

Project Overview

The proposal is named "Jingzhang Intelligence Vein · Centennial New Track". The core metaphor transforms the Jingzhang Railway's "iron track" into an "intelligence track" — an AI innovation corridor connecting past and future, engineering and intelligence, culture and life. In 1909, Zhan Tianyou led China's first independently designed mainline railway; its engineering innovation spirit finds new spatial expression in the 2026 AI era.

Core Concept

The spatial structure follows "One Track, Three Stations, Two Wings": one track is the Jingzhang Heritage Park AI Innovation Axis; three stations are Source Station (basic research), Core Station (innovation ecosystem), and Market Station (industry application), corresponding to the "source-core-outlet" segments of the innovation chain; two wings are the Zhongguancun IP Wing (capital & IP enablement) and Xiaoyuehe Scenario Wing (AI scenario testing & urban life).

Site Location

Located in Haidian District, Beijing, along the century-old Jingzhang Railway heritage corridor, from Dazhongsi in the south to Qinghe River in the north, connecting Zhongguancun, university clusters and the Xiaoyuehe area. Coordination research scope: 43.6 km²; overall design scope: 11.4 km²; key area scope: 3.68 km².

Landmarks

Spatial Structure

The land use structure follows conceptual proportions: Research 25% / Industry-Commerce 20% / Residential 18% / Green 17% / Public 10% / Transport 6% / Reserve 4%. Research land has the highest share, responding to the AI innovation system's demand for research clusters and computing hubs; green space centers on the Jingzhang Heritage Park; reserve land accommodates future AI industry uncertainties.

Land Use Structure

Transportation & Utilities

Intelligence Track Shuttle AI autonomous vehicle shuttle line along heritage park, connecting three stations
Rail Integration Strengthening TOD development at Xierqi, Zhichunlu, Dazhongsi
Slow Mobility Network Heritage park as main axis, 6-8 east-west slow mobility bridges
Parking Strategy Reduce on-street parking, build underground and multi-level facilities
Unmanned Delivery Designated robot delivery corridors around Market Station

Three-Level Scope

Coordination Research 43.6 km² Strategic Research AI industry ecology and future urban form
Overall Design Scope 11.4 km² Regulatory-level Urban Design Industry, renewal, transport, utilities
Key Area Scope 3.68 km² Comprehensive Implementation Three districts detailed design

Slow Bridges

Three key areas correspond to the "source-core-outlet" segments of the innovation chain, connected along the intelligence track axis to form a "Basic Research - Innovation Ecosystem - Industry Application" coordination circuit. Totalling 3.68 km², they host 12 AI scenario nodes and 3 AI landmark destinations.

Source Station

Multi-Wisdom Park AI Innovation Acceleration Zone

192.1 ha

Positioning

The technology source of the AI full-stack autonomous innovation system, corresponding to basic research, computing power and source innovation.

Spatial Structure

Organizing 3-4 research clusters (large models, embodied intelligence, AI for Science), placing a distributed computing hub at the center, setting up a "Researcher's Promenade" along the northern heritage park section, and reserving an autonomous vehicle shuttle test segment connecting Source and Core Stations.

AI Scenarios

AI+research assistance

computing sharing platform

open-source model incubator

AI for Science laboratory

Core Station

Beijing AI Origin Community

104.3 ha

Positioning

The heart of the world-class AI innovation ecosystem, the "living room" of the innovation belt, corresponding to open-source collaboration, achievement incubation and talent community.

Spatial Structure

Organizing a public space network centered on the "Open Source Plaza", laying out third-space networks (cafes, co-working, maker spaces), setting up an AI life experience zone (AI+healthcare, AI+education, AI+legal), and connecting east-west to the Xiaoyuehe Scenario Wing.

AI Community Council

AI+adaptive learning space

Market Station

Dazhongsi AI Industry Cluster

72.0 ha

Positioning

The AI industry commercialization outlet, corresponding to enterprise acceleration, smart commerce and international roadshows.

Spatial Structure

Organizing a smart commercial district (unmanned retail, AI guides, virtual fitting), enterprise service hub (AI accelerator, compliance center, data trading platform), industry showcase window and TOD complex (integrating commerce, office and public services).

Phasing Plan

Short-term

1-3 yrs

Focus: Core Station First
Open Source Plaza, Honor Wall, AI clinic, 2-3 slow mobility bridges
Key Projects

Mid-term

3-5 yrs

Focus: Source + Market Stations
Research clusters, computing hub, smart commercial district, AV test segment
Key Projects

Long-term

5-10 yrs

Focus: Two Wings + Full Belt
Open Source Lighthouse, IP Wing hub, Xiaoyuehe corridor, annual events mature
