

JINGZHANG OPEN PLATFORMS

Everyday public AI interfaces along the completed
nine-kilometre park

PASS / STAY / GET THINGS DONE

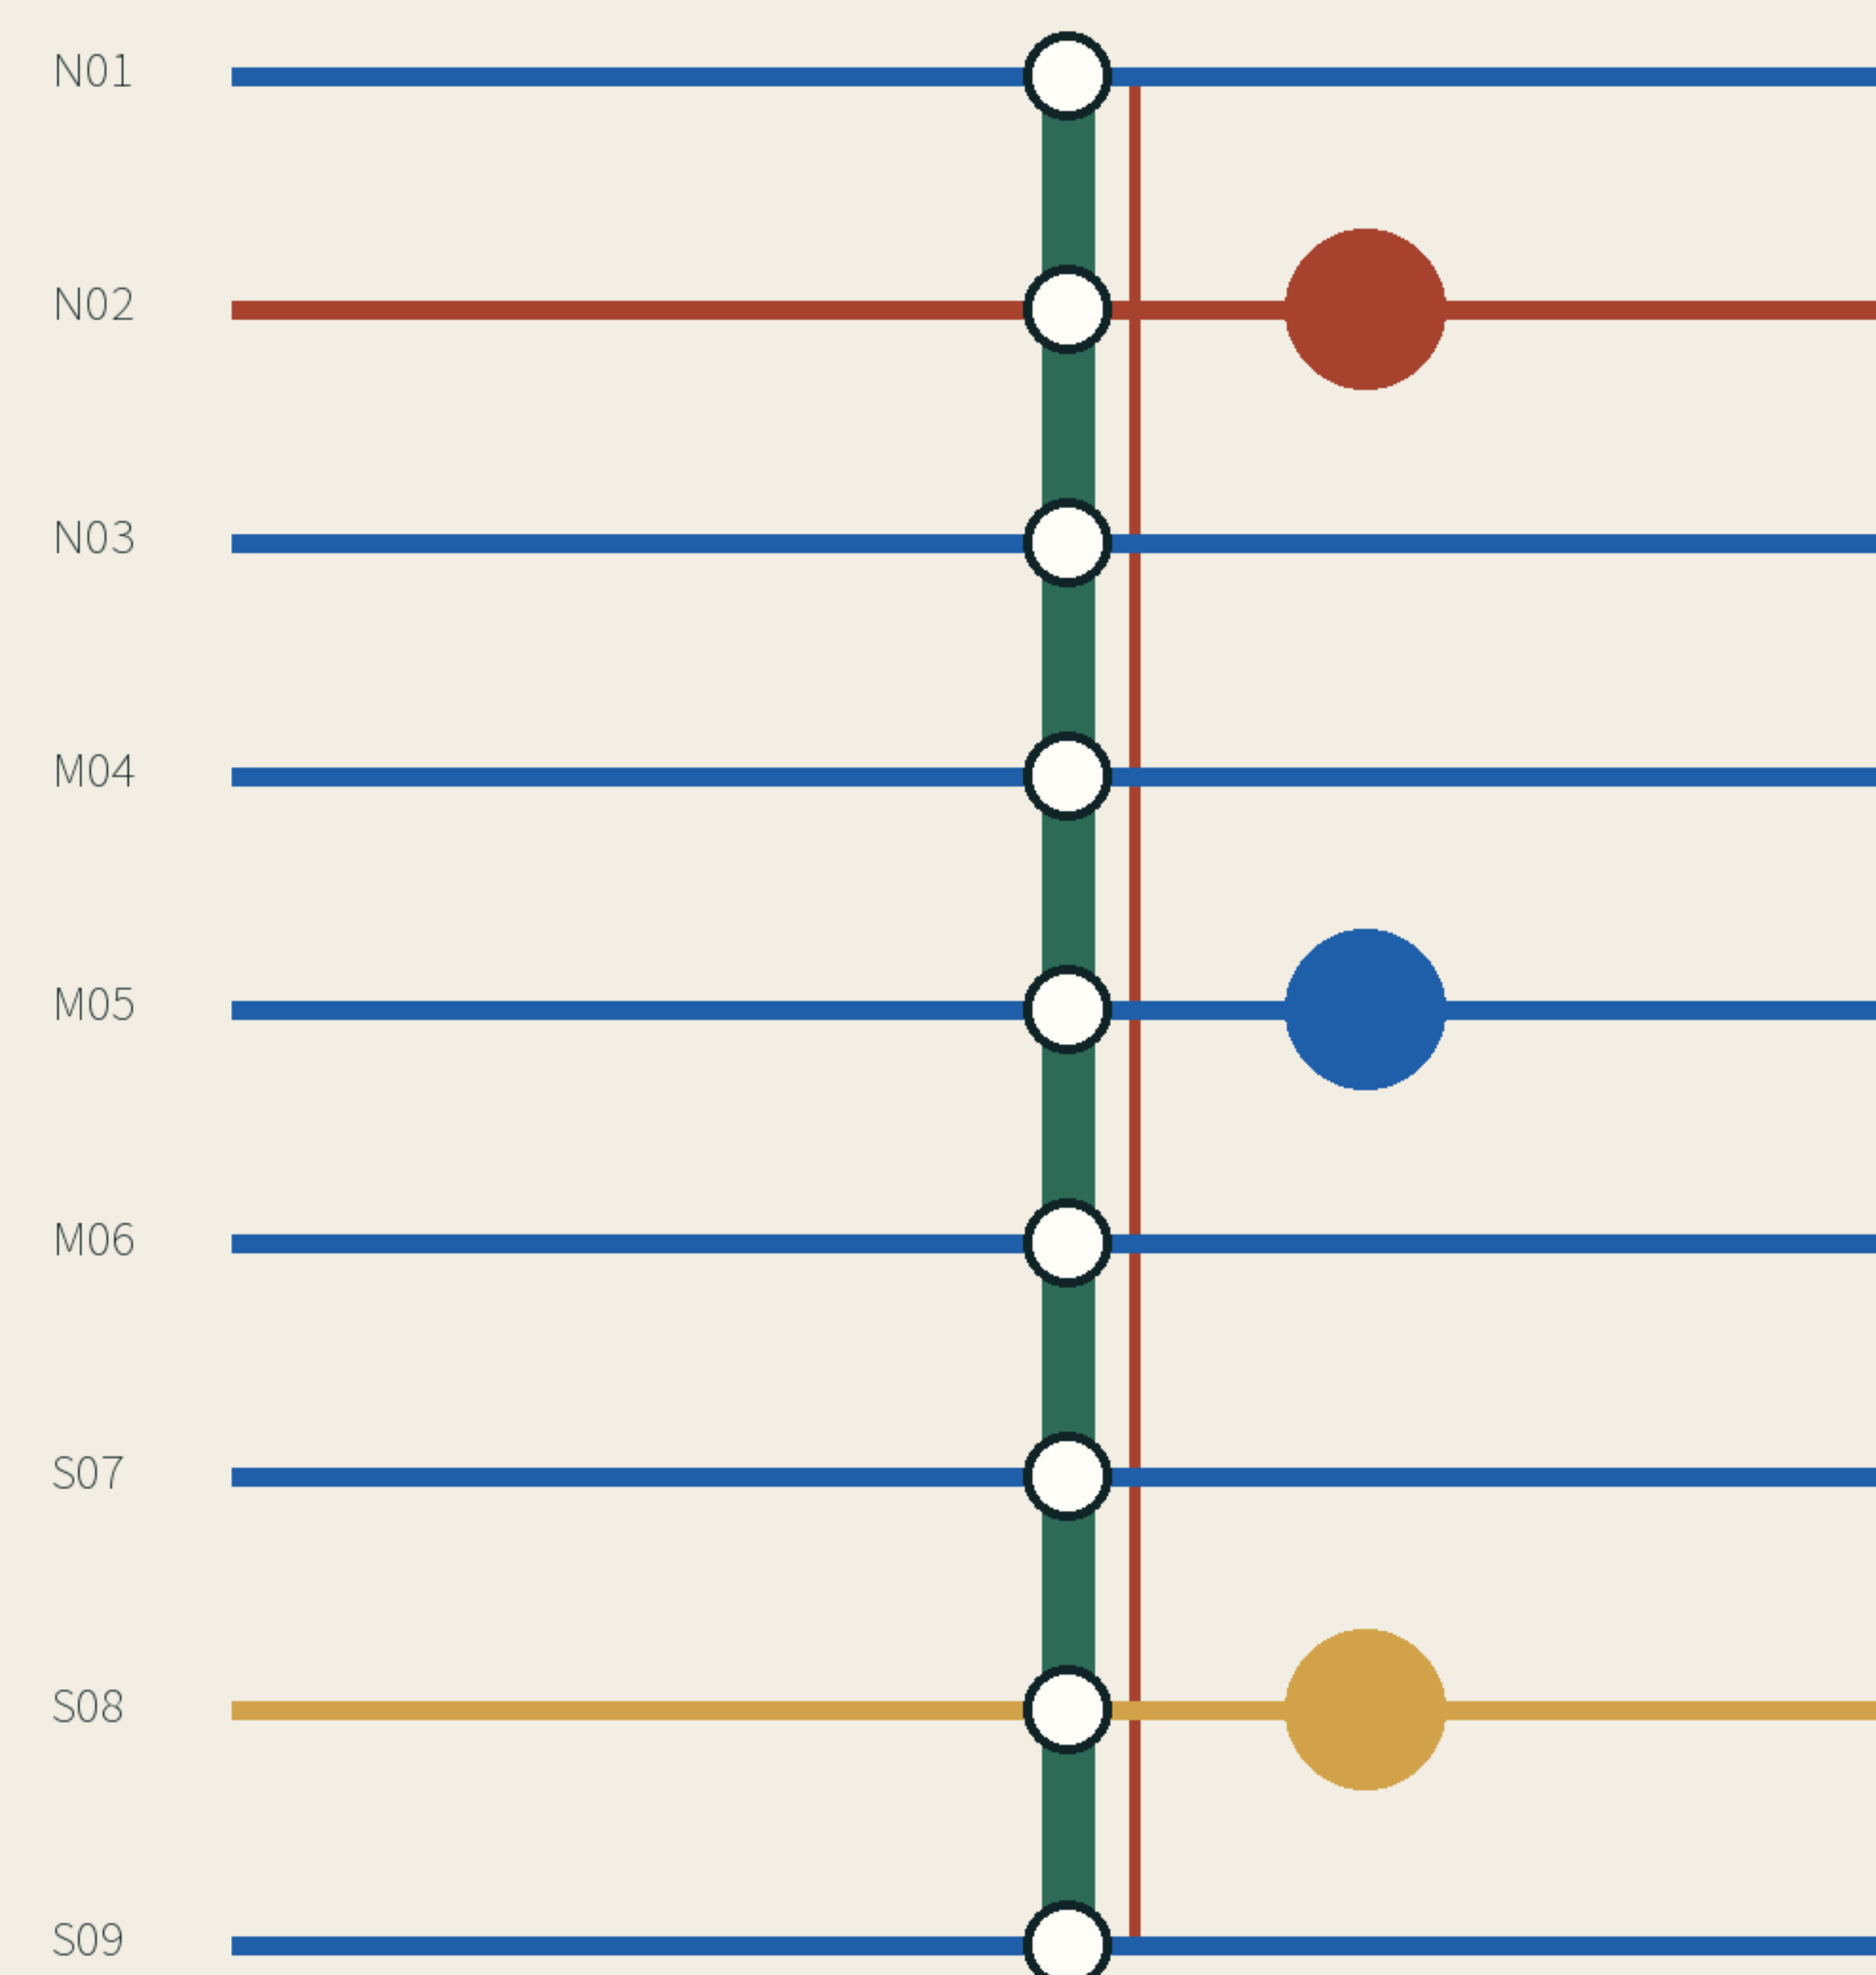

Nine-kilometre everyday public interfaces

Concept-level representation. Provisional geometry records relative sequence only; recalculate after official GIS and field verification.

OPEN PLATFORMS / 01

One line, nine public openings

The park is built. The design subject is the everyday public interface between park and city.

3 public learning stations - 9 candidate interfaces - 1 Open Platform Protocol

All spatial positions are relative concept indexes only: not official redlines, engineering alignments, approvals, or funding commitments.

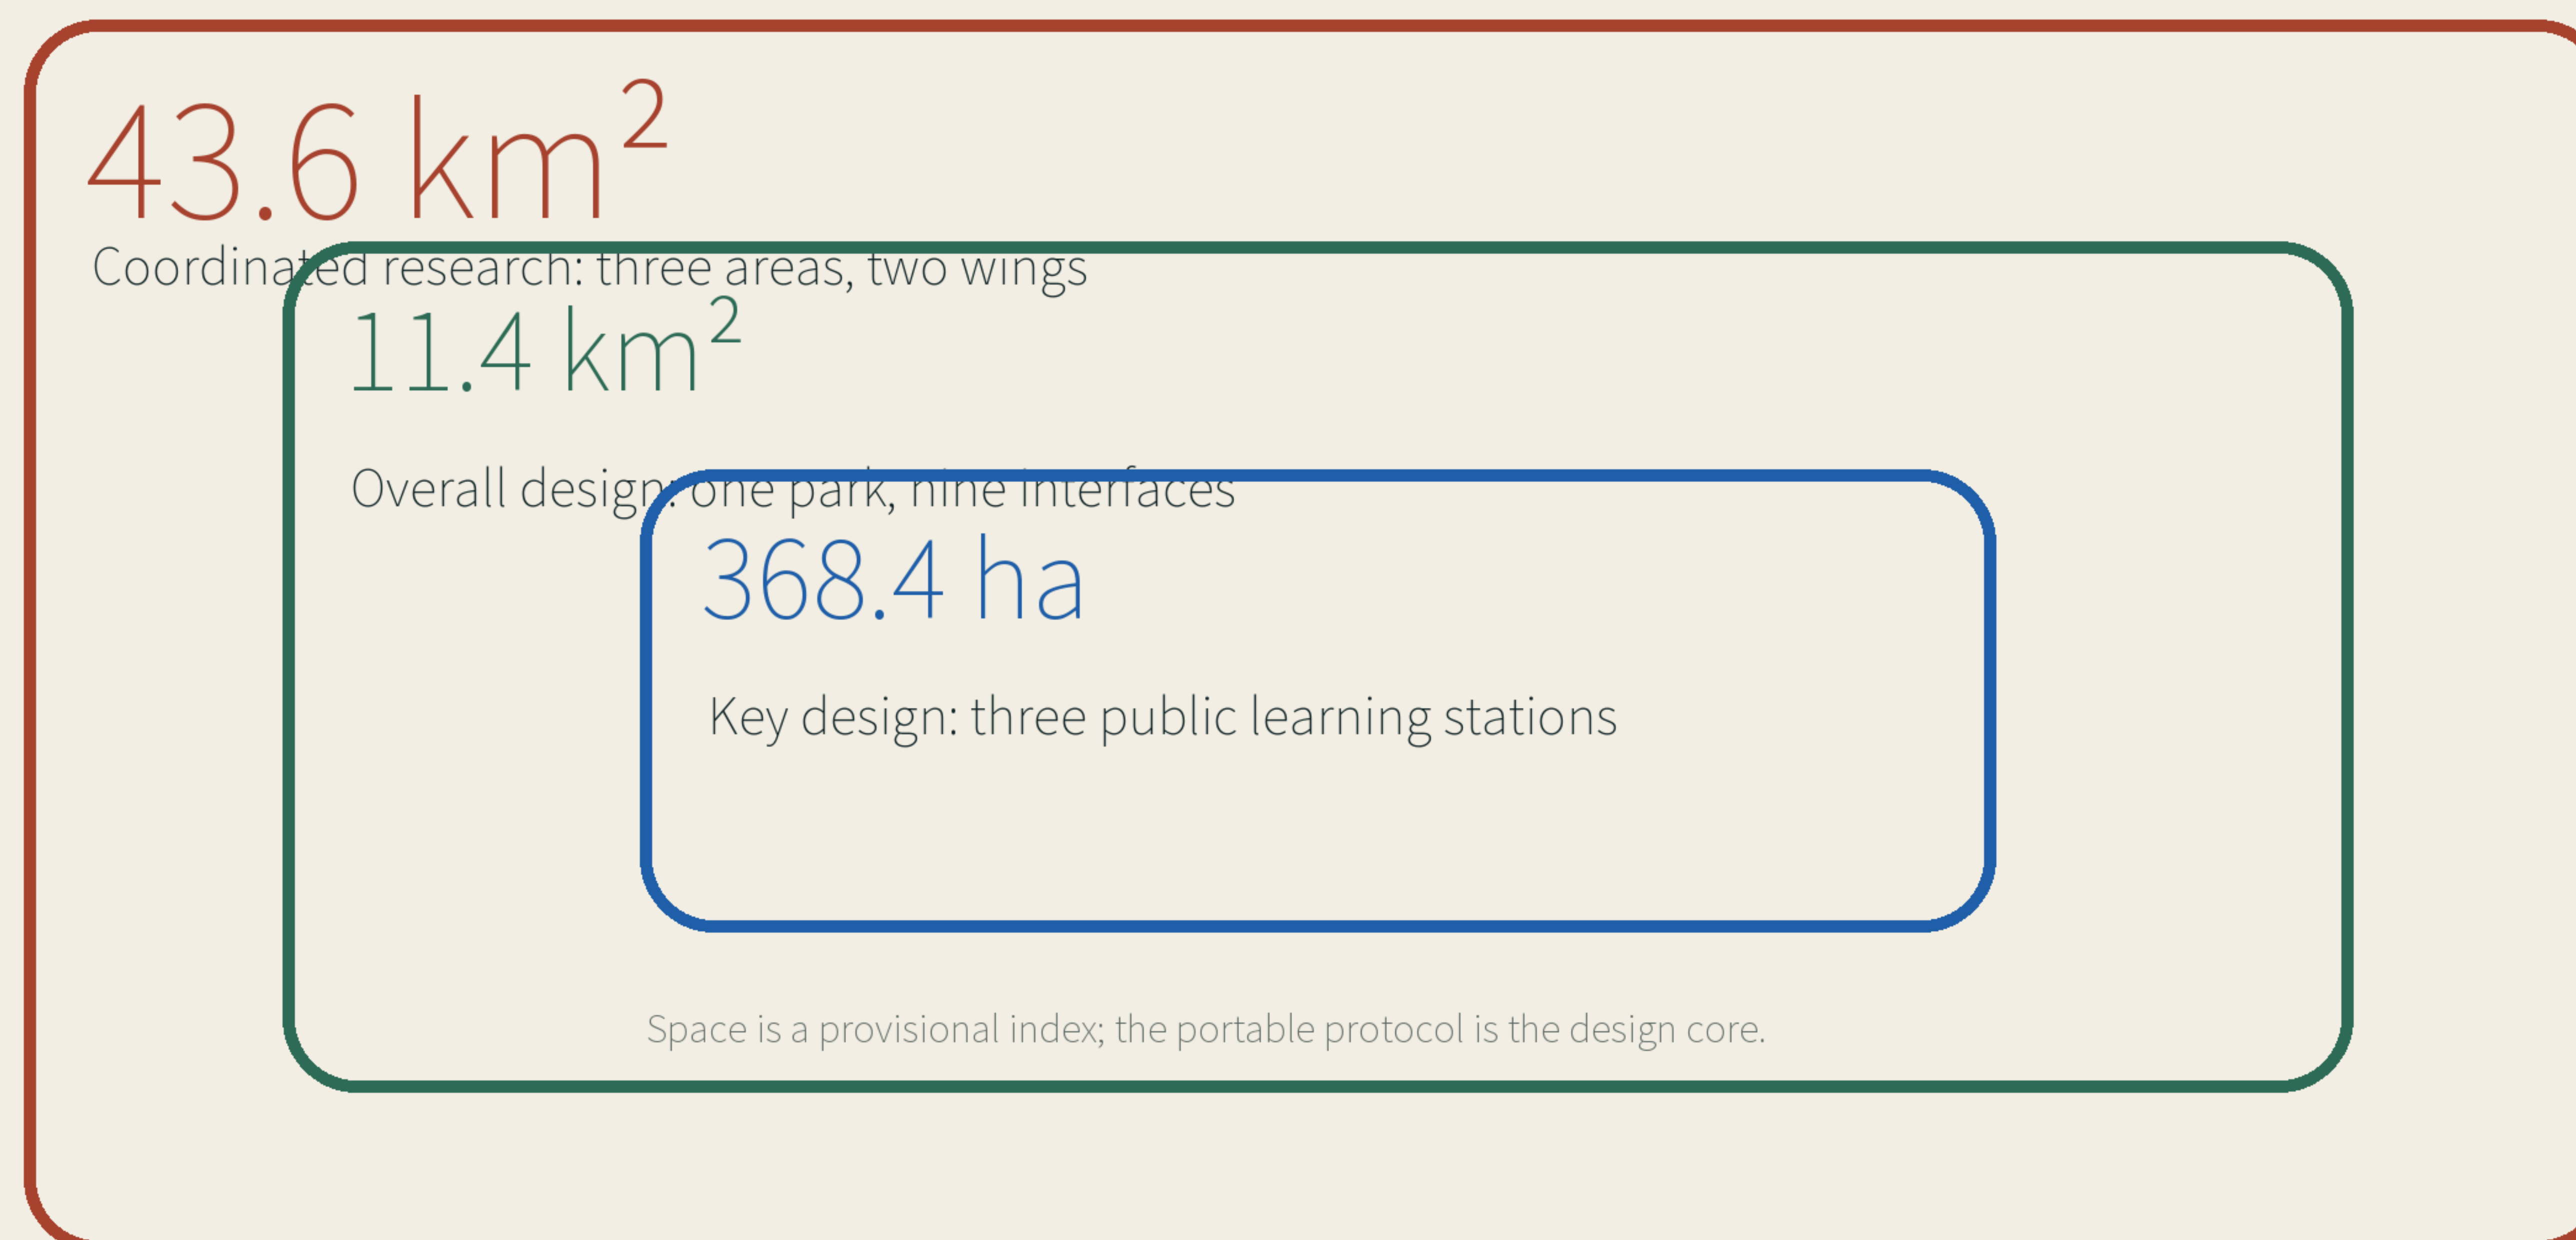

Three scopes and functional framework

Concept-level representation. Provisional geometry records relative sequence only; recalculate after official GIS and field verification.

OPEN PLATFORMS / 02

Three scopes, one operating framework

Announced areas define scope; absent official GIS, the proposal does not invent parcel precision.

All spatial positions are relative concept indexes only: not official redlines, engineering alignments, approvals, or funding commitments.

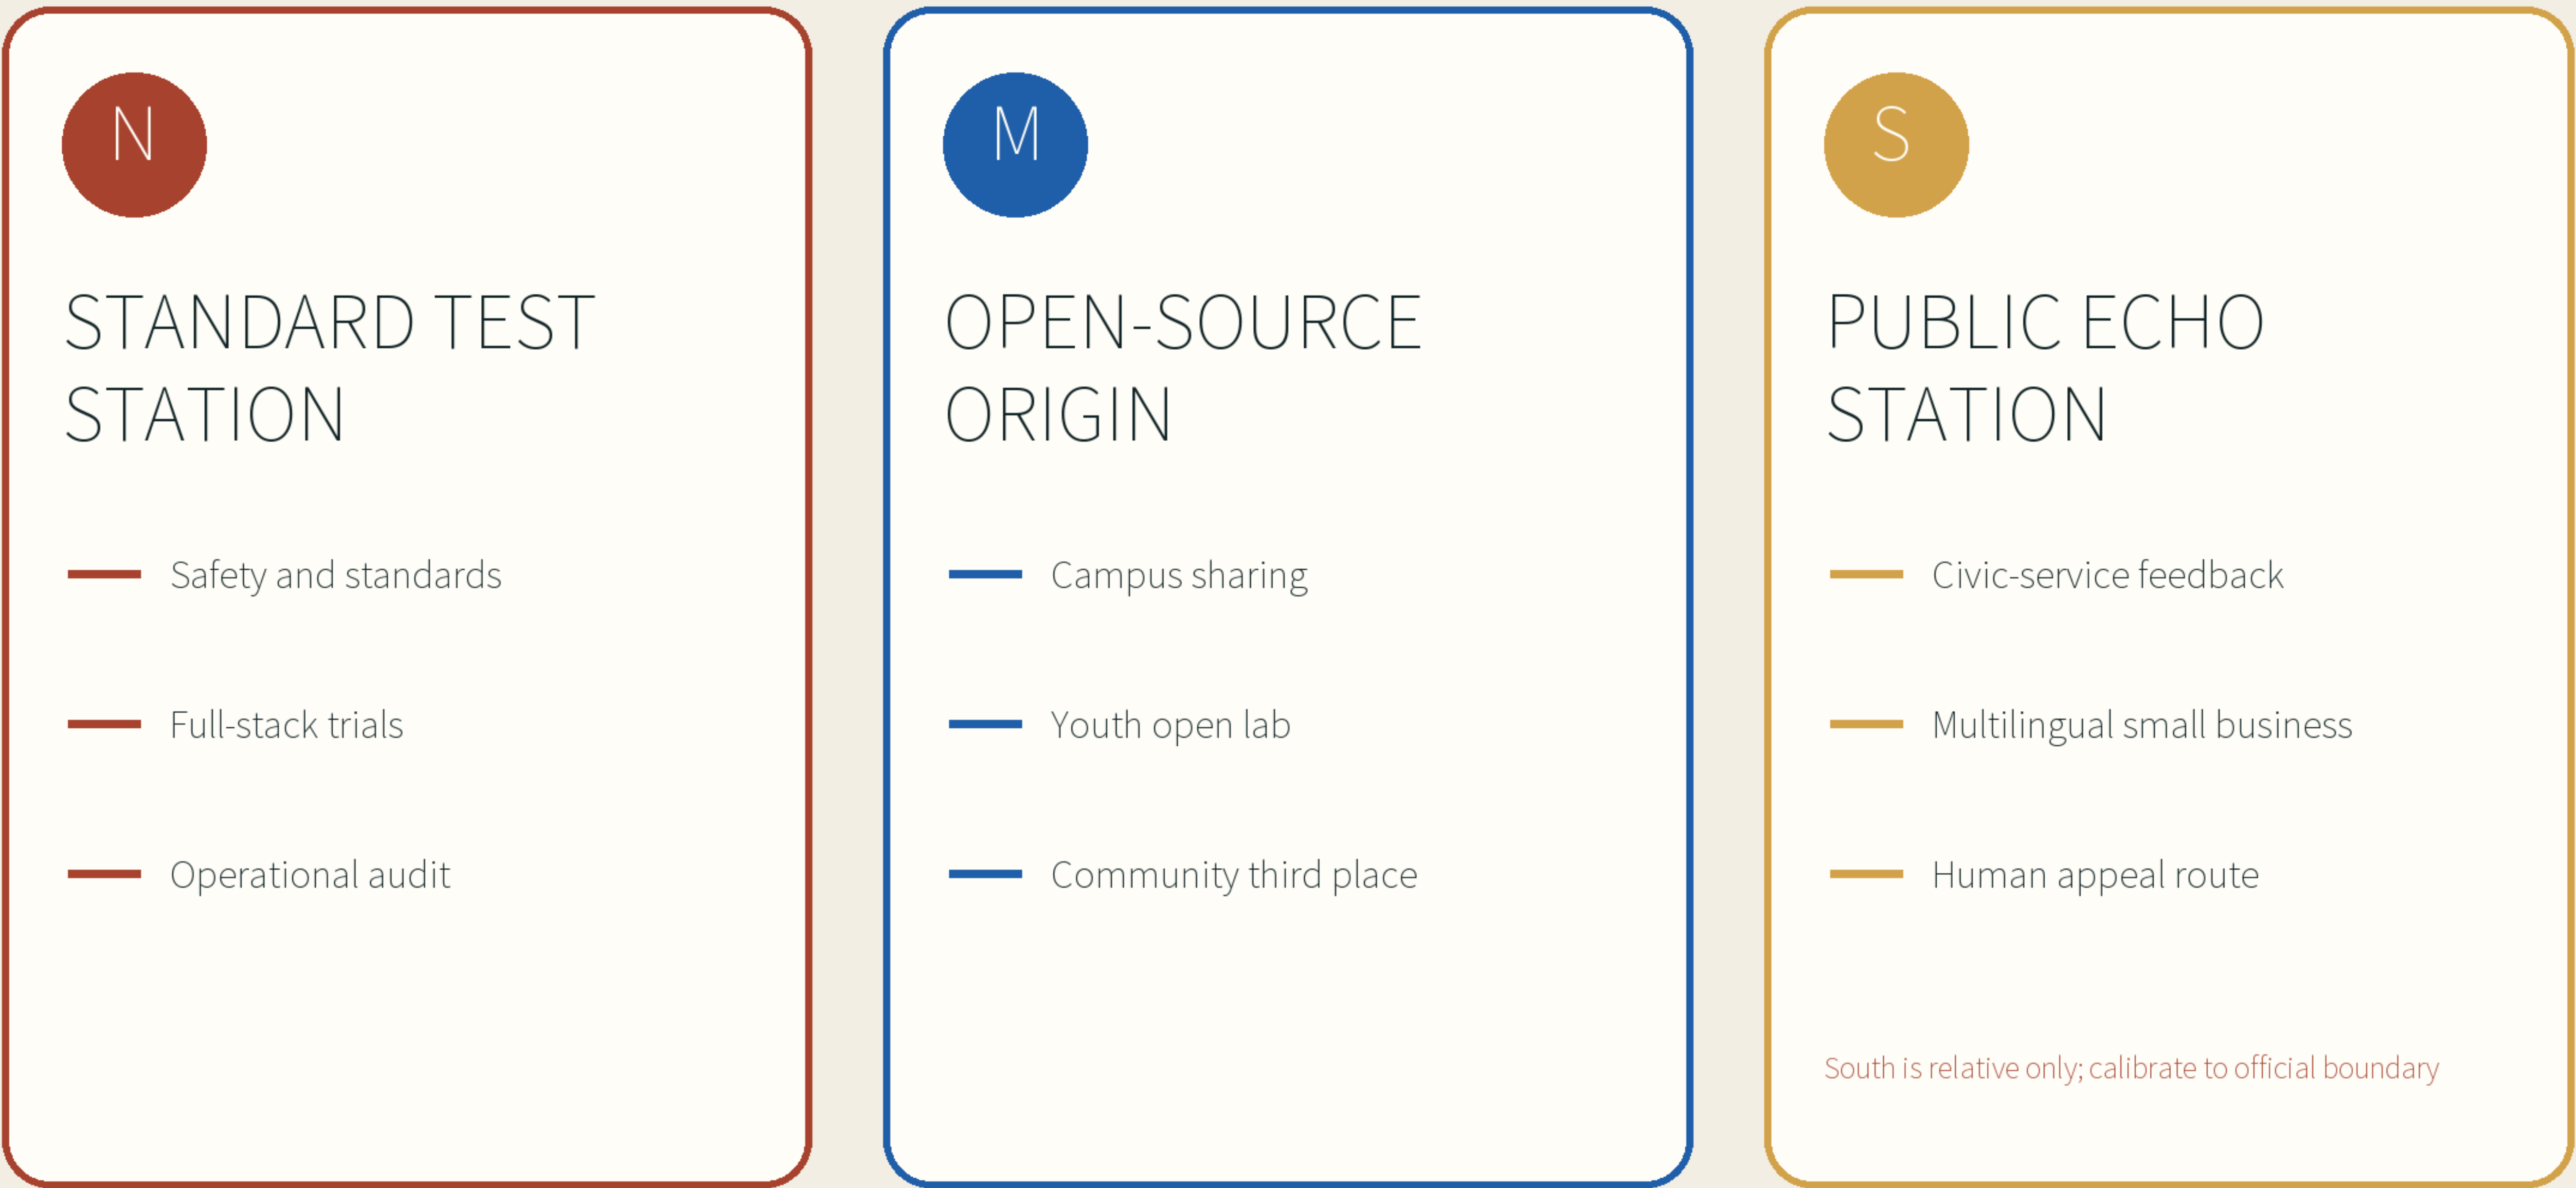

Three public learning stations

Concept-level representation. Provisional geometry records relative sequence only; recalculate after official GIS and field verification.

OPEN PLATFORMS / 03

Three public learning stations, not tech monuments

Reversible, accessible, human-staffed landmarks whose identity comes from learning and operations.

THE OPEN PLATFORM PROTOCOL

DISCOVER -> TRY -> AUDIT -> STOP -> RESTORE

Place public interest, accessibility, human fallback and the right to exit before every AI scenario. The four 4-8 week pilots start only after evidence, rights and operator verification.
