

01

One spine

Heritage, mobility and AI service nodes share one public route.

02

Three rooms

Each key area has a distinct innovation, transfer or exchange role.

03

Long-term operation

Events, developer communities and open scenarios keep the corridor legible.

Scenario cards

10 cards with space, data, privacy, human review and operator fields.

Validation

Three proposed pilots remain not-run until authorization and baseline freeze.

Users

Developer, startup, visitor, resident and student/faculty needs map to rooms.

Operation

A yearly rhythm connects events, open scenes, community and international communication.

Boundary

No private data, no unapproved deployment, no government or implementation claim.

Geometry

Site, key areas, land use, buildings, roads, green, public and phases share one EPSG:4326 exchange layer.

Recompute

Known area and ratio metrics are recalculated in EPSG:4548; FAR, height and density stay unknown.

Phasing

South public rooms first, middle origin community next, northern innovation garden later—concept sequence only.

Risk

Official polygons, road redlines, controls, ownership, utilities, heritage and baseline remain pending.
