

THE MENDING BELT

京张缝合带

Mending the century-old corridor into ten crossable public grounds along real streets

The core judgment

The Jing-Zhang railway left Haidian two legacies: a spirit of self-reliant innovation worth commemorating, and a continuous ten-kilometre corridor running from the North Fifth Ring to Xizhimenwai Street that has threaded east and west together for a century.

This proposal therefore inverts the usual reading: the belt's first task is not to be walked along more pleasantly, but to become crossable again.

Four design moves

- One continuous heritage seam — public floor and walking spine
- Ten transverse stitches — six upgrades, four new links in measured gaps
- Paired frontages across the seam — complementary, not repeated
- An all-hours regime — one ground, several roles, no new buildings

The Mending Belt · Overall Structure

Mending the century-old corridor into ten crossable public grounds along real streets

01 / 05

— How to read this

The dark brown line is the surveyed Jing-Zhang (Jing-Bao) alignment from OSM, the structuring element of the belt; orange lines are the ten stitches, drawn along real street geometry: solid upgrades an existing crossing, dashed is a new link.

— Why transverse

Linear infrastructure privileges movement along it, leaving movement across it to be completed. This proposal mends across rather than promenading along.

— Anchored to real stations

Stitches marked with a dot are anchored to surveyed OSM station positions (Wudaokou, Qinghua East Rd West, Dazhongsi), not invented.

Legend

- Jing-Zhang corridor (OSM survey)
- Stitch: already continuous today (solid)
- Stitch: proposed new segment (dashed)
- Anchored to surveyed station
- Key area (indicative)
- Submitted scope (corridor-corrected)
- Repository rectangle (position to verify)
- Green / campus / water

Grey dashed line is the repository provisional rough scope — NOT an official redline; recompute the whole chain once official data is released

Base map: © OpenStreetMap contributors (ODbL), geographic reference only — not an official boundary or control basis | Scope: Haidian Branch announcement 2026-05-09 (written extents and approximate areas) | Geometry: agent-generated conceptual design

Conceptual suggestion · not statutory planning or an approval basis

Land Use · Paired Programme Across the Seam

Complementary rather than repeated uses on each side, making crossing a daily necessity

02 / 05

— Why pairing matters

Identical uses on both sides would reduce a stitch to unused decoration — the failure mode this proposal actively avoids.

— Seam is park green 1401

Plaza 1403 where stitches cross it; street ground 1207 on the two edges.

— Gap-free, overlap-free

110 polygons tile the submitted design area: 15.5 m² gap and 0.42 m² overlap, both within tolerance.

Legend

- West frontage
- Heritage seam 1401
- East frontage
- Transverse stitch
- Jing-Zhang corridor

Grey dashed line is the repository provisional rough scope — NOT an official redline; recompute the whole chain once official data is released

Conceptual suggestion · not statutory planning or an approval basis

Key Areas · Density Rhythm and Boundary Cross-check

Stitch density follows real crossing demand; the provisional-vs-surveyed gap is shown, not hidden

03 / 05

— Three dense, two sparse

Stitches are denser in the three key areas and wider apart along the link segments — density follows demand, not even spacing.

— A discrepancy found

The announcement names Dazhongsi station, but the provisional rectangle sits ~1.7 km south of the surveyed station. This proposal states it rather than hiding it.

— How it is handled

The provisional rectangle stays as a labelled constraint while stitches anchor to surveyed stations; recompute once official redlines land.

Legend

- Key area (proposed extent)
- Repository provisional rectangle
- Stitch
- Surveyed station (OSM)
- Discrepancy to verify

Conceptual suggestion · not statutory planning or an approval basis

Mobility, Blue-Green & the All-Hours Regime

One walking spine along the real corridor, ten transverse links; one ground, several roles

04 / 05

— At-grade continuity first

No footbridge or underpass substitute; step-free throughout.

— Alignments are conceptual

Not road redlines, rail alignments or engineering schemes.

— All-hours needs no new building

Only zoning, movable furniture and operating rules.

The same stitch ground switches role through zoning, movable furniture and operating rules — no new buildings

Grey dashed line is the repository provisional rough scope — NOT an official redline; recompute the whole chain once official data is released

Metrics & Evidence Chain

05 / 05

Known metrics recomputed from geometry; missing values declared, never estimated

Design area	11,400,000 m²	■	site_boundary.geojson
Green area	5,664,361 m²	■	green_space.geojson
Green ratio	0.497	■	green_space + site_boundary
Public space	1,231,563 m²	■	public_space.geojson
Public space ratio	0.108	■	public_space + site_boundary
Stitch count	10	■	public_space.geojson
Building footprint	462,694 m²	■	buildings.geojson
Land-use polygons	110	■	land_use.geojson
Floor area ratio	pending official data	■	—
Building height	pending official data	■	—

Every known metric is independently reproducible from this submission's GeoJSON in EPSG:4548; once official redlines arrive the whole chain is recomputed, not just the boundary file.
OSM serves as geographic reference and station cross-check only; it never enters area recomputation and is not an official boundary.
Task coverage: all announcement 1.3 / 1.4 / 1.5 tasks plus agent.1–agent.6; complete records live in the three matrices.

Grey dashed line is the repository provisional rough scope — NOT an official redline; recompute the whole chain once official data is released
