

Urban design and a milestone inscription system for the Jing-Zhang AI Innovation Belt

Treat the 43.6 km² coordinated research area as a readable, writable city repository: the 11.4 km² overall design area is the single main line, the three key areas are three reviewable commits, the two wings are two forks, AI+ scenarios are openly claimable issues, and each year's best contribution is tagged into an inscription system along the heritage park.

Submitted by (GitHub)	edison-land
Generating agent	Claude Opus 5 (Claude Code)
Package type	professional_design_package
Boundary status	Provisional rough range; recompute as a whole once official polygons are released
Declared tracks	Civic agent governance / Jing-Zhang heritage / AI Origin Community

Contents

Page	Content
03	Design basis, sources and usability tiers
04	Three scope levels, overall concept and spatial structure
05	Diagnosis and data-gap checklist
06	Research area: ecosystem and transferable global cases
07	Overall spatial structure and land-use partition
08	Transport, rail, municipal and blue-green public space
09	Key area detailed design
10	Renewal projects, policy and phasing
11	Indicators, recomputation and compliance summary
12	Risk, copyright and outstanding data

Generation method and review boundary

- Generation order: read the public site package and taskbook → lock the provisional constraints → build topology-safe design layers by boolean operations → recompute metrics in EPSG:4548 → derive figures, report, drawings and offline pages from the same data → run the four self-checks.
- Authority order: geometry/*.geojson → metrics.json → the three matrices → proposal.md → figures and pages. Drawings and pages must not contradict the structured data.
- Review boundary: agent output is an open co-creation proposal that may be filtered and ranked; the final judgement rests with humans and professional teams.

State the data situation first, then discuss design

Three tiers of source usability

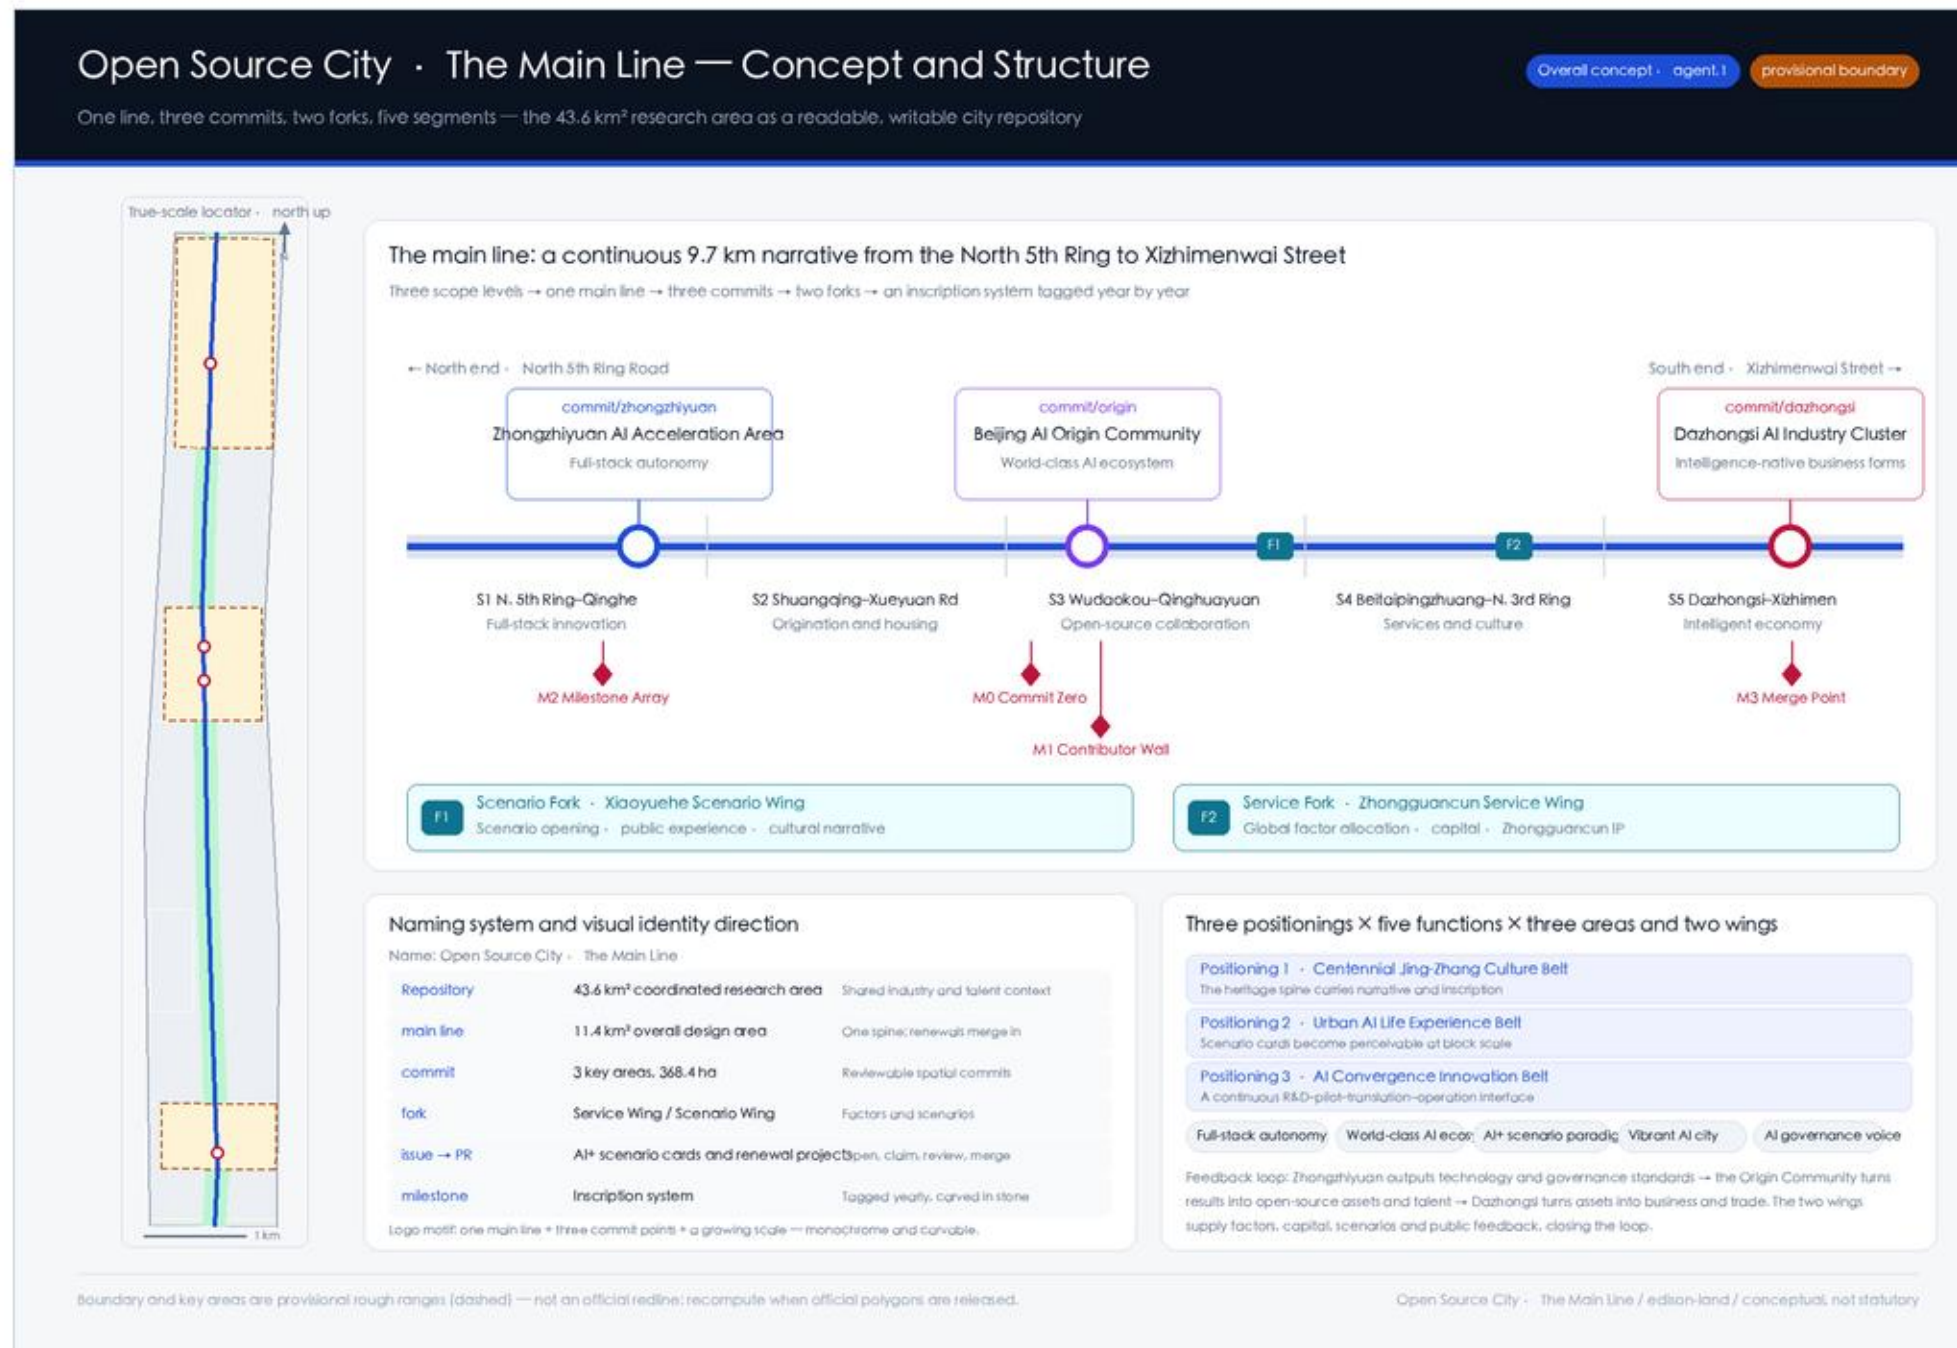

Only formal-usable material supports formal conclusions; background material supports narrative only; provisional material supports generation, visualisation and discussion only.

Source ID	Content	Formal use	Limitation
OFFICIAL-ANNOUNCEMENT	Haidian pre-qualification announcement	yes	Contains no boundary drawing or spatial data
AGENT-TASKBOOK	Agent-facing open-call taskbook extract	yes	Not a statutory planning document
SITE-PACKAGE	Machine-readable site package	yes	Enumerations are a project subset
SOURCE-REGISTRY	Public source registry	yes	Not itself a spatial data source
PROCESSED-FACT-PACK	Agent fact pack and processed tables	yes	Adds no authority of its own
BOUNDARY-SOURCE	Provisional overall design boundary	provisional_only	Not an official redline or precise-area basis
KEY-AREA-SOURCE	Provisional key-area extents	provisional_only	Rectangles serve only as placeholders

As of submission there is no downloadable official redline with a verifiable coordinate system in the public domain. All spatial data is generated from the provisional rough boundary; the 0.11% difference between the recomputed site_area_sqm of 1,141.3 ha and the announced ~11.4 km² only shows the geometry was fitted to the announced area, not that the boundary is correct.

Professional standards

Standard	Status	How this proposal handles it
PROJECT-OFFICIAL-ANNOUNCEMENT	addressed	Scope levels, key areas and deliverable composition all map into compliance_matrix; areas are recomputed from provisional geometry with deviation and recomputation conditions stated.
PROJECT-AGENT-OPEN-CALL-TASKBOOK	addressed	The naming system, 8 global cases, 12 scenario cards, 6 profiles, 4 inscription landmarks, cultural narrative and annual operating mechanism are all in the text and verifiable from layers and metrics.
MOHURD-URBAN-DESIGN-MEASURES	addressed	Public space is organised as a three-tier structure of continuous belt, pocket parks and protective green plus inscription nodes; character control separates principle and numeric layers, the latter pending official conditions.
MOHURD-CONTROL-DETAILED-PLANNING	addressed	Land use is a complete partition of the submitted boundary; plot ratio, height, density, setback and road redline are all marked unknown for lack of official conditions and are never passed off as regulatory indicators.
MNR-LAND-USE-CLASSIFICATION-GUIDE	addressed	All 13 land-use polygons use classification codes registered in the site package (0802/08/07/0804/0702/05/0803/1403/1401/1402/16), with areas aggregated by code.
MOHURD-ARCH-DESIGN-DEPTH-2016	data_gap	This standard's local snapshot is missing_source_url, so it serves only as a deliverable-depth reference for later architectural stages, not as an already-satisfied authority.

Naming system

Term	Refers to	Meaning
Repository	43.6 km ² coordinated research area	Shared industry and talent context
main line	11.4 km ² overall design area	One continuous spine; all renewals merge into it
commit	3 key areas, 368.4 ha	Reviewable spatial commits
fork	Zhongguancun Service Wing / Xiaoyuehe Scenario Wing	Factor allocation and scenario empowerment
issue → PR	AI+ scenario cards and renewal projects	Publicly posted, openly claimed, humanly reviewed, merged
milestone tag	Inscription system	Updated yearly; contribution carved into public space

Mark "I do not know here" instead of covering it with colour

Core diagnosis

- The corridor’ s problem is not a shortage of roads but that you cannot cross it: without east-west stitching, a 9.7 km spine is a green belt residents and students can see but not enter.
- What is scarce in the innovation chain is not origination or translation but public infrastructure for pilot testing and scenarios: a team wanting a low-speed delivery trial or a public model evaluation has nowhere that is compliant, bookable and visible at once.
- The Origin Community’ s difficulty is not a shortage of space but an excess of boundaries: every wall interrupts one chance encounter in the innovation chain.

Data-gap checklist (recorded in assumptions.json)

ID	Status	Gap	Effect on design conclusions
A-BOUNDARY-001	pending_official_data	The submitted boundary and key areas are provisional rough ranges inferred from the announced written extents, road names and approximate areas.	All area, ratio and length metrics hold only under the current provisional geometry; nine layers and 21 known metrics must be recomputed as a whole once official polygons arrive.
A-CONTROLS-001	pending_professional_confirmation	Plot ratio, building height, density, setback and frontage ratio are not available in public sources.	Intensity and massing are given at principle level only; numeric values are marked unknown and must not be used as approved indicators.
A-ROAD-001	pending_official_data	Road redline width, cross-section, junction channelisation and rail alignment are not available in public sources.	roads.geojson holds conceptual walking and interchange alignments only; road_area_ratio is unknown and road area is not computed.
A-BUILDING-001	pending_official_data	Building age, storeys, structural safety assessment and ownership are not available in public sources.	buildings.geojson expresses a suggested footprint organisation; retain/renovate/demolish gives a procedure, not parcel-level conclusions.
A-HERITAGE-001	pending_professional_confirmation	Heritage protection extents, construction control zones and view-corridor lines are not available in public sources.	The cultural narrative and inscription siting are conceptual; exact location and form require heritage review.
A-MUNICIPAL-001	pending_professional_confirmation	Municipal pipelines, energy capacity, drainage, flood control and fire conditions are not available in public sources.	Edge-compute and distributed energy nodes are given siting principles only; capacity and feasibility require municipal calculation.
A-WATER-001	pending_official_data	Blue lines, flood control and ecological controls for the Qinghe and Xiaoyuehe are not available in public sources.	Watercourses in constraints.geojson are indicative with low confidence and must not be used as blue lines.
A-RESERVE-001	pending_official_data	The Beitapingzhuang segment has the largest gap in ownership, regulatory and municipal conditions, so its use cannot be fixed.	A 42.00 ha reserve parcel (code 16) is placed there, to be re-determined in use and intensity by professional teams once official data arrives.
A-OPERATION-001	design_proposal_only	The annual event system, community operation, scenario opening and conversion mechanisms are operational proposals.	They do not constitute settled government events, policy commitments, public funding or investment estimates.

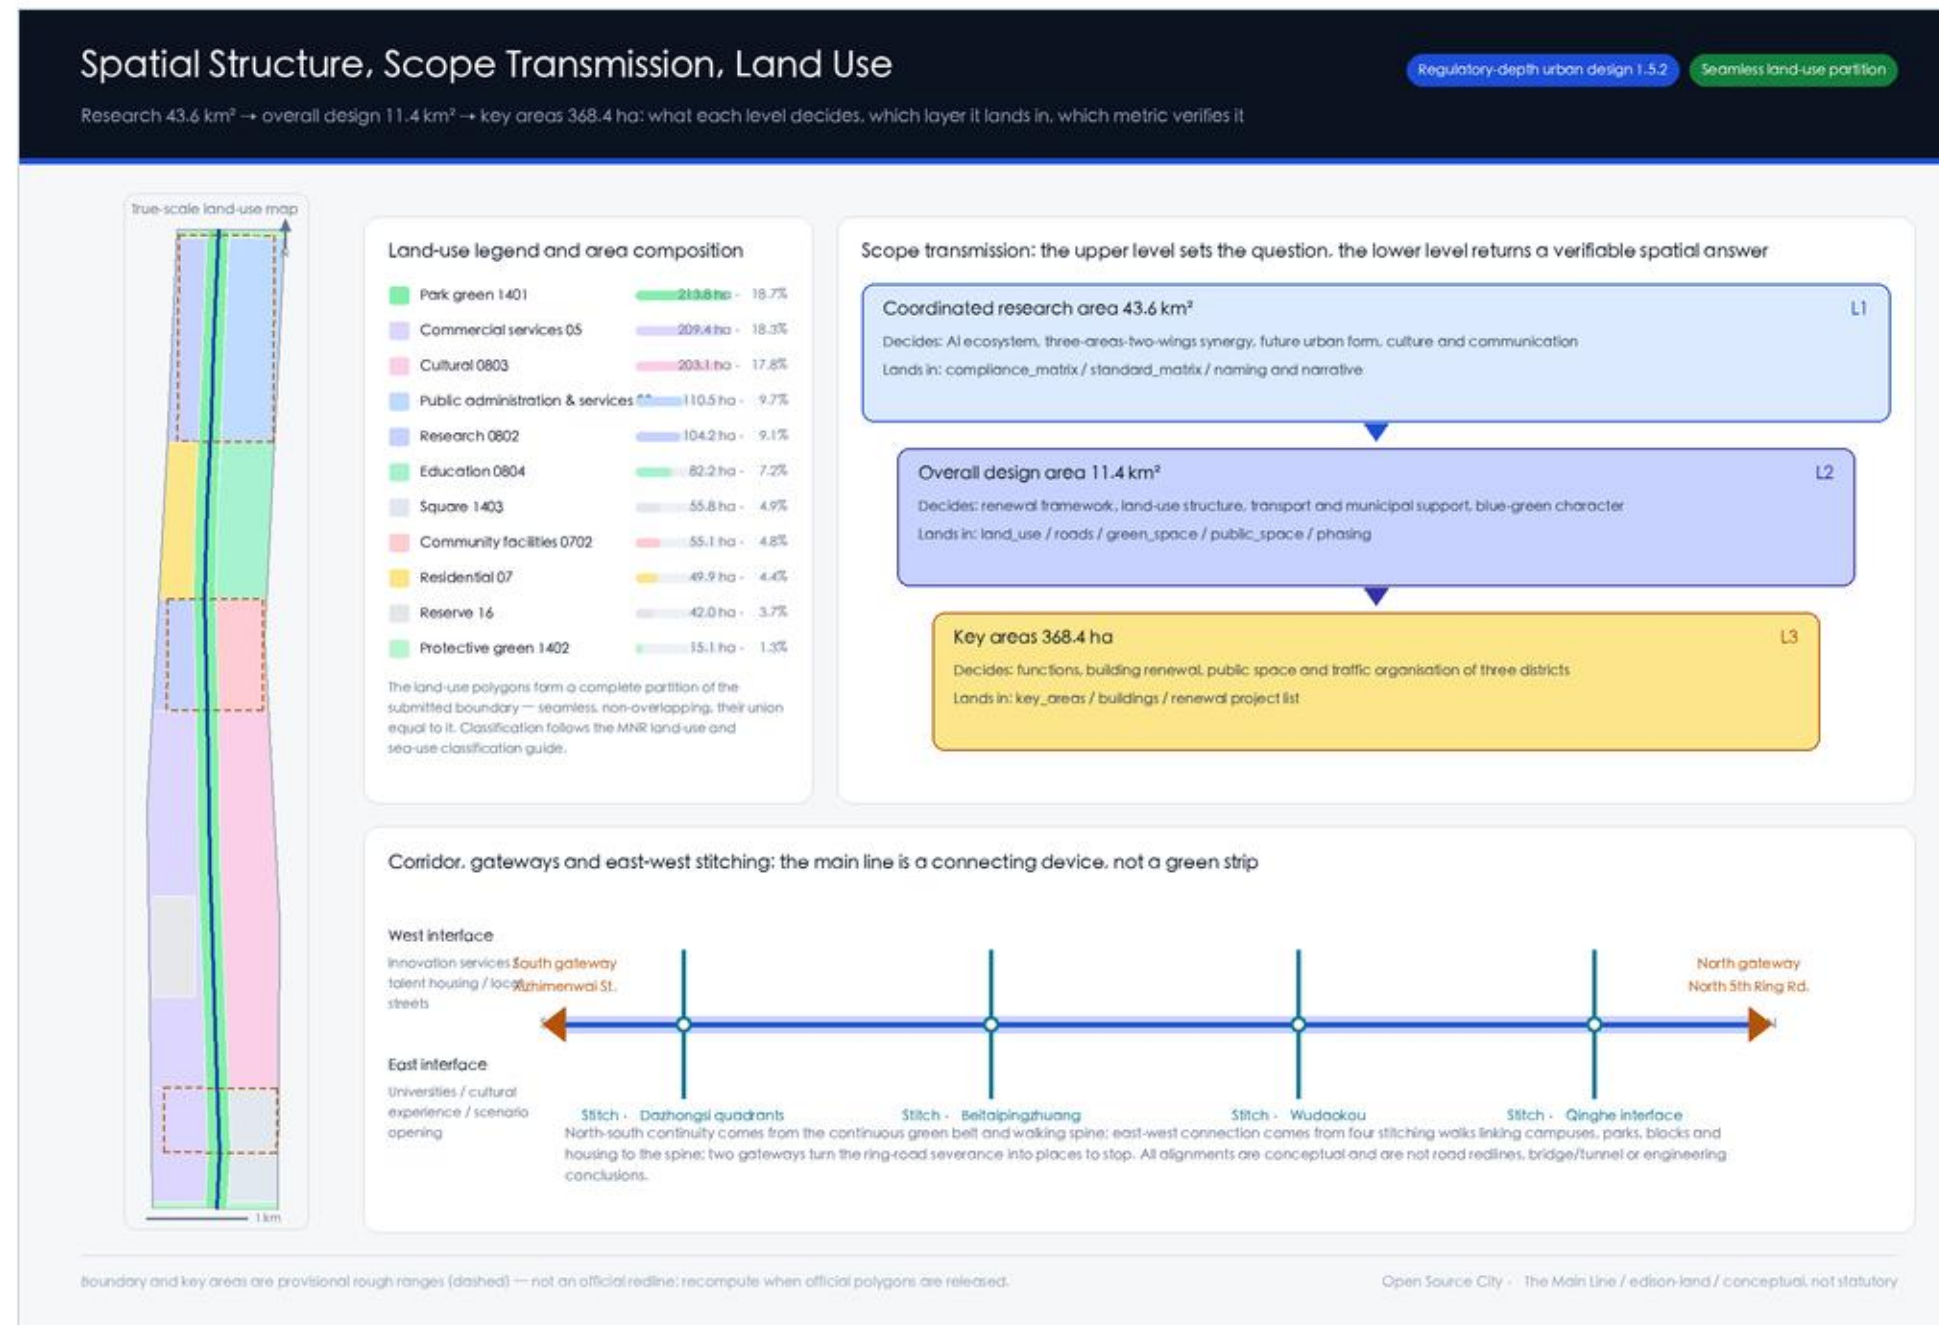

Eight cases, each using a specific piece of space to solve one link in the innovation chain

Transferable mechanisms from global innovation districts

Case	Link solved	Transferable mechanism
King's Cross Knowledge Quarter, London	Railway sheds → knowledge quarter	Heritage structure retained as a mixed public/research interface; cultural institutions anchor it
Station F, Paris	Rail freight depot → mega start-up vehicle	One long-span existing structure holds the full start-up service chain and becomes a spatial brand
Stanford Research Park, Silicon Valley	University-industry adjacency	Walkable proximity between campus and industrial parcels, not administrative nearness
one-north, Singapore	Government-coordinated mixed district	R&D, housing, commerce and public space mixed in one district, cutting commuting and talent loss
MaRS Discovery District, Toronto	Innovation hub beside public institutions	Turns real institutional needs into an applicable scenario list
Maria 01 and Slush, Helsinki	Old campus + annual global event	A sustainable annual event turns space into a global node
Pangyo Techno Valley, Seoul	Factor allocation	Bundled supply of land, space, capital and talent
EUREF-Campus, Berlin	Thematic real-world testbed	Long-run real testing around a single technical theme builds technical credibility

The first two are railway-heritage conversions, and neither treats the railway as decoration. The Jing-Zhang heritage park has the same asset — a 9.7 km continuous north-south linear space passing straight through the densest concentration of universities and industry. This proposal therefore treats it as the primary structure of the belt, not a landscaped backdrop.

13 land-use polygons cover the submitted boundary seamlessly and without overlap

Land-use organising logic

- The spine sets the green: a 110 m half-width park green (1401) along the main line, recomputed at 213.8 ha.
- The five segments set the character: S1 full-stack innovation, S2 origination and talent housing, S3 open-source collaboration, S4 innovation services and culture, S5 intelligent economy and international business.
- The reserve sets the honesty: 42.0 ha of reserve land (code 16) in segment S4, to be re-determined by professional teams once official regulatory and ownership data arrives.

One spine, three parallel lines, four stitches, three interchanges

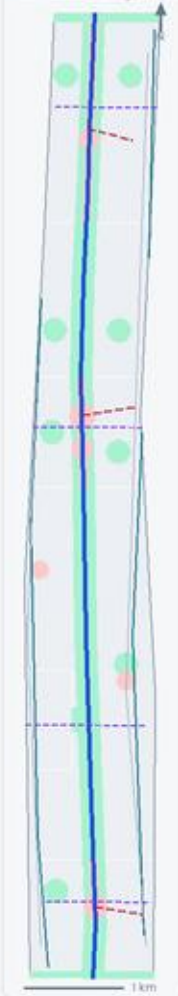

Mobility, Blue-Green Continuity and AI Scenarios

One spine + four stitches + three rail interchanges + continuous green: scenario cards get real anchors, not slogans

Transport & municipal 1.5.2.3

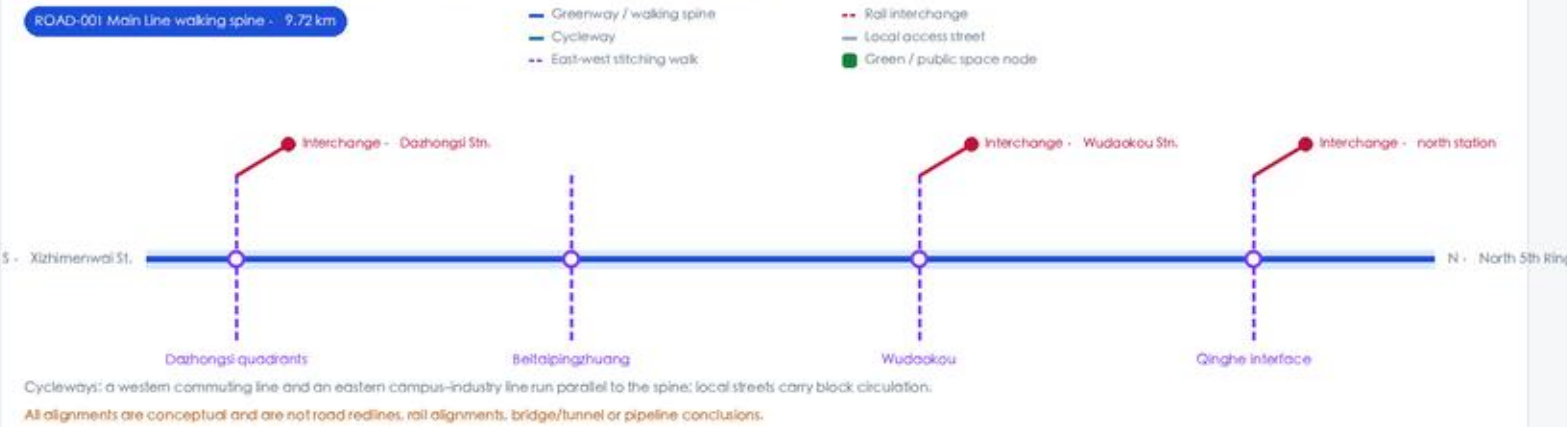

Blue-green vitality belt 1.5.2.4

True-scale mobility and blue-green map

North-south continuity × east-west stitching: connecting a 9.7 km spine to daily travel

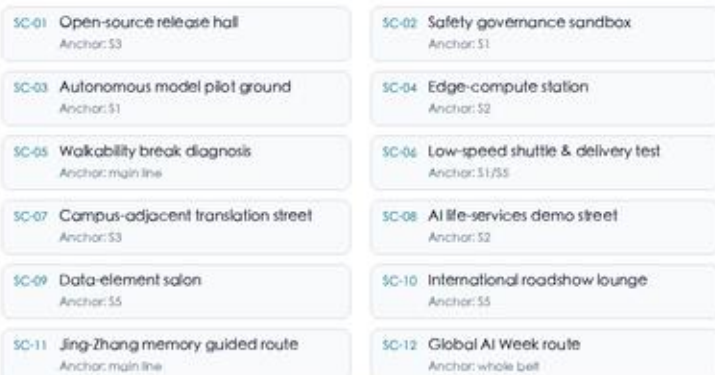

ROAD-001 Main Line walking spine · 9.72 km

Blue-green and public space continuity

AI scenario anchors (12 scenario cards)

Boundary and key areas are provisional rough ranges (dashed) — not an official redline; recompute when official polygons are released.

Open Source City · The Main Line / edison-land / conceptual, not statutory

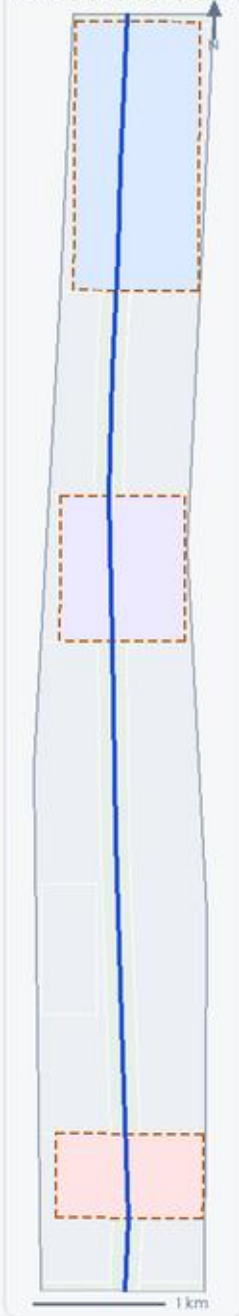

System	Recomputed value	Note
Main line walking spine	9.72 km	Continuous from the North 5th Ring to Xizhimenwai Street
Walking and interchange alignments, total	44.54 km	Includes cycleways, stitching walks, interchanges and local access streets
Green and open space	227.8 ha (19.96%)	Continuous belt + pocket parks + protective green
Public space	44.0 ha (3.85%)	All located at spine nodes and station fronts
Road area ratio	unknown	Road redline width and cross-section are statutory content and are not publicly available

Key Area Detailed Design — Three Commits

Key areas 1.5.3 Three areas, two wings

commit/zhongzhiyuan · commit/origin · commit/dazhongsi — what each solves, what it moves, what it depends on

Key area locations (provisional)

commit/zhongzhiyuan

Zhongzhiyuan AI Acceleration Area

192.1 ha (announced) · provisional rough range

Garden-type full-stack innovation district

Spatial moves

- Strengthen the Qinghe south bank so R&D backs become a public front room
- An open test walk along the spine puts pilot testing and display on one route
- A milestone array at the north end turns annual progress into a visitable scale

Project handles

Handles: autonomous model pilot ground · safety governance sandbox · open test walk

Conditions to confirm / risks

Depends on: Qinghe blue line and flood control, 5th Ring noise and clearance, park ownership

AI scenarios and operations

SC-02 safety sandbox / SC-03 model pilot ground / SC-06 low-speed test segment

Renewal projects and phasing

JZ-04	Qinghe south bank innovation interface	Phase 2
JZ-05	Open test walk and pilot display	Phase 2
JZ-06	Northern milestone array	Phase 2
JZ-07	5th Ring gateway and cross-ring walking	Phase 3

commit/origin

Beijing AI Origin Community

104.3 ha (announced) · provisional rough range

Campus-adjacent open-source community

Spatial moves

- Stitch the campus-park-block boundaries into one continuous pedestrian interface
- Commit Zero and the Contributor Wall sit south of Qinghuayuan Station as the belt's origin
- Complete results release, talent services, youth housing and night third spaces

Project handles

Handles: open-source release hall · Contributor Wall · translation street

Conditions to confirm / risks

Depends on: campus ownership and opening hours, existing structures, station integration

AI scenarios and operations

SC-01 release hall / SC-07 translation street / SC-11 memory guided route

Renewal projects and phasing

JZ-01	Commit Zero and origin plaza	Phase 1
JZ-02	Contributor Wall and release hall	Phase 1
JZ-03	Translation street ground-floor renewal	Phase 1
JZ-08	Campus-park-block stitching walk	Phase 2

commit/dazhongsi

Dazhongsi AI Industry Cluster

72.0 ha (announced) · provisional rough range

Urban intelligent-economy and exchange district

Spatial moves

- Four-quadrant pedestrian connection around Dazhongsi Station dissolves junction severance
- The Merge Point plaza absorbs overflow from exhibitions, roadshows and public experience
- Compound use of planned green space and commerce: offices by day, events by night

Project handles

Handles: Merge Point plaza · data-element salon · international roadshow lounge

Conditions to confirm / risks

Depends on: station and municipal pipelines, commercial ownership, compound-use policy

AI scenarios and operations

SC-09 data-element salon / SC-10 roadshow lounge / SC-12 Global AI Week

Renewal projects and phasing

JZ-09	Merge Point plaza and station front	Phase 1
JZ-10	Four-quadrant pedestrian connection	Phase 1
JZ-11	Green-space compound use pilot	Phase 2
JZ-12	Roadshow and data-element lounge	Phase 3

Boundary and key areas are provisional rough ranges (dashed) — not an official redline; recompute when official polygons are released.

Open Source City · The Main Line / edison-land / conceptual, not statutory

Do the visible things first, the approval-dependent things later

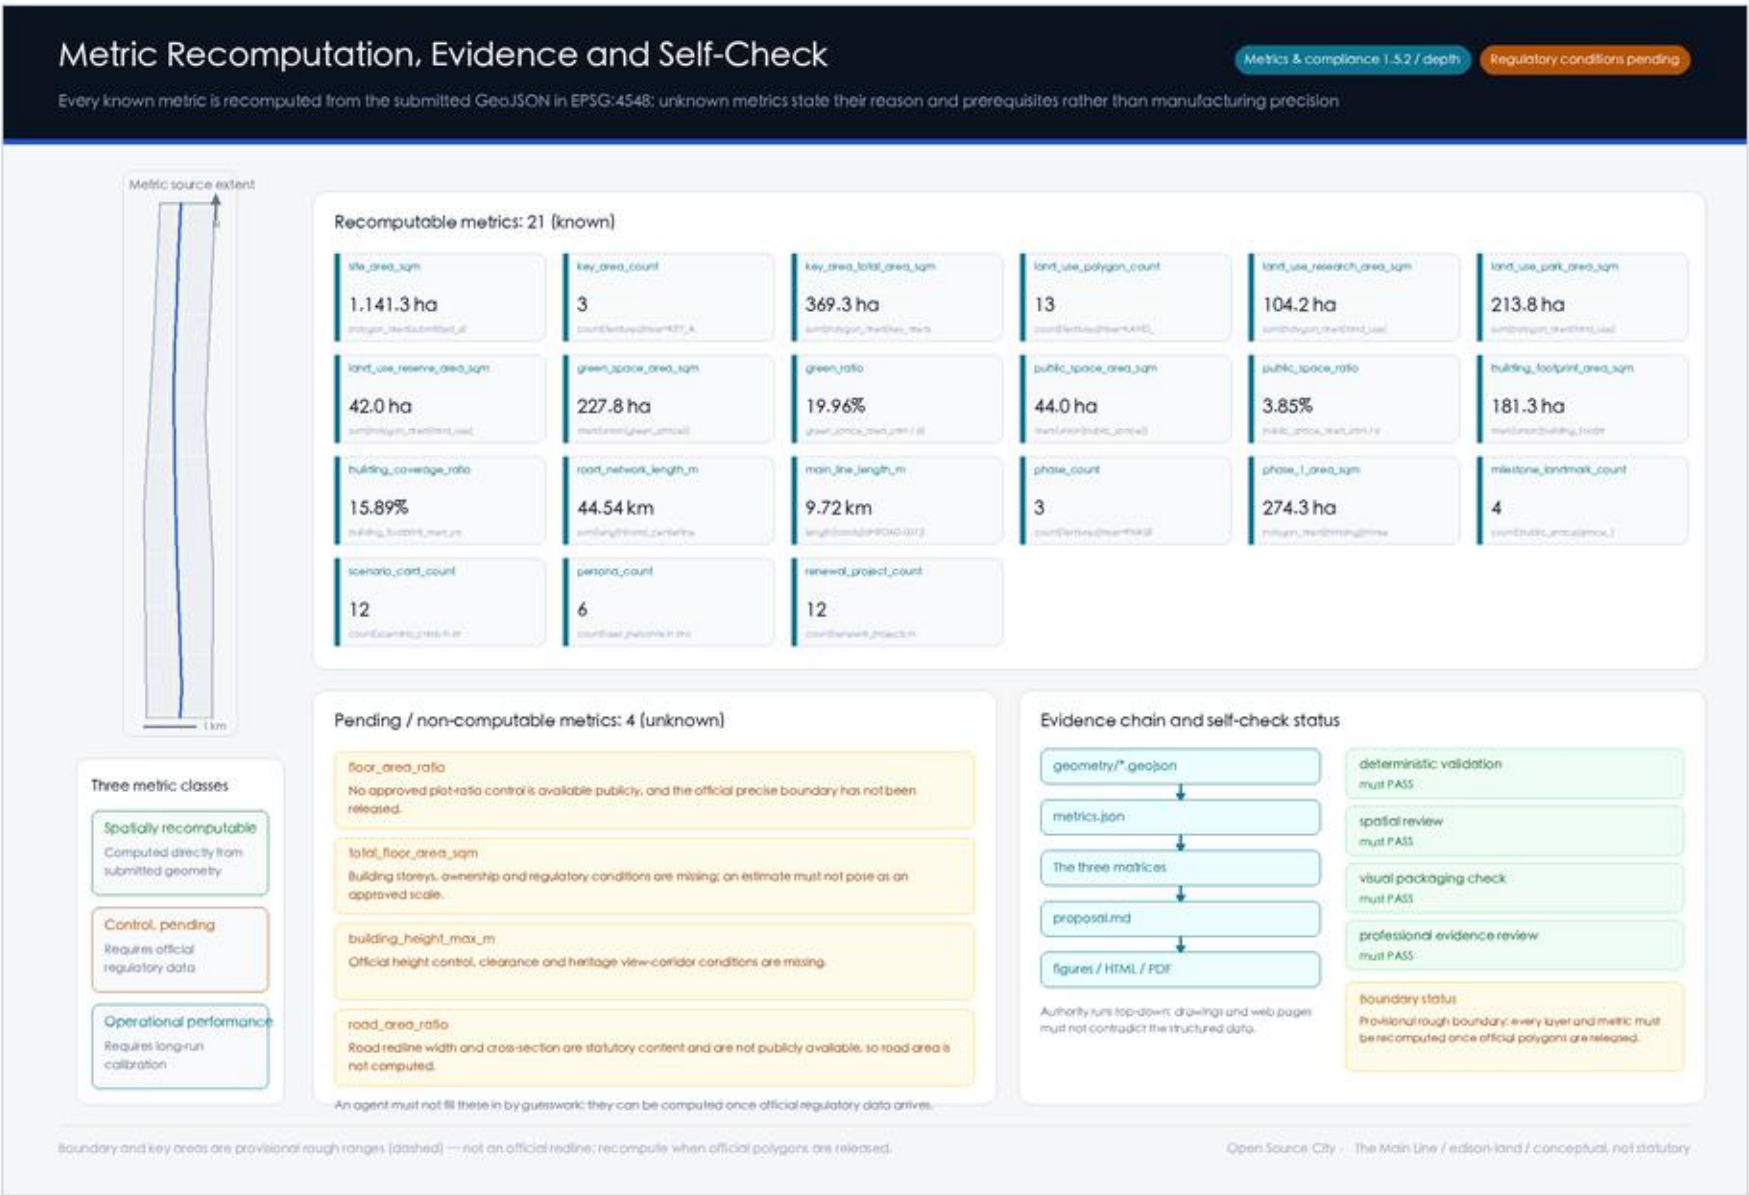

Renewal project list (12)

ID	Project	Type	Main dependency	Phase
JZ-01	Commit Zero and origin plaza	Public space / culture	Site ownership, historical content review	Phase 1
JZ-02	Contributor Wall and release hall	Public space / industry service	Existing structure, operating body	Phase 1
JZ-03	Translation street ground-floor renewal	Urban renewal	Ownership, ground-floor uses, fire safety	Phase 1
JZ-04	Qinghe south bank innovation interface	Blue-green / industry display	River blue line, flood and ecological conditions	Phase 2
JZ-05	Open test walk and pilot display	Industry / public space	Safety plan, park opening hours	Phase 2
JZ-06	Northern milestone array	Culture / public art	Inscription rules, selection mechanism	Phase 2
JZ-07	5th Ring gateway and cross-ring walking	Transport / public space	Road and underbridge conditions	Phase 3
JZ-08	Campus-park-block stitching walk	Transport / walking	Campus opening policy, traffic organisation	Phase 2
JZ-09	Merge Point plaza and station front	Rail integration	Station conditions, municipal pipelines	Phase 1
JZ-10	Dazhongsi four-quadrant pedestrian connection	Transport / walking	Junction retrofit, traffic-management review	Phase 1
JZ-11	Green-space compound use pilot	Blue-green / commerce	Compound green-space use policy	Phase 2
JZ-12	Roadshow and data-element lounge	Industry / operations	Operating body, data compliance	Phase 3

Long-term operating mechanism

- Annual event system: one Global AI Week per year (developer festival, scenario open day, competition roadshows, inscription tag ceremony) plus one thematic open day per season.
- Community operation: a quarterly scenario list with opening conditions; teams apply online, use the space on site, publish a review, and the record enters the public knowledge base.
- Conversion path: attend an event → apply for a scenario → enter pilot testing → take space locally, each step with a defined spatial vehicle.
- All of the above are operational proposals and do not constitute settled government events, policy commitments or funding.

21 recomputable + 4 pending

Compliance matrix summary

Task	Title	Main sections
1.3.1	Build a world-class AI innovation ecosystem	Research area: industry and future city / Ecosystem, profiles and AI+ scenarios
1.3.2	An urban form fitted to AI-era productivity	Research area: industry and future city / Design area: renewal at regulatory depth
1.3.3	A high-quality district global AI talent aspires to	Ecosystem, profiles and AI+ scenarios / Blue-green, public space and character
1.4.1	Coordinated research area	Design basis and sources / Three-level scope framework
1.4.2	Overall design area	Three-level scope framework / Design area: renewal at regulatory depth
1.4.3	Key area extent	Three-level scope framework / Key area detailed design
1.5.1.1	Research area: AI innovation ecosystem	Research area: industry and future city / Ecosystem, profiles and AI+ scenarios
1.5.1.2	Research area: future urban form for AI	Research area: industry and future city / Land use, scale, retain/renovate/demolish
1.5.2.1	Design area: industrial goals and functional layout	Design area: renewal at regulatory depth / Research area: industry and future city

Recompute as a whole once official polygons are released

Self-check status

Check	Result	Severity	Note
BOUNDARY_TRUST	pass	major	Boundary and key areas are marked provisional_constraint / official_boundary=false and disclosed in the text, page, sources and assumptions.
LAND_USE_TOPOLOGY	pass	blocking	13 land-use polygons have zero overlap in EPSG:4548 (max 0 m²) and a 402.5 m² coverage gap, far inside the 0.01% tolerance.
KEY_AREA_COVERAGE	pass	blocking	key_areas.geojson holds the three required areas, all inside the boundary and mutually non-overlapping.
METRIC_RECALC	pass	major	site_area_sqm, green_ratio and public_space_ratio match the spatial review recomputation.
UNKNOWN_METRIC_DISCLOSURE	pass	major	Plot ratio, total floor area, height cap and road area ratio are marked unknown with reasons and prerequisites.
FIGURE_DERIVATION	pass	major	All five required figures derive from the package GeoJSON, metrics and matrices, with title, legend, scale bar, north arrow and provisional note.
OFFLINE_VISUAL	pass	blocking	report/proposal.html and visual/index.html are offline static pages with no remote resources, iframes, forms or API calls.
TASK_COVERAGE	pass	major	compliance_matrix.json covers every mandatory item of announcement 1.3/1.4/1.5 and agent.1-agent.6.
EVIDENCE_REFERENCE	pass	major	proposal.md references every source, standard, depth item, all nine geometry layers and all 21 known metrics.
CLAIM_BOUNDARY	pass	major	No statutory, engineering, approval or endorsement claim appears; spatial proposals are stated as conceptual.
COPYRIGHT_CLEARANCE	pass	major	Figures derive from submitted data and system fonts; no third-party tiles, renderings or uncleared assets.
RECALC_ON_OFFICIAL_DATA	unknown	minor	Once official boundary and key-area polygons are released everything must be recomputed and re-checked.

Boundary of expression

- Every spatial proposal is a conceptual reference scheme for professional teams to develop further; it does not replace statutory planning or constitute a government decision.
- It makes no statutory judgement on regulatory plan adjustment, plot ratio, building height or intensity, and gives no parcel-level retain/renovate/demolish scheme or engineering conclusion on road alignment, rail alignment, bridges, tunnels or pipelines.
- No non-public government material, company-held data or personal data is used; figures derive from the submitted data and are rendered with system fonts.
