

Centennial Jing-Zhang · Origin Force Belt — A3 Book

A prototype AI-native urban segment: belt, 3 cores, 5 gates, many touchpoints

Core Thesis

Upgrade a railway heritage corridor into an urban OS interface shared by people and agents.

Spatial Structure

Origin Force Belt + Beijing AI Origin Community + Dazhongsi AI Cluster + Zhongzhiyuan Accelerator + 5 transit gates.

Innovation Toolkit

Compute vouchers, scene marketplace, data trust, tiered right-of-way, ethics board, public veto.

Detailed Design of Key Areas

3 key areas and 8 narrative landmarks

Beijing AI Origin Community

Origin Dome, slow street section, popup display niches.

Dazhongsi AI Industry Cluster

Steam & Tensor Tower, Pendulum Walk, courtyard blocks.

Zhongzhiyuan AI Accelerator

Open lab facade, Agent Station, wall-free boundary.

8 Landmarks

Origin Marker, Steam & Tensor Tower, Switchback Theater, Data Market, Pendulum Walk, Agent Hub, Memory Tunnel,

Mobility, Blue-Green & Municipal

Pedestrian continuity first + low-speed right-of-way + edge compute nodes

Belt Continuity

Continuous walking/cycling without motor-vehicle interruption; crossings use under/over passes.

Tiered Road Section

Pedestrian / slow / low-speed / motor lanes; low-speed lane reserved for future autonomous devices.

Blue-Green Infrastructure

Leaf-vein green network, rain gardens, permeable paving, continuous tree canopy.

New Municipal Infrastructure

Distributed edge compute, dual-circuit power, shared utility trenches.

Metrics & Phasing

Recalculation interface + mechanism list + phasing thresholds
