

JINGZHANG 168 — GIVE THE WEEK BACK TO THE CITY

01/24

The century-old railway used timetables to organise trains. This proposal uses a public, reversible, human-governed weekly timetable to organise civic time.

CONCEPT EXPERIENCE · GPT Image 2 · presentation only · not spatial evidence

- Success is not the amount of AI deployed, but whether public time is delivered safely, quietly and accessibly.
- 3 zones · 6 booking segments · 7 time components · 12 scenario nodes · 8 states.
- All geometry is provisional; every operating outcome remains unknown until measured.

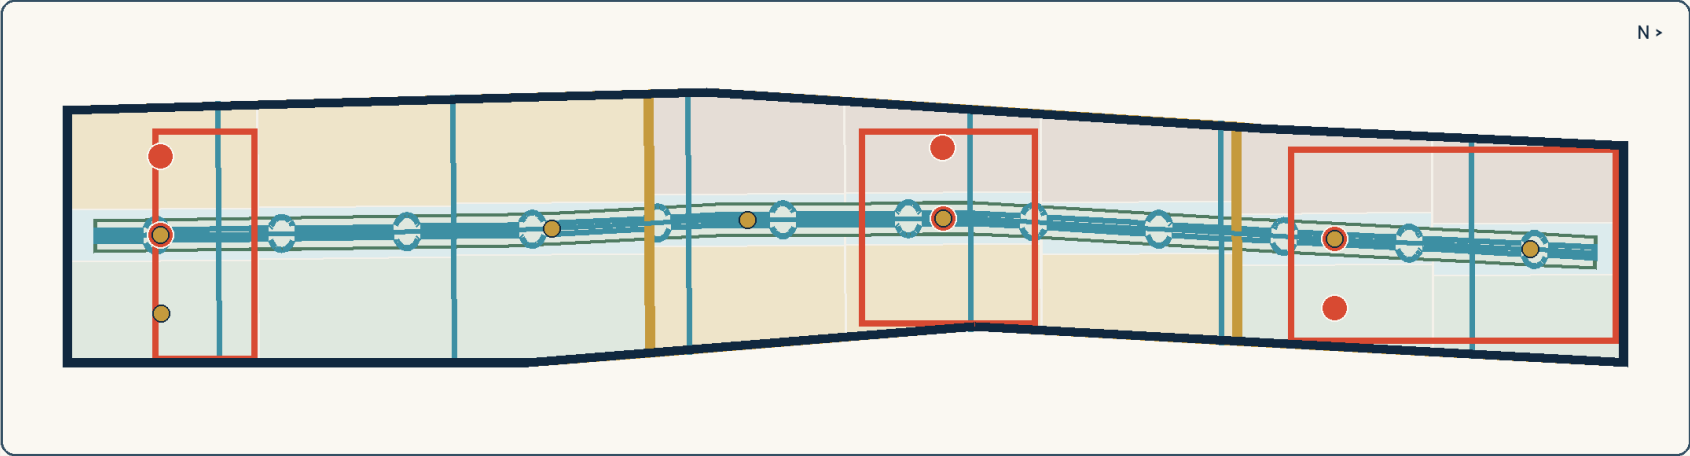

Space is not a backdrop for AI scenes; it is the physical interface through which a protocol enters, stops and restores.

OVERALL PLAN · ONE BELT, THREE TIME ZONES, TWELVE NODES

Space, time, accountability and exit conditions on one reviewable plane

168

English evidence edition · v2.0

OPERATING BELT · THREE ZONES × SIX SEGMENTS × TWELVE NODES

TZ-01 CITY LOUNGE	BK-01 / BK-02 continuous operating section	5 SCN
TZ-02 KNOWLEDGE TRANSFER	BK-03 / BK-04 continuous operating section	4 SCN
TZ-03 MODEL VALIDATION	BK-05 / BK-06 continuous operating section	3 SCN

Boundaries support design comparison only; official data triggers one replacement, crop and recalculation chain

PROVISIONAL DESIGN GEOMETRY · not an official boundary, approval, or setting-out survey

Source: local submission package · deterministic local layout

SPATIAL CONTRACT

3

zones: city lounge / knowledge transfer / model validation

6

booking segments: an operating section, not an administrative boundary

7

time components: board, gate, bay, quiet, reset, stop, evidence

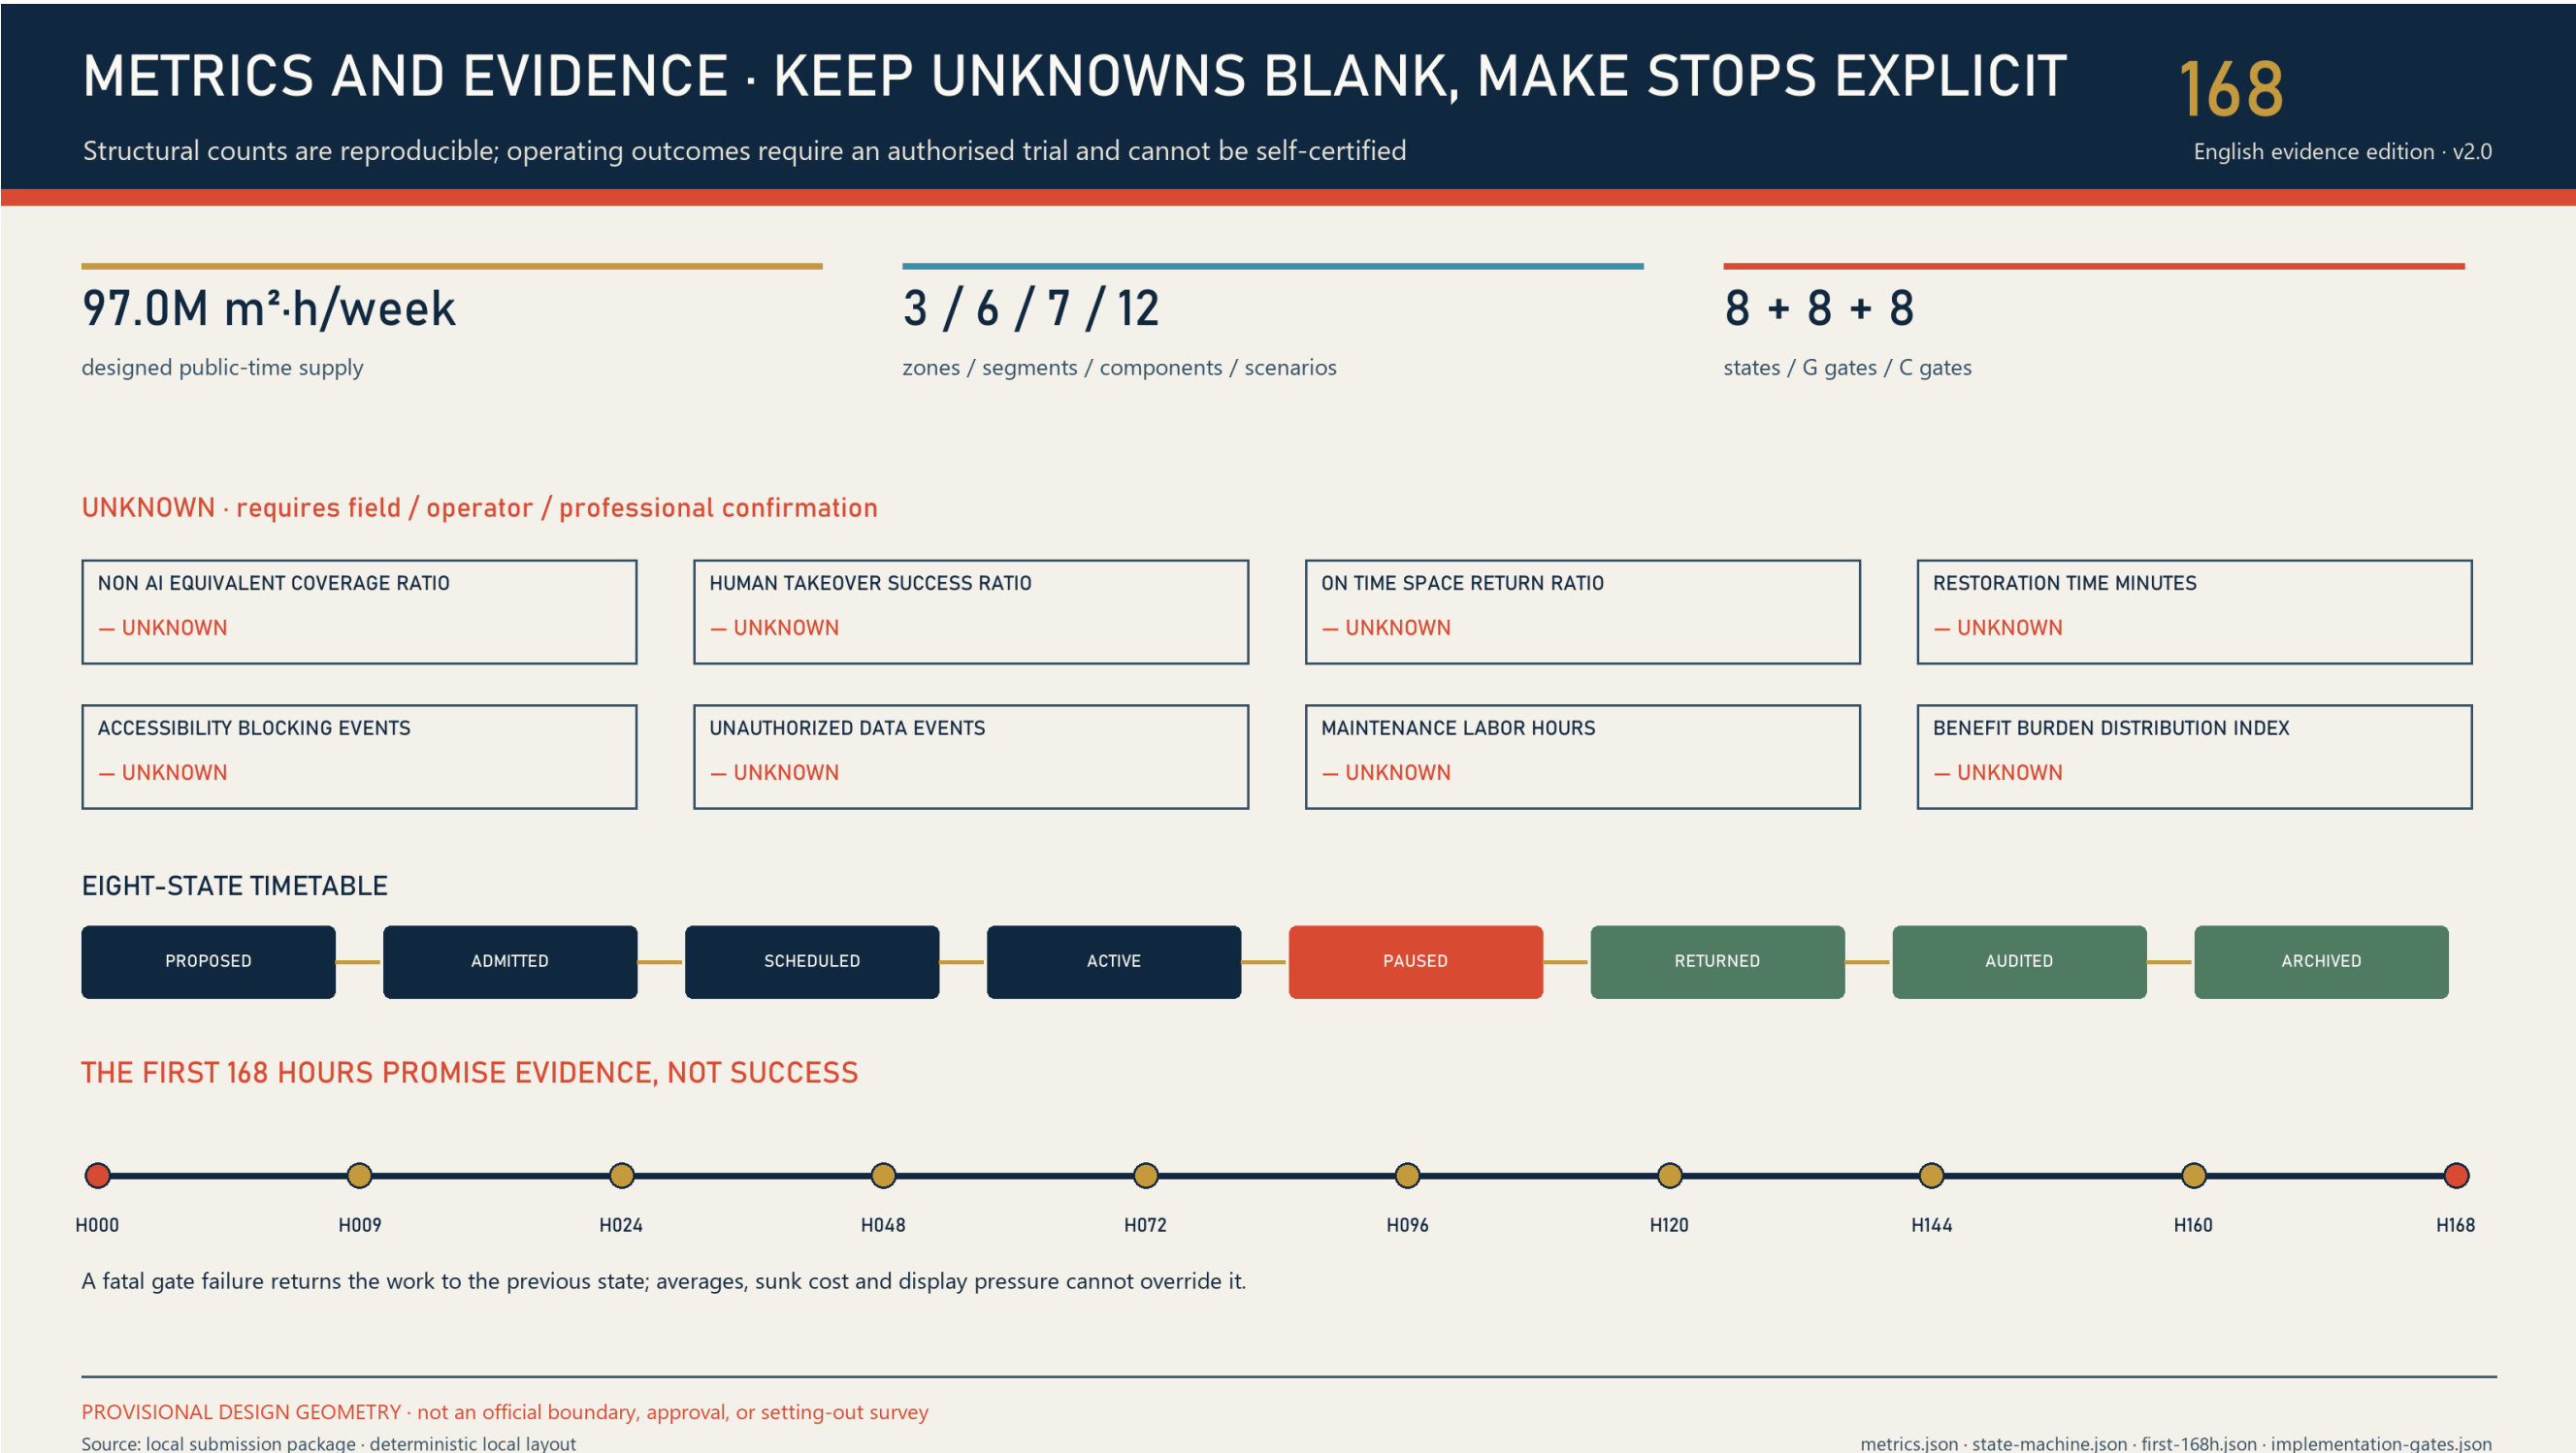

12

scenario nodes: each binds data, human gate, stop and restore

PROVISIONAL DESIGN GEOMETRY · not an official boundary, approval, or setting-out survey

SITE-001 · PROV-KEY-001..003 · TZ/BK/TC/SCN

Reproducible structural counts and unmeasured operating outcomes remain visibly separate.

A memorable concept competes only when space, public rights, implementation and evidence all hold together.

E01

Brief fit: three scopes and six agent tasks mapped individually.

E02

Originality: m²·h/week accounts jointly for public-space area and opening time.

E03

AI: assists scheduling, navigation, simulation and review; humans retain admission, pause, appeal and archive.

E04

Delivery: first 168 hours, twelve-week reviews and G0–G7/C0–C7 gates.

E05

Public interest: non-AI equivalence, accessible stop, nonparticipant impact and labour are admission conditions.

E06

Expression: structurally equivalent Chinese/English; prose, images, JSON and GeoJSON cross-reference.

HOW TO READ — JUDGEMENT, EVIDENCE AND UNKNOWNNS

Figures explain; GeoJSON and JSON verify. When they conflict, machine-readable evidence and the higher source grade control.

E01

OFFICIAL: notice, taskbook and public standards only support their explicit wording.

E02

PROVISIONAL: temporary scope and key areas support comparison and recalculation workflows.

E03

DESIGN: three zones, six segments, seven components and twelve nodes are reproducible but not approvals.

E04

OPERATIONAL: timetable, state machine, RACI and gates require authorised operators.

E05

PENDING: title, control plan, utilities, fire, heritage, budget, capacity, SLO and field baselines.

Professional honesty converts unknowns into interfaces for survey, recalculation, stop and handover.

E01

Known: task descriptions, provisional base, 24 design parcels, three key-area directions and design layers.

E02

Unknown: statutory geometry, title, existing buildings, road lines, utilities, fire, heritage, ecology and observed flows.

E03

Forbidden inference: demolition, FAR, height, investment, approval date or government operator.

E04

Trigger: replace official polygons once, recrop all layers, recompute metrics, update figures/project ownership and publish a diff log.

Every scale answers who benefits, what changes spatially, what data is minimum, who can pause, and what receipt remains.

E01

c.43.6 km² coordinated study: industry, talent, knowledge and regional interfaces.

E02

c.11.4 km² overall design: land use, movement, blue-green, projects and public-time protocol.

E03

Three key areas: model validation garden, knowledge interchange and open city lounge.

E04

A failed key-area pilot must revise the overall rule rather than disappear inside publicity.

Seven precedents test time value, real-world trials, knowledge transfer and public-space connectivity.

E01

Kalasatama: time saving and agile pilots → $\text{m}^2 \cdot \text{h} / \text{week}$; no copied governance.

E02

Marineterrein: seasonal/day–night living lab → reversible windows; no presumed approval.

E03

one-north / Punggol: mixed sharing → timed access; no copied intensity.

E04

Knowledge Quarter / Paris-Saclay: networks and maturity → G0–G7; no transplanted authority.

E05

Kendall Square: public-space connection → continuous civic spine; no copied boundary.

The brand is not a skin; it makes accountability, time and restoration readable in public space.

E01

TC-01 week board: version, opening, limits and appeal.

E02

TC-02 human gate: admission and takeover.

E03

TC-03 time bay: bookable, clearable temporary space.

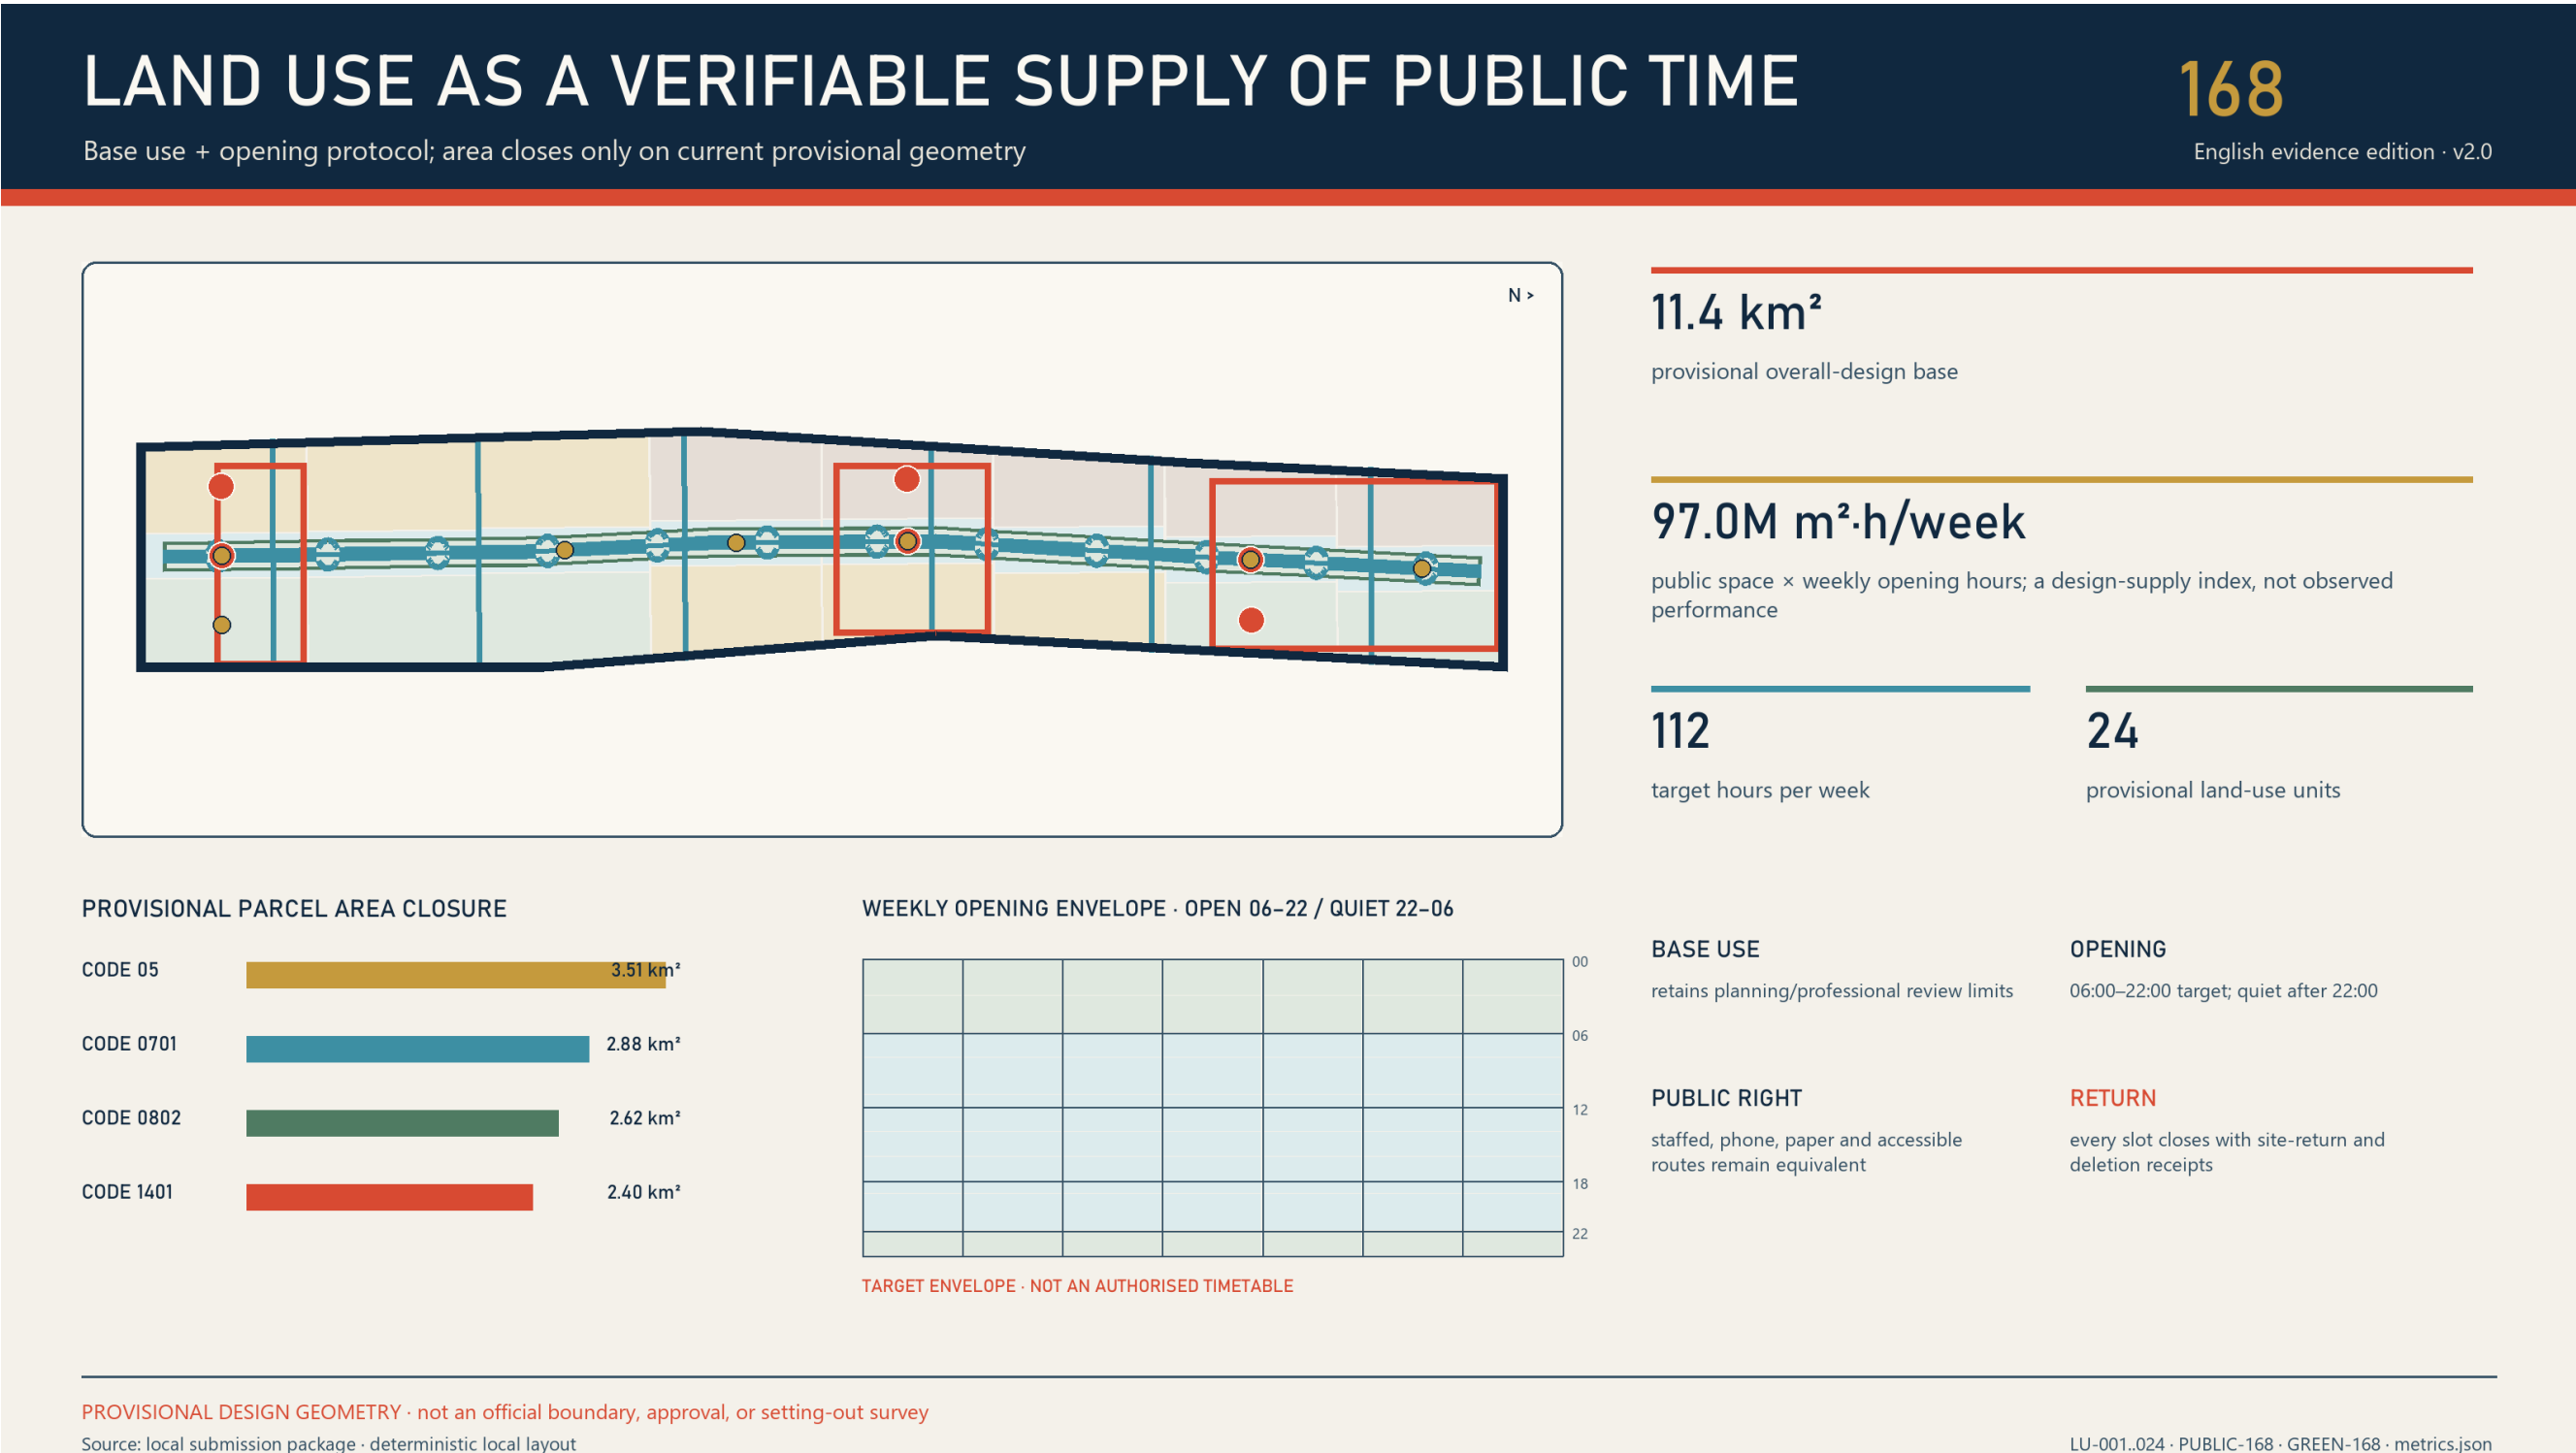

E04

TC-04 quiet edge; TC-05 reset mark.

E05

TC-06 accessible stop; TC-07 evidence clock.

Twenty-four provisional units pair a base-use label with a weekly opening protocol.

Concept footprints test shared ground floors and relationships; they are not existing buildings, property or demolition decisions.

E01

G0 evidence register → G1 title/boundary → G2 condition/structure → G3 public interest.

E02

G4 professional design → G5 approval/funding → G6 minimum build → G7 post-evaluation.

E03

Retain first; retrofit requires structural, fire, access and heritage review; removal is last.

E04

A failed gate returns the work; sunk cost is not evidence.

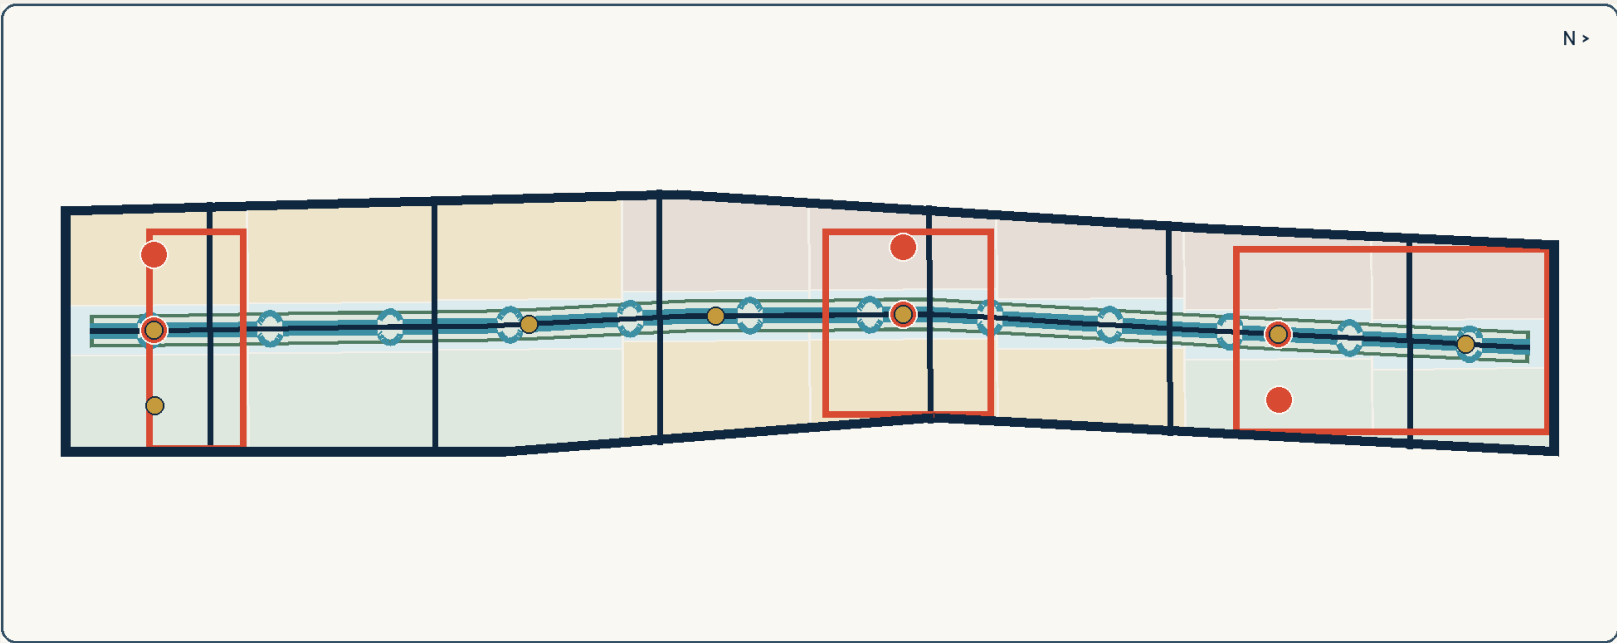

Low-speed devices remain bounded trials and never acquire permanent right of way.

MOBILITY, BLUE-GREEN AND THE RIGHT TO QUIET

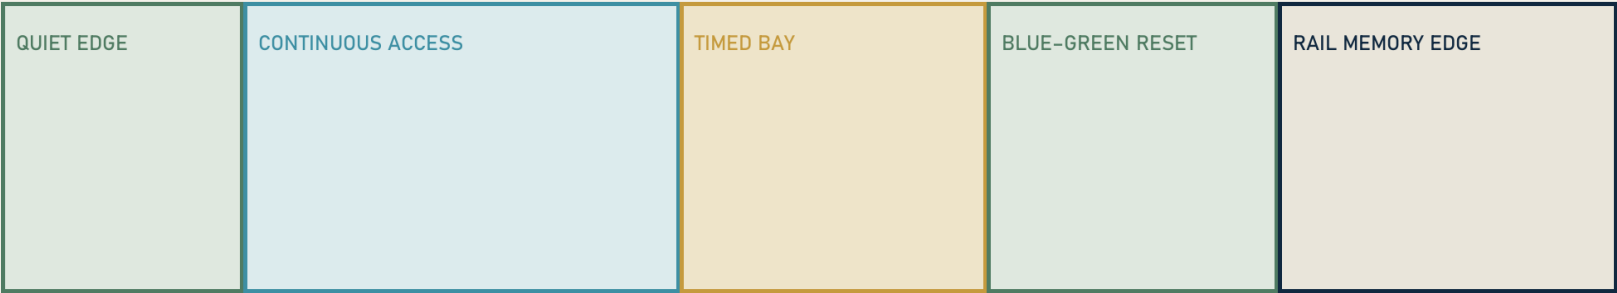

One spine and six seams remain a professionally reviewable public framework; every device window is reversible

168

English evidence edition · v2.0

OPERATING SECTION OF THE CIVIC SPINE · DIAGRAMMATIC / NO DIMENSIONS

THE ALL-HOURS PASSAGE CANNOT BE NARROWED BY BOOKINGS, DEVICES OR EVENTS

PROVISIONAL DESIGN GEOMETRY · not an official boundary, approval, or setting-out survey
Source: local submission package · deterministic local layout

FOUR NON-TRADEABLE BASELINES

PASSAGE

bookings, robots and events cannot narrow the public route

QUIET

quiet after 22:00; complaint can reduce, move or cancel a slot

HUMAN STOP

TC-06 is a physical stop/help point, not an app control

RESET

TC-05 records before/after; failed restoration keeps the site closed

SCN-03 DEVICE WINDOW

11:00–15:00 only; safety marshal, continuous accessible route and 60-second stop; near miss or public refusal returns the route.

Digital access cannot become a qualification for public service.

E01

Paper, phone, staffed desk and accessible web remain equivalent without mandatory account, device or AI.

E02

Only admitted fields may be collected; biometrics, continuous location, credit scoring and automatic enforcement are prohibited.

E03

Power, heat, noise, network isolation and paid maintenance labour precede operation.

E04

Utilities, emergency, fire, cyber, procurement and capacity require qualified professional review.

Longer opening is not automatically better; ecology, rest, cleaning and restoration define capacity.

E01

PUBLIC-168 and GREEN-168 form a continuous design spine, but geometry and area remain provisional.

E02

Quiet 22:00–06:00; noise, light, footfall and waste have human checks and complaint triggers.

E03

Continuous accessible passage, free lingering, children/older users and nonparticipants remain protected.

E04

No device trial proceeds without an ecological baseline; water, trees and habitat require specialist review.

Railway memory lives through time, sightlines, scale, material and reversible storytelling.

E01

Navy carries accountability and rail memory; orange marks opening; red only marks stop and exit.

E02

A seven-column × twenty-four-row grid forms the 168 identity without mimicking official signs.

E03

Heritage audio must be rights-cleared and have text/silent equivalents.

E04

Sightlines, materials, luminance and advertising limits await heritage review.

ZHONGZHIYUAN — MODEL VALIDATION GARDEN

A severable safety loop from admission and isolated testing to public failure review.

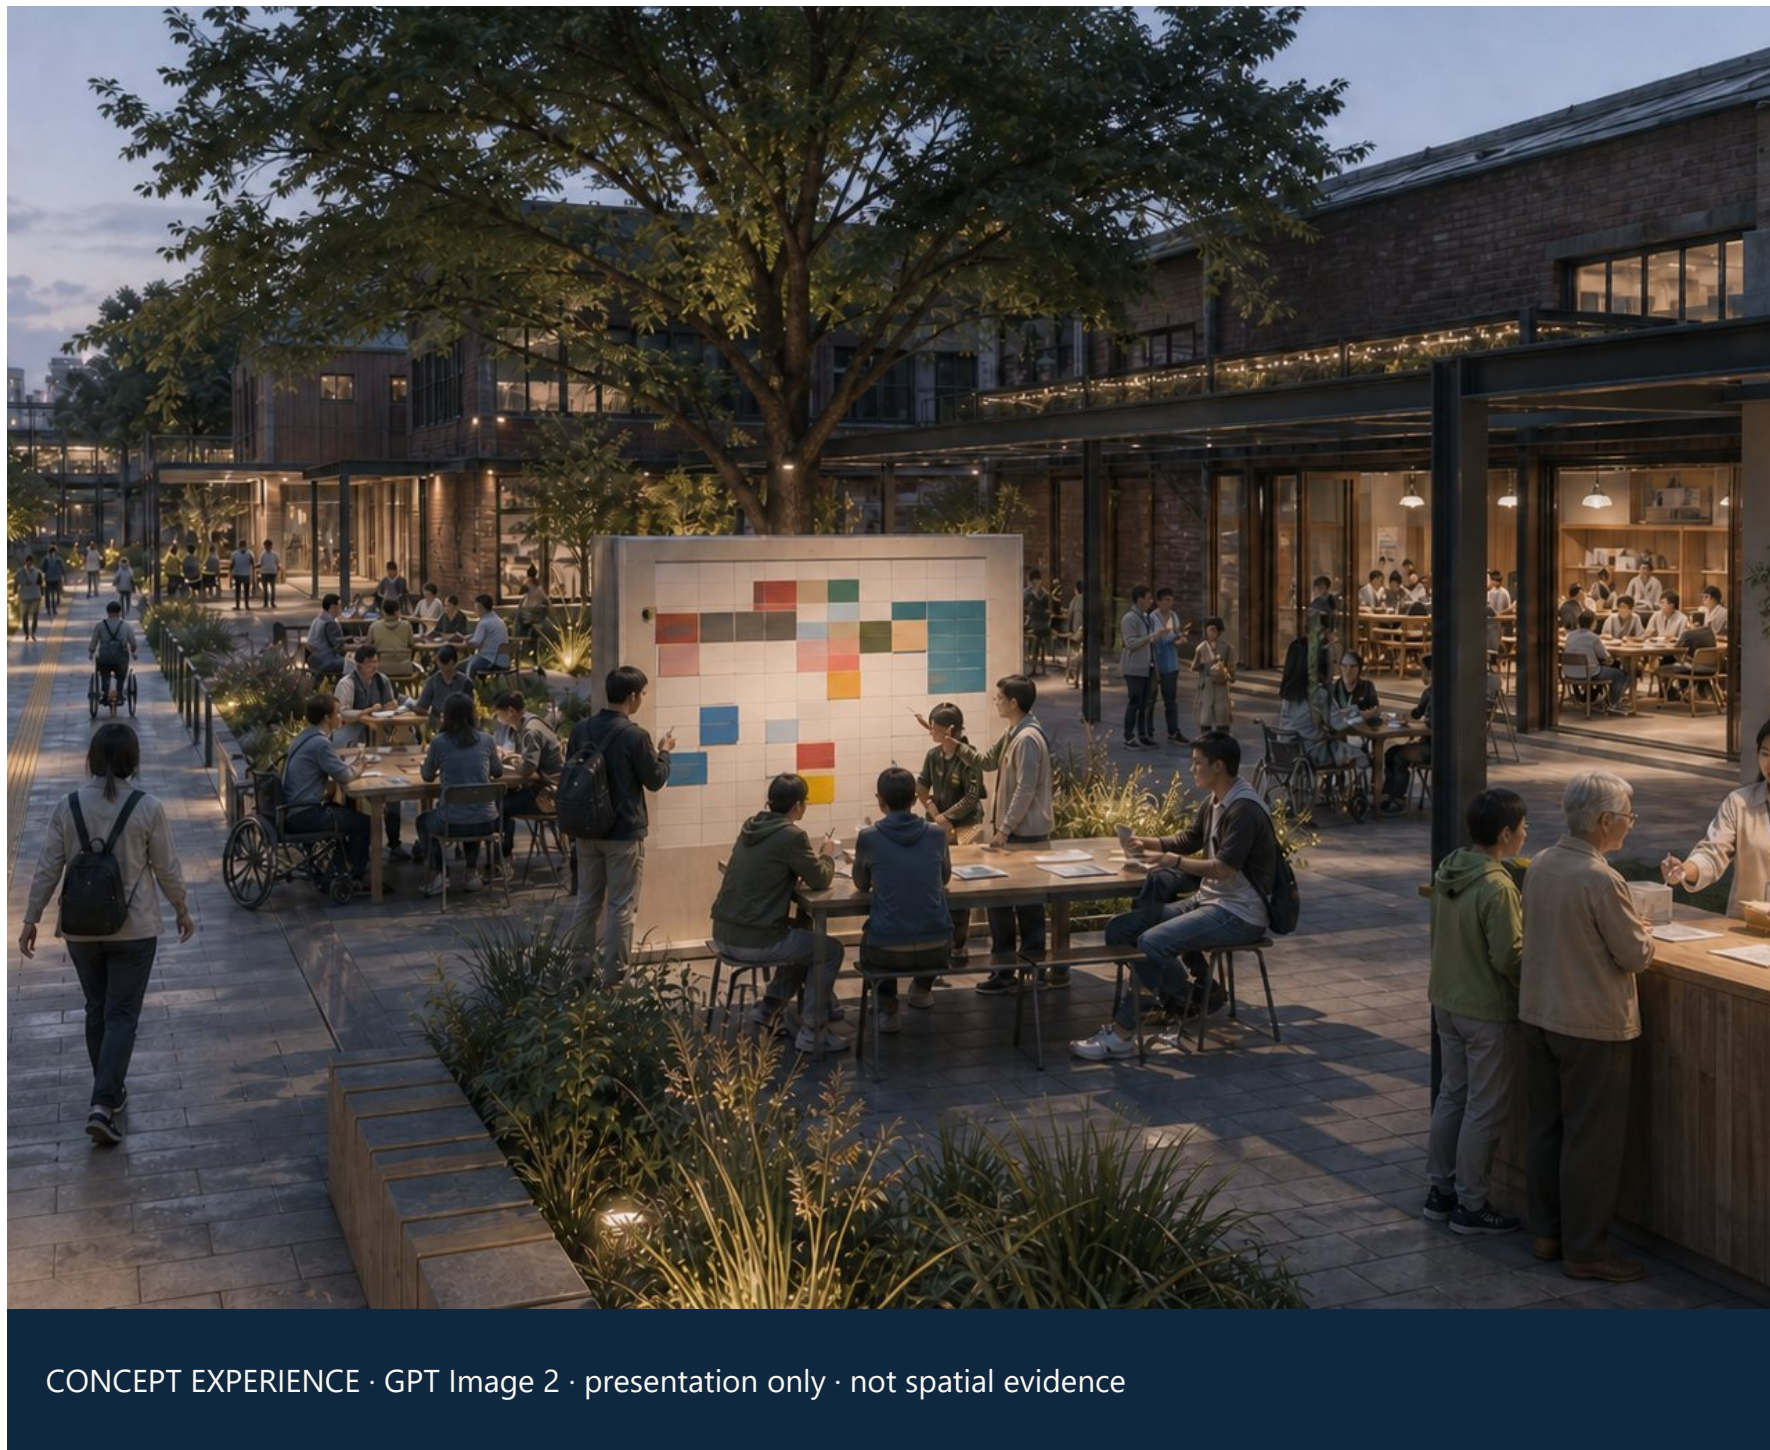

CONCEPT EXPERIENCE · GPT Image 2 · presentation only · not spatial evidence

- SCN-01 synthetic-data clinic, SCN-02 red-team workshop, SCN-04 edge-energy sandbox.
- Sensitive data, production links, heat/noise or missing maintenance trigger shutdown.
- Quiet edges protect neighbors/ecology; reset marks keep temporary installations removable.

AI ORIGIN — KNOWLEDGE INTERCHANGE

17/24

Research vacancy, translation, access navigation and night school share a timed ground floor.

CONCEPT EXPERIENCE · GPT Image 2 · presentation only · not spatial evidence

- SCN-05 translation, SCN-07 access, SCN-08 night school, SCN-09 lab time bank.
- Eligibility, IP, health and legal decisions always transfer to a person.
- Day supports transfer, evening serves learners/community, weekend connects maintainers/families.

DAZHONGSI — OPEN CITY LOUNGE

Interchange, culture and public service stitch four station quadrants while protecting quiet and passage.

CONCEPT EXPERIENCE · GPT Image 2 · presentation only · not spatial evidence

- SCN-03 robot window, SCN-06 health navigation, SCN-10 heritage voice, SCN-11 quiet street, SCN-12 model room.
- Devices 11:00–15:00 only; events end by 21:00; low light after 22:00.
- Every activity has a human lead, physical stop, restoration and public appeal.

Youth, residents, disabled visitors, researchers, founders and maintenance workers are rights checks, not marketing personas.

E01

Every card records operator, affected people, nonparticipant impact and non-AI baseline.

E02

Minimum data, human gate, SLO, stop, restore, receipt and review trigger are mandatory.

E03

No-device, no-account and no-AI choices cannot lower service quality.

E04

Cleaning, safety, guidance and maintenance hours are capacity, never hidden by automation.

Four tests and eight civic services ask whether a scene can enter, pause, restore, appeal and archive.
