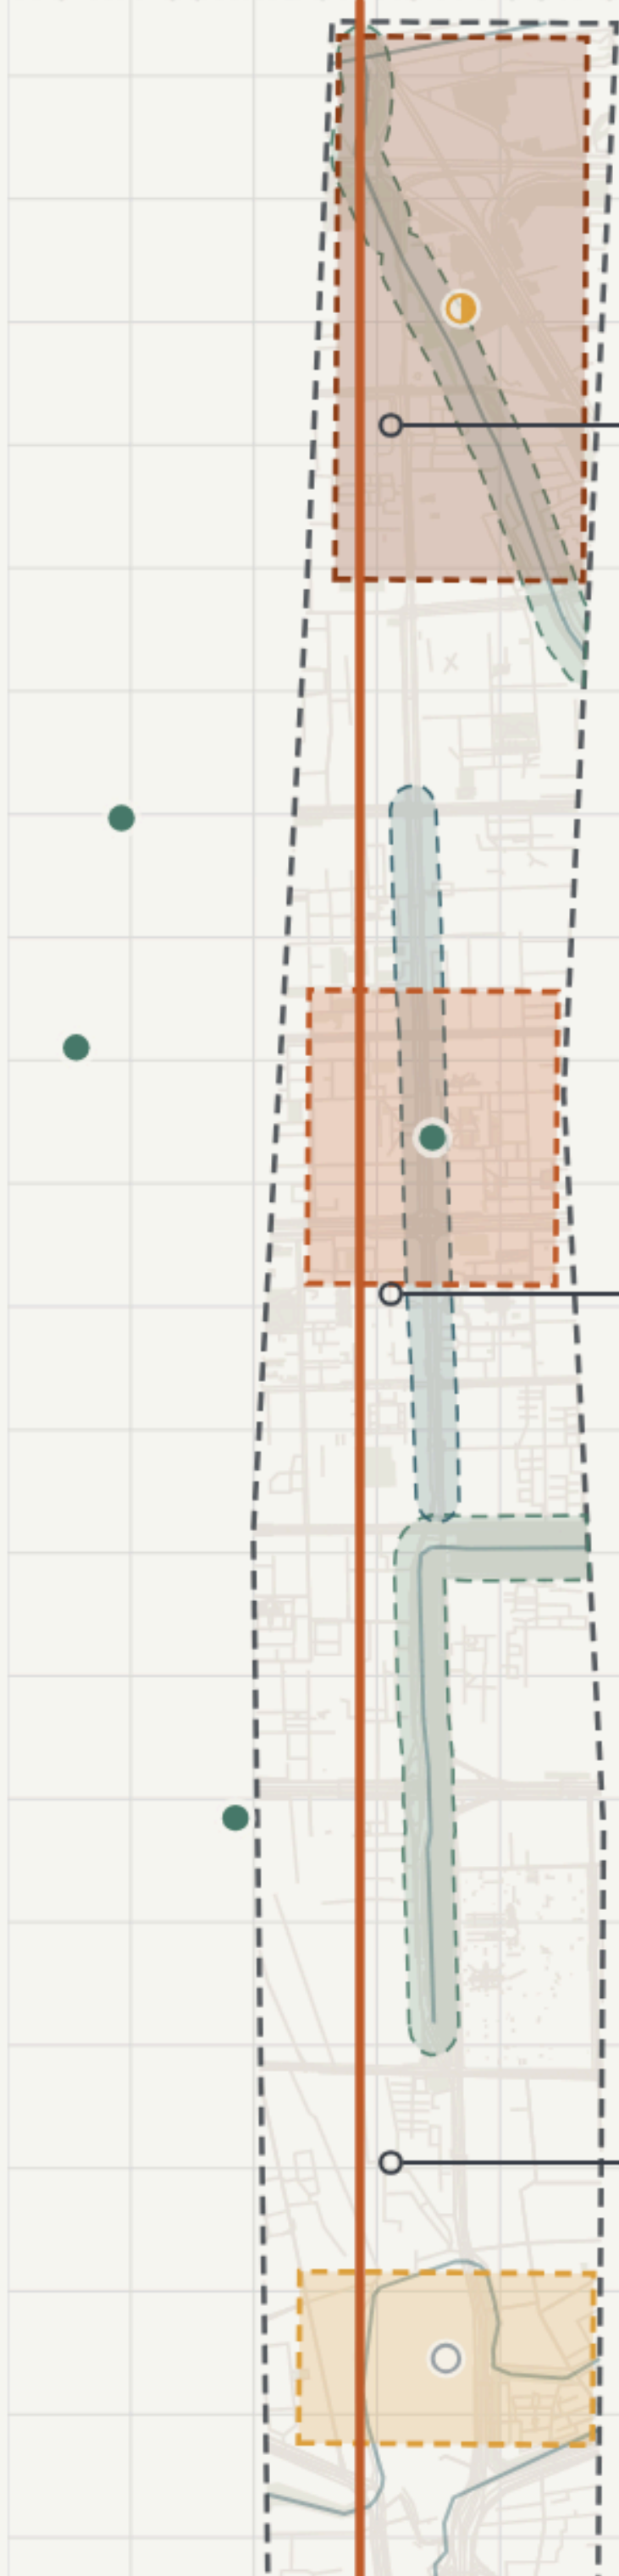

图 1 总体概念与空间骨架

这条 9 公里走廊，是一个有授权、有实证、有兑现、有反馈的四步闭环。

FIG.1 SITE OVERVIEW — A 9 KM CORRIDOR AS A FOUR-STEP PROVING LOOP

1

GENESIS PROVING YARD

Foundation-layer proving: a place where long-horizon, high-failure-rate technology is allowed to fail

2

COMMONS PROVING QUARTER

Community-level proving: residents become the accepting party, not the population being tested

3

MARKET PROVING QUARTER

Market proving: tested against willingness to pay — if it cannot be sold, it is not proved

4

EXCHANGE WING

Authorisation and settlement: proving rights, computing vouchers, capital and IP services

5

PRACTICE WING

Delivery and public acceptance: the public use it, judge it, and can stop it

From building a park to issuing a proving right

AI's bottleneck is no longer in the laboratory but in whether it works in a real city. Scarce real scenarios, high validation costs and nowhere to put failure — these three are the hidden constraint shared by every AI innovation district.

This proposal turns them into explicit spatial and institutional arrangements: **issue a right to prove, leave a place for failure, and give the public a way to stop it.**

Proving is not experimenting

The subject of an experiment is the researcher; the subject of proving is the party doing the checking. One word moves authority from the people making the technology to the people living with it.

Level	Scope	Area
Coordinated research	PROV-RESEARCH-001	43.6 km ²
Overall design	PROV-SITE-001	11.4 km ²
Key-area detail	Three key areas	369.3 ha

PROVING STATUS

○ APPLYING ○ PILOTING ● VERIFIED ⊘ RETIRED

DISCLAIMER

Provisional inferred boundaries, official_boundary=false, not to be used as an official red line or a precise area basis. This is a conceptual submission and constitutes no approved or confirmed government arrangement.

Three Zones, Two Wings

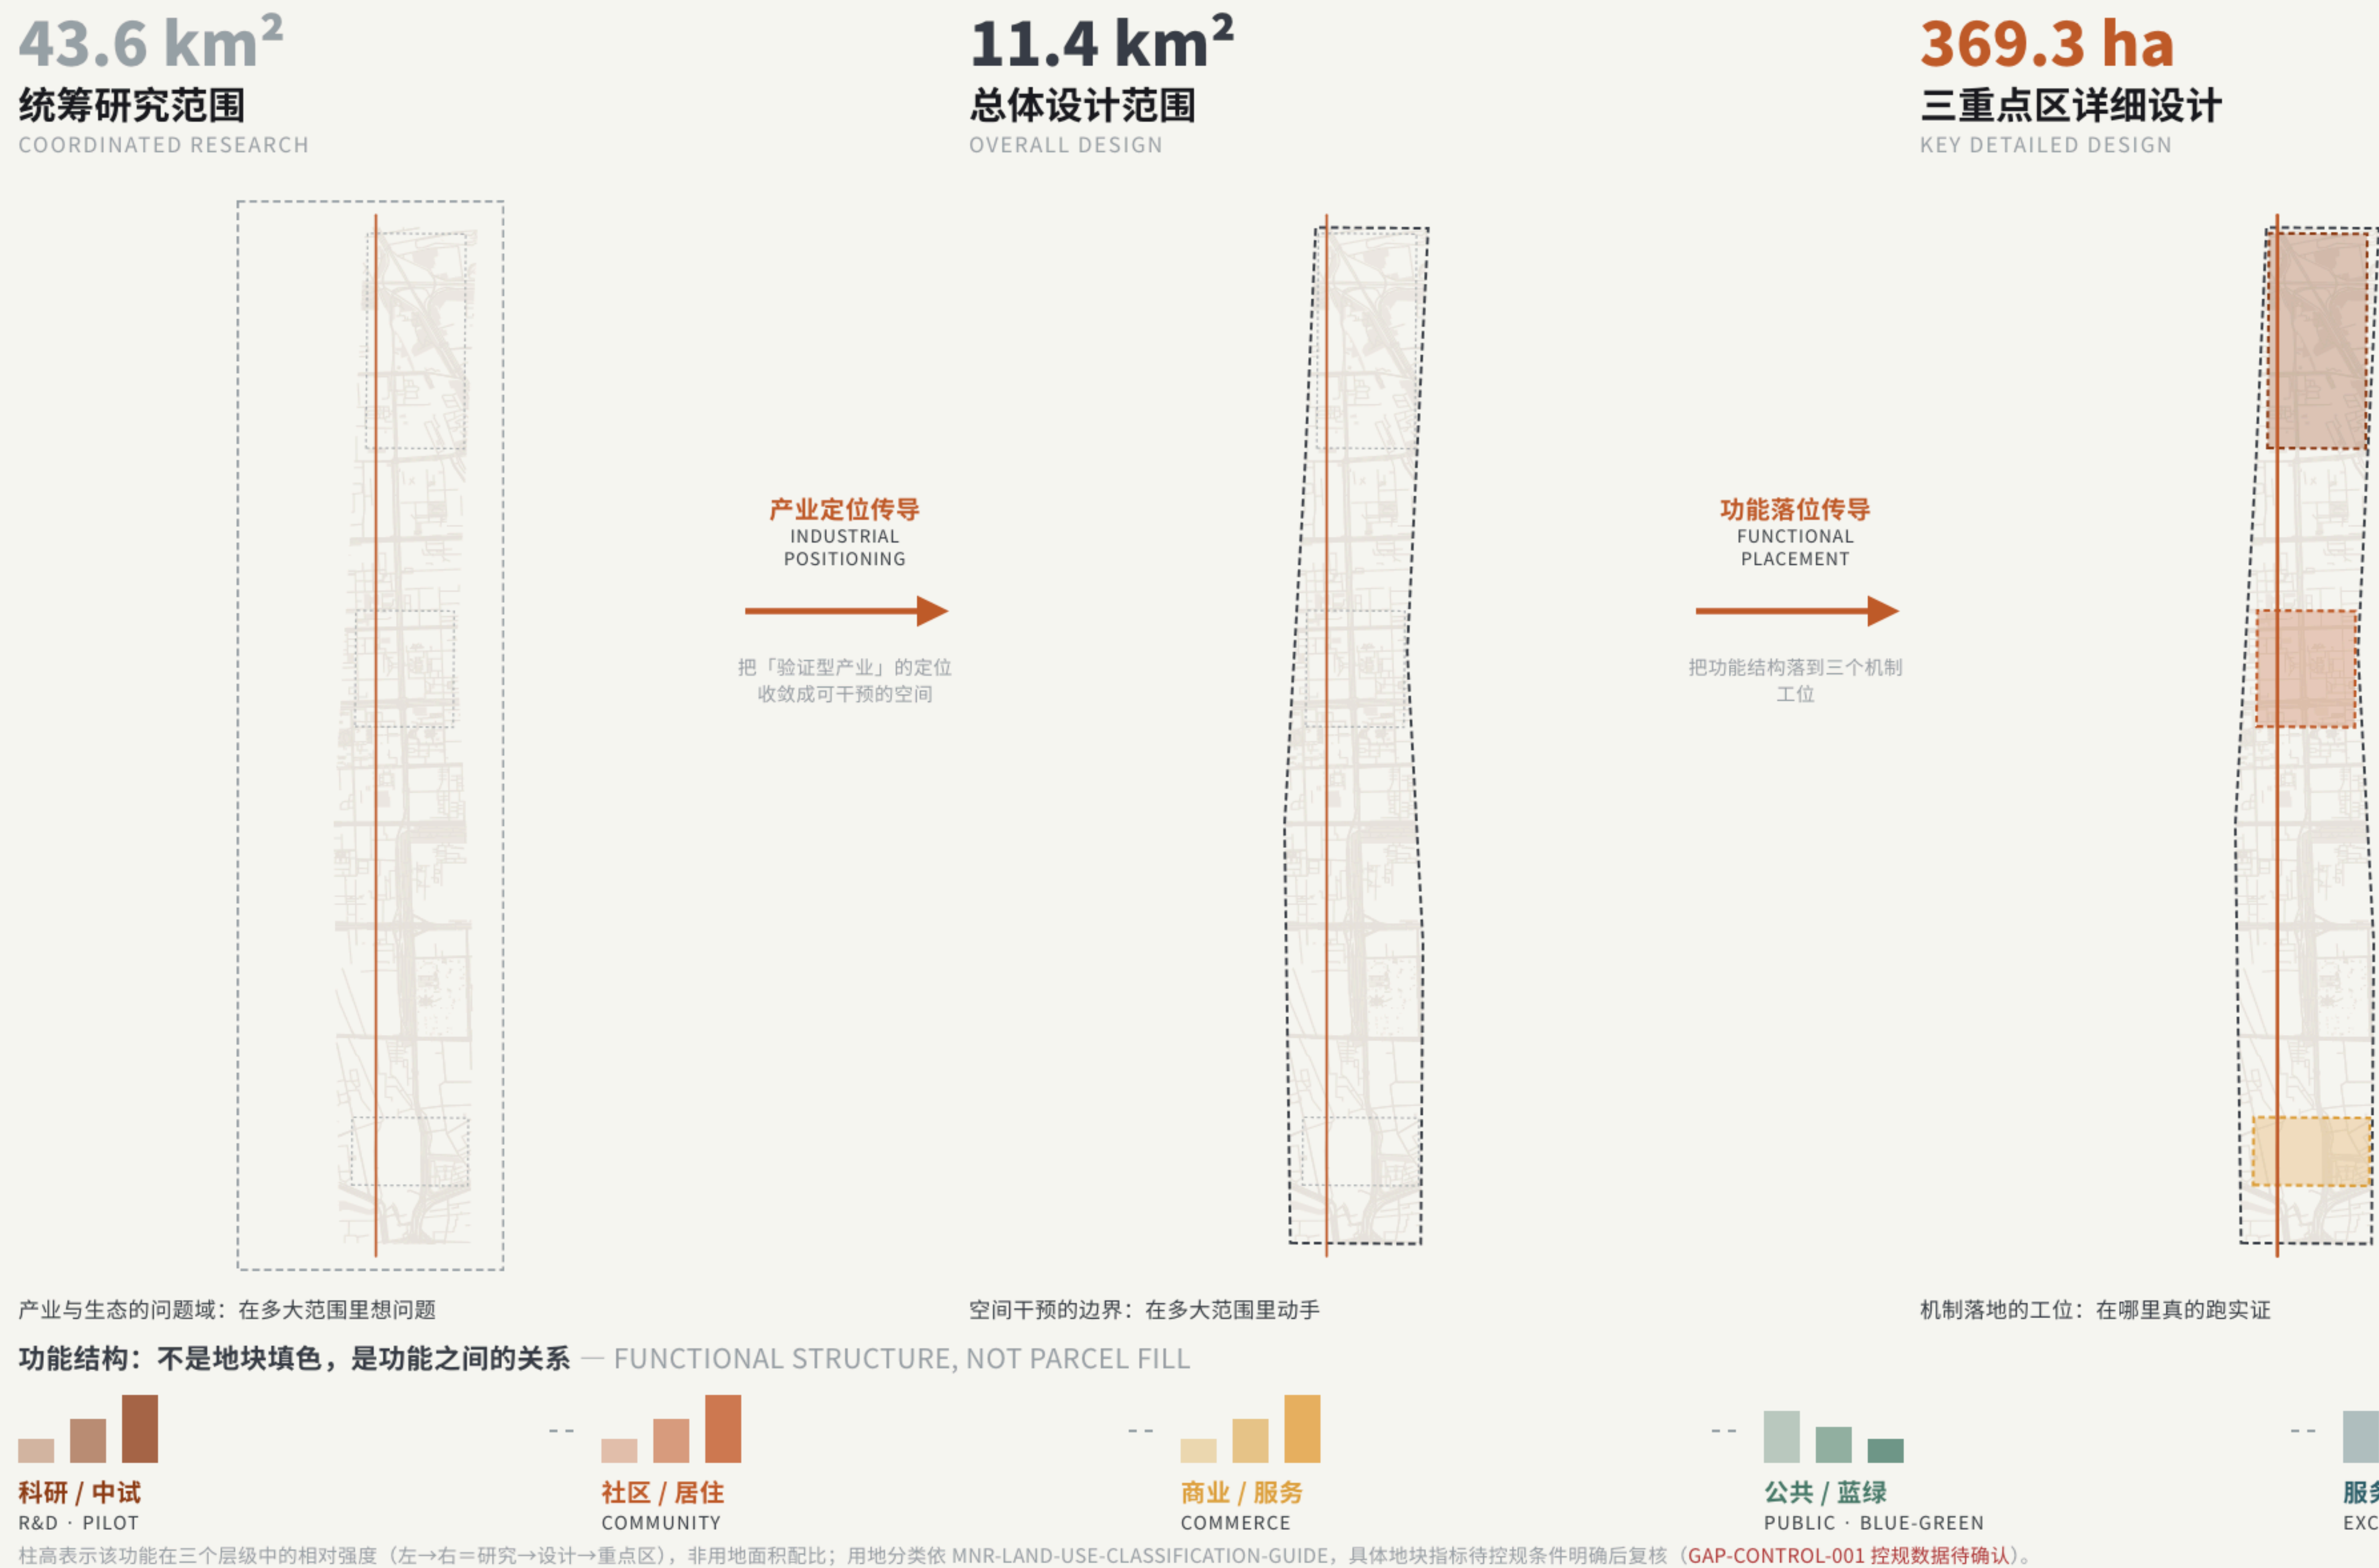

THE PROVING LOOP

The belt carries what gets proved; the wings carry what makes proving possible

图 2 空间结构与三层范围传导

从 43.6 到 11.4 平方公里再到三个重点区，每一层收缩都对应一次功能聚焦——而不是简单的套娃。

01

PROVING RIGHT

Time-limited authorisation: expiry forces review, so space is never permanently occupied

02

COMPUTING VOUCHERS

Public computing issued as vouchers, with usage tied to proving progress

03

NOTICE BOARD

Eight fields published on site — the physical entry point for the public's right to stop

04

PUBLIC STOPPING

Objections above threshold trigger review, which may rule remediation or early retirement

05

RETIREMENT ARCHIVING

Process data enters a public archive: retirement is not disappearance but input

The four-step loop

Step	Carrier	Question answered
4 Authorise	Exchange Wing	Who authorises treating the city as a test bed
1-3 Prove	Three zones	Run it on real streets, failure permitted
5 Deliver	Practice Wing	The public can stop it; the market votes with money
↻ Feed back	Back to authorisation	Failure is recorded, not concealed

Only the fourth step carries reverse force.

A system with the first three steps is an issuing system. Add the fourth and it becomes a governance system — because public judgement acts directly on whether a proving right is renewed.

Each scope contraction is a functional focusing, not a nesting doll. All three boundaries are provisional inferred.

SCENARIOS & PUBLIC REALM

The public are not a test population but an accepting party holding the right to stop

9公里绿廊已经建成了——问题不再是「怎么贯通」，而是「怎么让它开始产出实证」。

FIG.4 MOBILITY & BLUE-GREEN — THE GREENWAY IS BUILT; NOW MAKE IT PRODUCE EVIDENCE

A public building devoted to what did not work — if failure is really allowed, it should have an address

Where proving rights are renewed or withdrawn, held in public with rulings archived

Settlement and display interface for paid market acceptance at the southern landmark node

The yearly rhythm of issuing rights and opening projects to public experience

Ritualising failure to dissolve the stigma — a district willing to hold it is one that truly permits failure

Phase 2 of the Jing-Zhang Railway Heritage Park opened along its full length on **6 August 2026**, completing the nine-kilometre greenway.

So the question is no longer how to connect it, but **how to make it start producing evidence** — turning already-built public space into a checkable proving ground.

scenario nodes along the nine kilometres, with all four proving states present — including one **retired** slot.

Three tiers of acceptance

Experience	Public feedback by scanning the board
Joint review	Resident representatives may initiate reassessment
Stopping	Objections above threshold may force remediation or retirement

Metrics and Governance

METRICS, DELIVERY & GOVERNANCE

Every number traces to its source, including the uncertain ones

图 5 指标复算与证据链

每一个数字都能被追到源头，包括那些我们还不确定的数字。

FIG.5 METRICS & EVIDENCE CHAIN — EVERY NUMBER TRACEABLE, INCLUDING THE UNCERTAIN ONES

We draw our own data gaps

Putting the to-be-verified register on the drawing turns compliance from a written promise into **visual evidence** — where regulatory conditions are missing, the metric is written as pending and never presented as approved.

Even our own proposal is being checked.		
Metric	Value	State
Overall design area	11,412,825.386 m²	official
Green ratio	7.1588%	official
Public space ratio	4.3616%	official
Announced cross-check	+0.1125%	within 1%
Floor area ratio	[to be verified]	GAP-CONTROL-001
This proposal gives no floor area ratio, building height, demolish-renovate-retain classification or road red line.		

PHASE 1

COMMONS FIRST

Highest population and knowledge density, so public acceptance is easiest to start

PHASE 2

GENESIS EXTENSION

Long-horizon foundation proving, where tolerance requirements are highest

PHASE 3

MARKET DELIVERY

Paid acceptance facing the market, testing self-generated revenue coverage

8 ITEMS

TO BE VERIFIED

Regulatory metrics, firm structure, Phase 2 scale, official boundaries — all marked on the drawing
