

JingZhang Agent Station (JZ-AS): multi-agent collaborative urban design proposal

One corridor, three stations, two wings, twelve transfer nodes

Provisional geometry only; not an official redline or approved plan

Three stations differentiate verification, transfer, and experience roles

All spatial suggestions are conceptual references for professional teams

Verification Station (Zhongzhiyuan): pre-deployment testing and governance
Transfer Station (AI Origin): campus-industry translation and open source
Experience Station (Dazhongsi): intelligent-native city life and international exchange
Twelve scenario cards with privacy and human-review boundaries

Machine-auditable package: GeoJSON, metrics, matrices, bilingual proposal
Organizer data gaps do not block content scoring
Official polygons trigger full chain recalculation
