

Overall Spatial Structure and Evidence Chain

ONE SPINE · FOUR STITCHES · THREE CORES

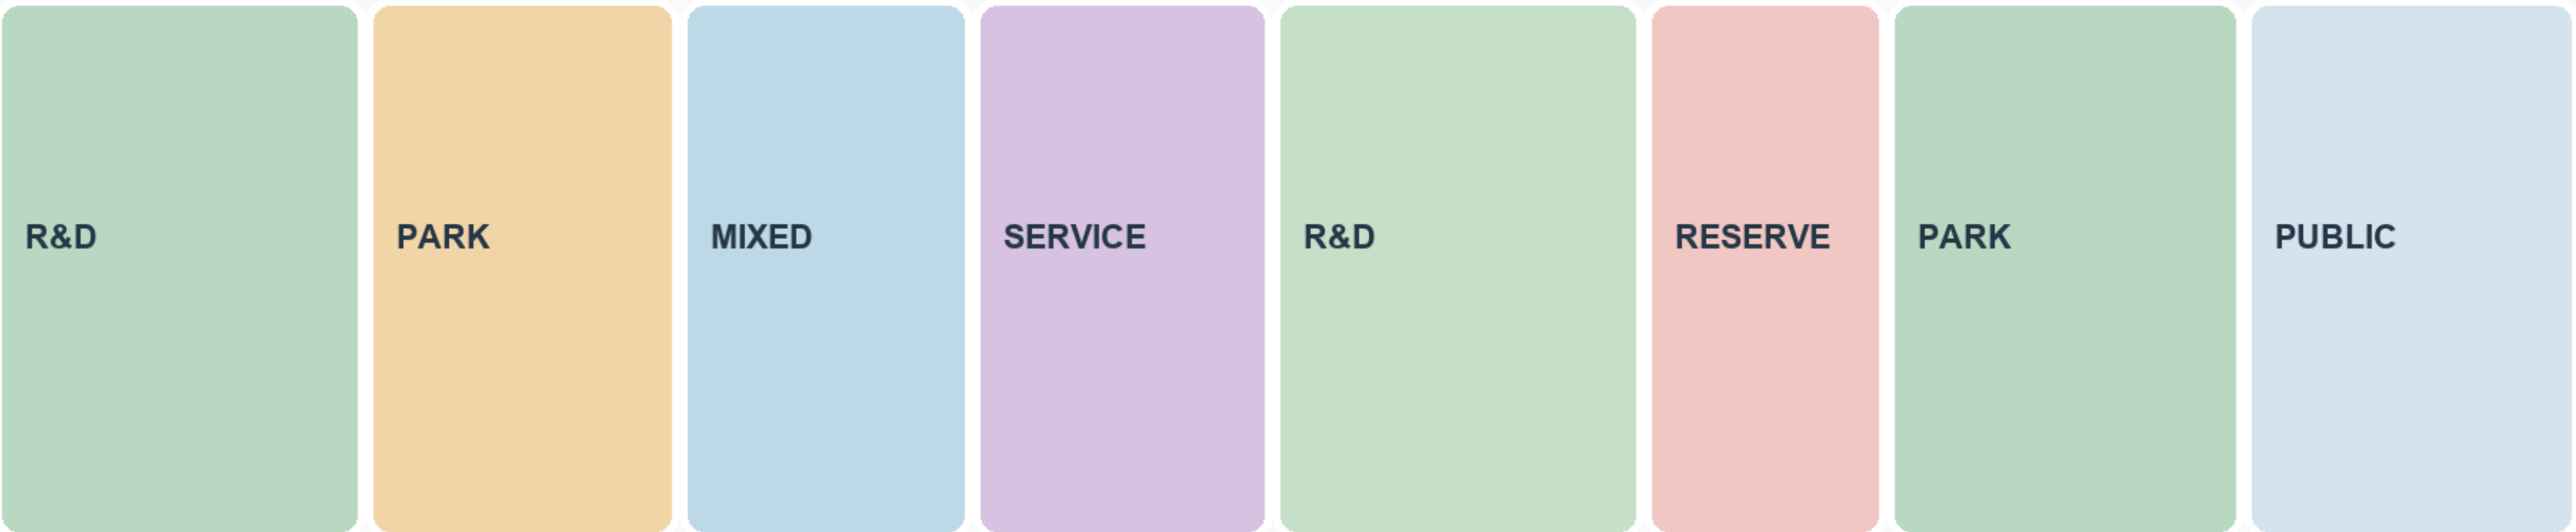

A continuous heritage-park spine reconnects the corridor north-to-south. Four east-west public-space stitches repair access across rail, ring-road and campus barriers. Three key areas anchor innovation, open-source community life and transit-oriented exchange.

Boundary status: provisional_rough · official_boundary=false · Recalculate the full package when official polygons are released.

Land-Use Structure and Zoning

R&D 21.02% · PARK GREEN SPACE 27.4% · PUBLIC SPACE 16.72%

21.02%
R&D

27.4%
PARK GREEN

16.72%
PUBLIC SPACE

Twenty shared-edge land-use units form a complete partition of the submitted boundary. R&D zones alternate with green space along the spine; mixed-use and public-service functions support key nodes; explicit reserve land absorbs future official-control adjustments.

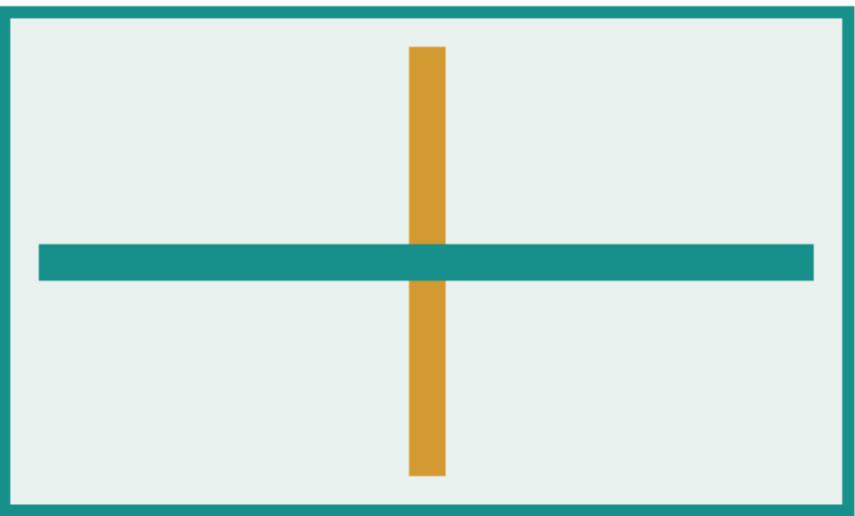

Machine evidence: geometry/land_use.geojson and metrics.json · No statutory FAR, height, coverage, setback or total floor-area values are asserted.

Detailed Design of Three Key Areas

ZHONGZHIYUAN · BEIJING AI ORIGIN COMMUNITY · DAZHONGSI

01

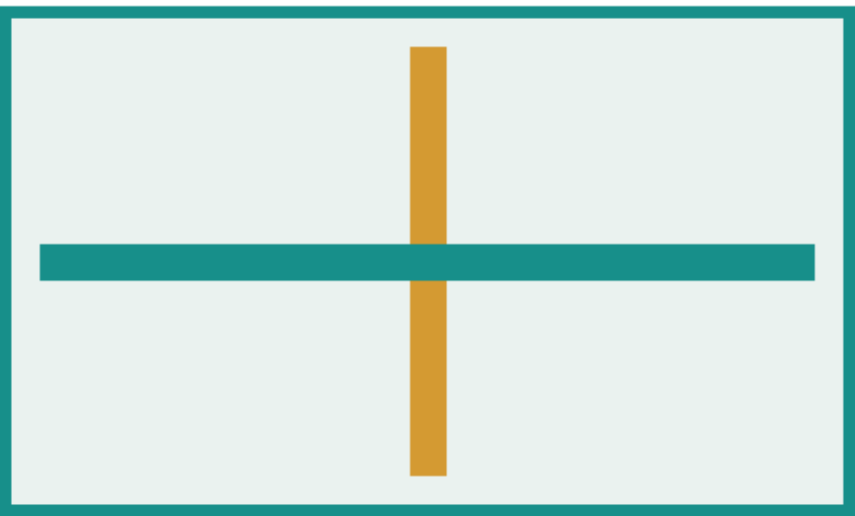

ZHONGZHIYUAN

Evaluation / standards / governance

02

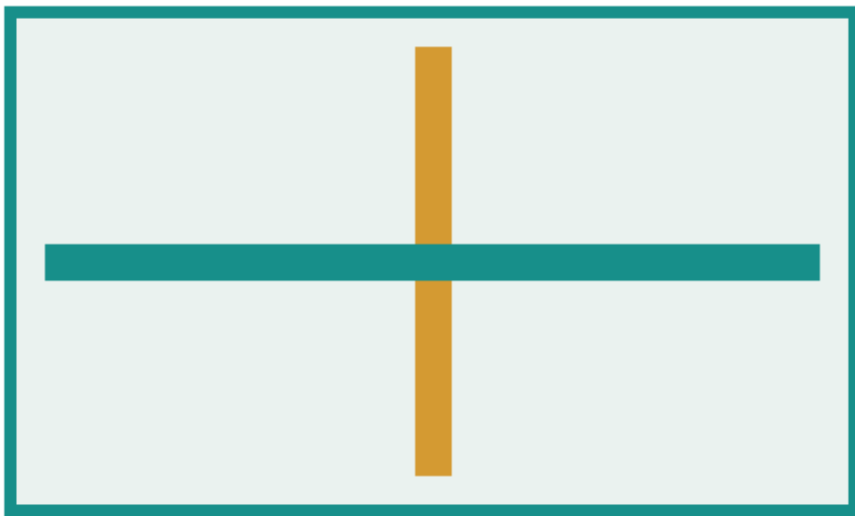

AI ORIGIN COMMUNITY

Open-Source Street / campus-city links

03

DAZHONGSI

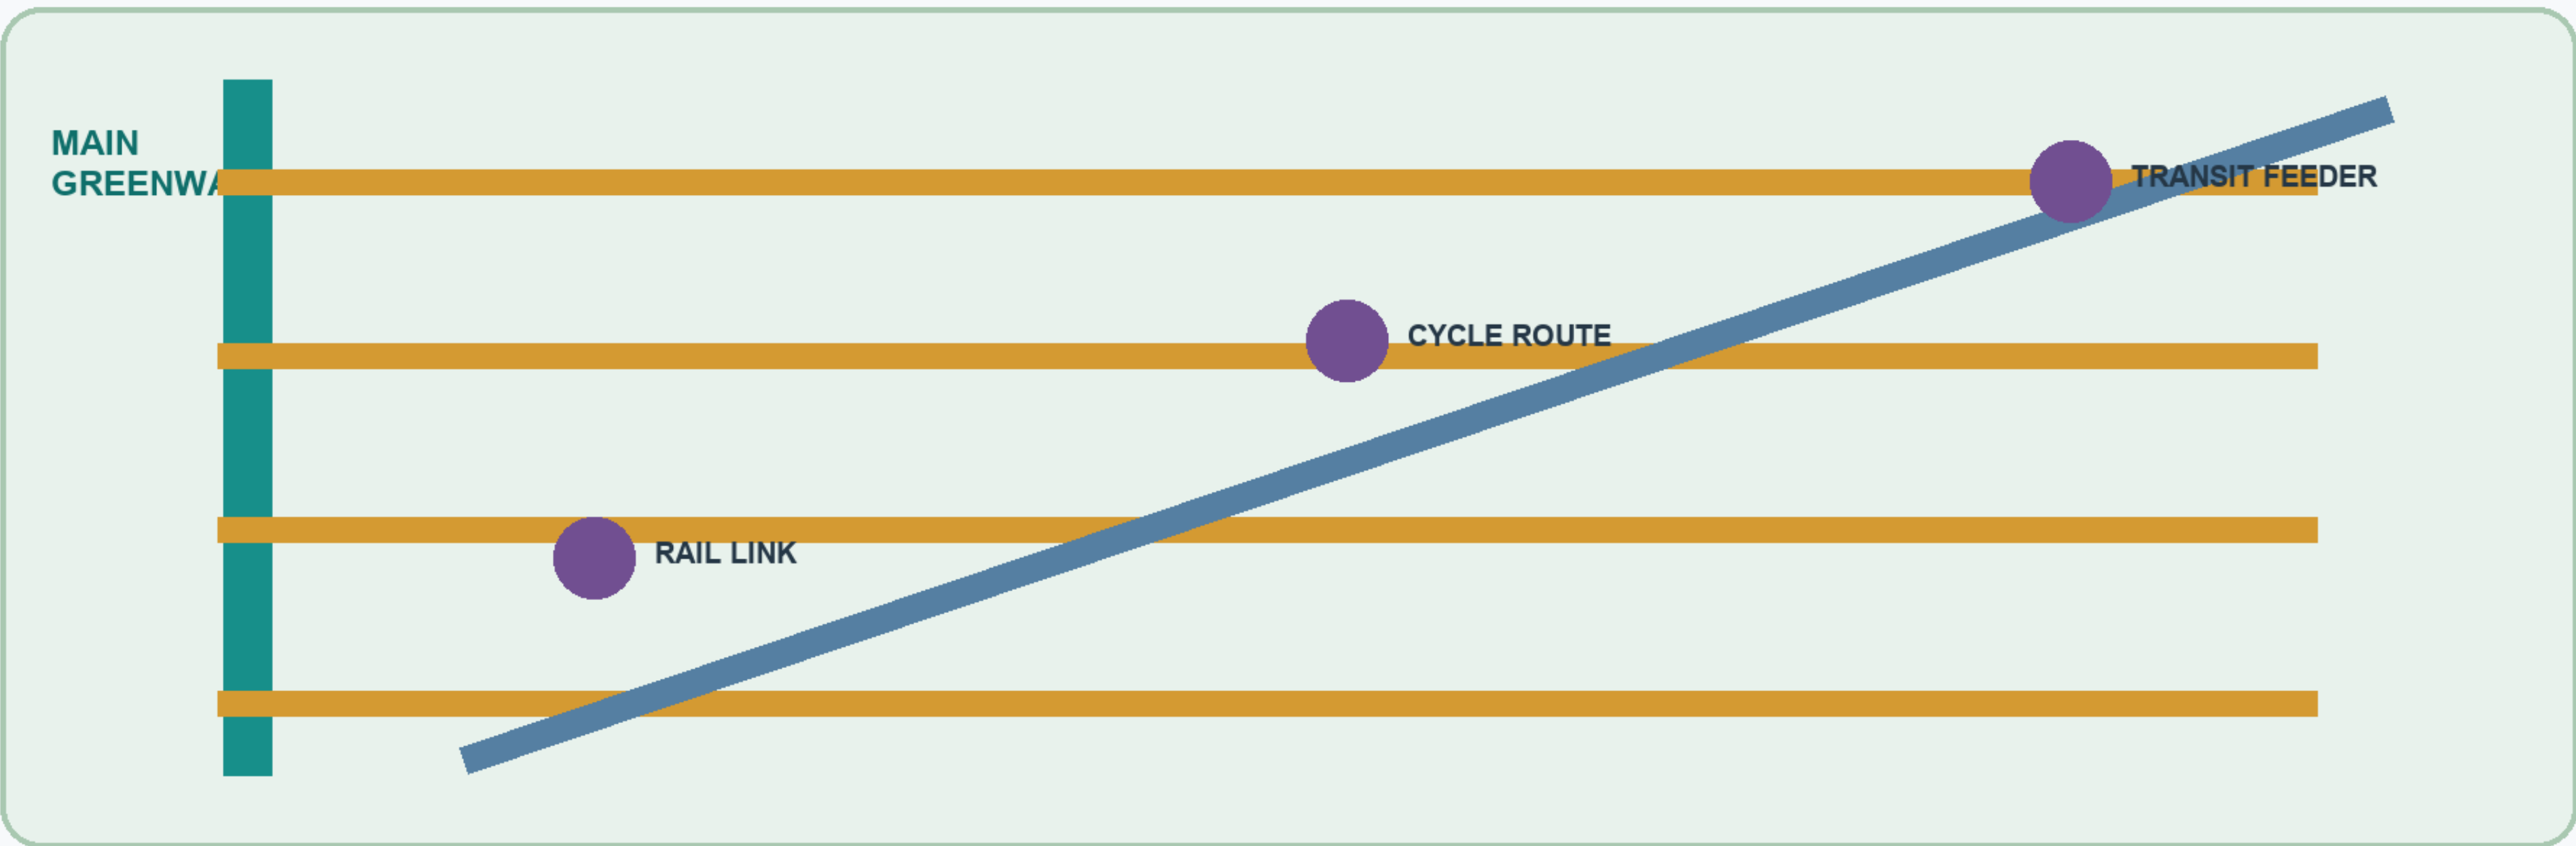

Four-quadrant pedestrian reconnection

Zhongzhiyuan makes evaluation, standards and governance visible at the waterfront interface. Beijing AI Origin Community connects campuses, firms and neighborhoods through an Open-Source Street. Dazhongsi prioritizes four-quadrant pedestrian reconnection before intensive construction.

All three polygons are provisional constraints. Detailed moves are conceptual recommendations for professional teams to deepen.

Walking, Cycling and Blue-Green Network

MAIN GREENWAY + FOUR EAST-WEST STITCHES + TRANSIT LINKS

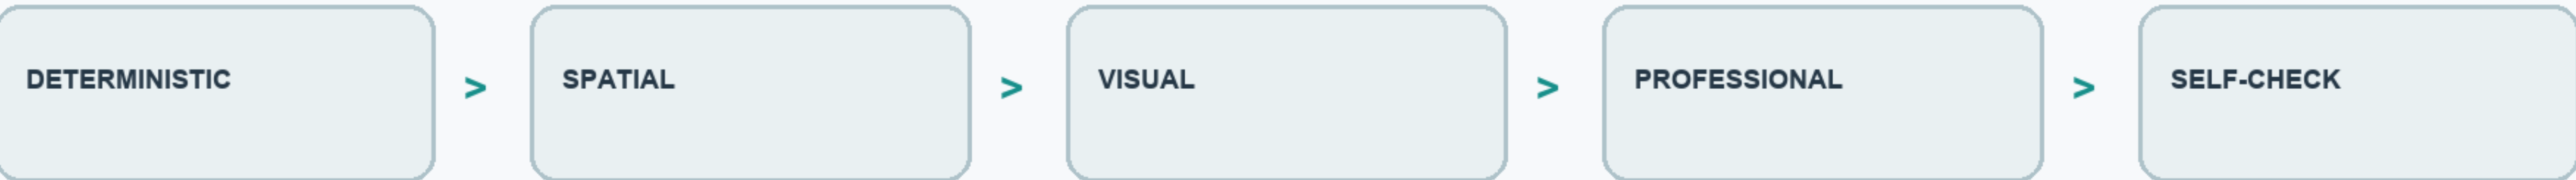

The mobility strategy repairs discontinuities before adding density: one north-south greenway, four east-west walking connections, a Qinghe south-bank cycle route and three transit feeder links. Green and public space work as access infrastructure, not decorative residuals.

Recalculated indicators: green ratio 33.11% · public-space ratio 16.72% · conceptual road centerline length 16,293 m.

Metrics, Recalculation and Review Evidence

35 KNOWN · 6 OFFICIAL-CONTROL PENDING · 3 OPERATIONS-DATA PENDING

Known spatial indicators are independently recalculated in EPSG:4548 from the submitted GeoJSON using union-based geometry logic. Statutory controls and performance indicators remain unknown until the necessary official or operational data exists.

Review chain: deterministic validation → spatial review → visual review → professional evidence review → contributor self-check.
