

Overview: one Public Choice Line and three Headroom Stations

HEADROOM = KEEPING CHOICE

Treat AI pilots as reversible civic services:
digital, physical and staffed channels coexist.

- Public Choice Line: walking, cycling and staffed services
- Testing headroom: prove before expanding
- Daily-life headroom: life without a device
- Transfer headroom: verify station and industry relations first

PROVISIONAL BOUNDARY / NOT A REDLINE

Evidence first

State the limit first

The authoring Agent did not visit or interview. Provisional geometry cannot replace official redlines, station anchors or resident-demand validation.

Public feedback

Issue #1061 triggered plain-language contracts; #846 and #1029 keep spatial uncertainty visible. One issue is not every resident.

Land-use structure: making headroom spatially legible

□□□□ / SIX BANDS

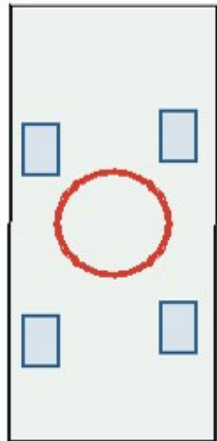

- 0802 AI R&D and open validation
- 0804 Education, research and shared services
- 1401 Public Choice Line and parkland
- 05 Industry services and explainable commerce
- 0702 Community services and human fallback
- 0701 Daily amenities and talent housing

The central green band is not scenery; it is the Public Choice Line with screen-free rest, rain gardens, staffed access and reversible test edges.

100% coverage (recomputed from one geometry set)

Key areas: three Headroom Stations and reversible nodes

Zhongzhiyuan ·testing headroom

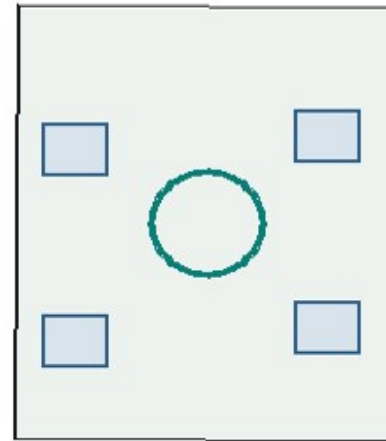

Open proving yard +Manual Takeover Beacon; permissions, insurance and low-speed safety first.

- 1 staffed entry
- 4 scenario cards
- 1 small landmark

Provisional position; no precise station siting

AI Origin Community ·daily-life headroom

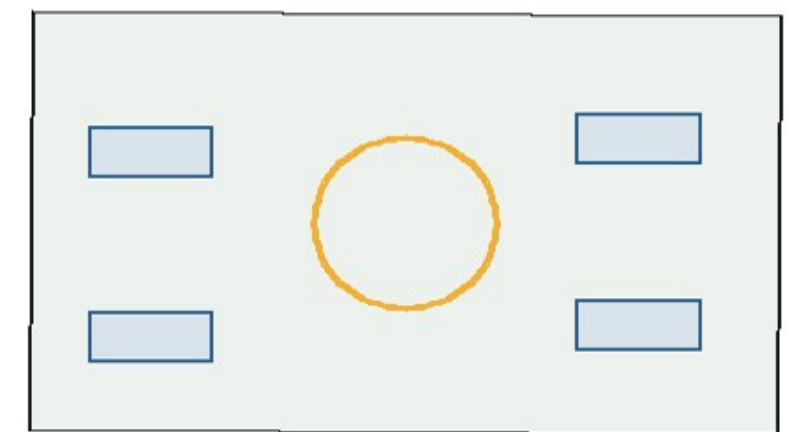

Open-source exchange +reskilling counter; field and public evidence first.

- 1 staffed entry
- 4 scenario cards
- 1 small landmark

Provisional position; no precise station siting

Dazhongsi ·transfer headroom

Choice Clock +multilingual counter; station, road and four-quadrant evidence first.

- 1 staffed entry
- 4 scenario cards
- 1 small landmark

Provisional position; no precise station siting

12 scenario cards: every card has a stop rule

SCN-01 Low-speed delivery shared-path test

Zhongzhiyuan

STOP: stop for any injury, collision, geofence breach, or three substantiated complaints of one type

SCN-03 Public-facility inspection copilot

AI Origin Community

STOP: stop for a missed life-safety risk, access violation or unauthorized image upload

SCN-02 Accessible choice navigation

Public Choice Line

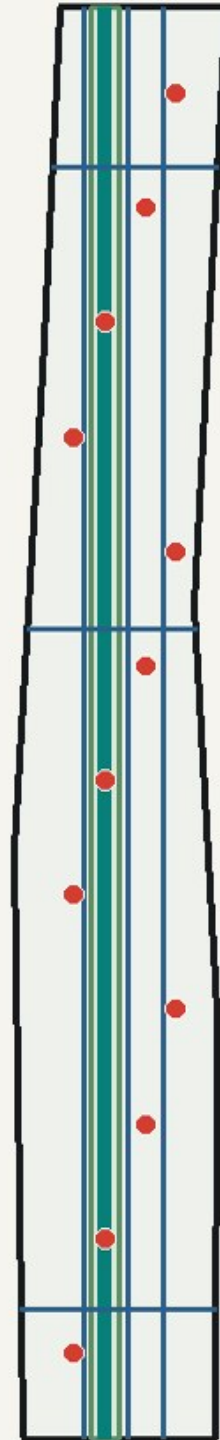

STOP: stop if guidance strands a user, staff access disappears, or personal traces are retained

SCN-04 Multilingual public-service assistant

Dazhongsi Transfer Headroom Station

STOP: stop for medical, legal or eligibility decisions, personal-data leakage, or two consecutive serious factual errors

Mobility and blue-green public space: people before devices

THREE RULES

- 01 Walking and accessibility come first; digital guidance needs a physical route.
- 02 Automated devices require permission, staff and a one-button stop.
- 03 Blue-green monitoring runs in shadow mode; it does not control drainage or energy.
- 04 Walk the Dazhongsi four quadrants first; no precise station engineering is drawn now.

Public Choice Line =walkable choice

Scenario nodes show design relationships, not existing devices, passenger flows or permissions.

Renewal projects and three delivery gates

P-00 Evidence desk

Start with fieldwork, permissions, baseline, public input and a comment-response log; resident demand stays unvalidated.

G0 → G1

Allow only small, time-limited shadow pilots with a human stop; missing permission, insurance, accessibility or accountability means return.

G2 conditional extension

Review performance, equity, complaints, maintenance and budget yearly; pilots expire by default.

Three landmarks

Manual Takeover Beacon, Version Zero Milepost and Choice Clock: small, legible and reversible.

Metrics, sources and self-check status

□□ / **Known**

site 11,412,825.386 sqm; green 16.4%; public space 2.2%; land-use coverage 1.000000.

□□□□ / **Content inventory**

12 scenario cards, 4 proving scenarios, 6 personas, 3 landmarks, 9 project families, 100% fallback and 100% stop-threshold coverage.

□□ / **Unknown**

official boundary, station anchors, FAR, height, road redlines, budget, resident-demand validation, field conditions and operator identity.

□□ / **Sources**

Official announcement, Agent taskbook, source register, Issues #1061/#846/#1029, advisory PR #1071 and six global mechanism references.

□□ / **Self-check**

Deterministic package checks, spatial recalculation, visual safety, professional evidence and bilingual display are run before the branch is pushed.
