

JING-ZHANG CIVIC FOUNDRY

A CULTURAL PRODUCTION BELT FOR CIVIC AI ADOPTION

The city is not an AI showcase.
It is a co-author.

Cultural production moves AI from "able to run" to meaningful, trusted, adoptable, and sustainable.

- ONE CORE: culture drives adoption
- ONE LOOP: seven stages
- THREE AREAS: risk gradients
- THREE PRODUCTS
- FIVE LEDGERS

01 / CATEGORY-MAKING PROPOSITION

JING-ZHANG CIVIC FOUNDRY

A CULTURAL PRODUCTION BELT FOR CIVIC AI ADOPTION

The city is not an AI showcase.
It is a co-author.

Cultural production moves AI from technical capability to civic meaning, public trust, and sustained adoption.

ONE CORE

Cultural Production Drives Civic AI Adoption

Compete on technology-to-society conversion, not model count

3

ZHONGZHIYUAN SAFE VALIDATION YARD

LOW EXPOSURE - HIGH THRESHOLD

AI ORIGIN CO-AUTHOR FOUNDRY

CALIBRATION - CO-PRODUCTION

DAZHONGSI CIVIC PREMIERE GROUND

HIGH EXPOSURE - LOW RISK

3 PRODUCTS

Content Packs | Experience Modules | Urban Services

5 LEDGERS

Public Value | Authenticity | Rights | Safety | Operations

PROVISIONAL BOUNDARY · NOT A STATUTORY PLAN

Category Gap: Beyond Another AI + City Scheme

A harder question

Peer work already addresses industry clusters, digital twins, validation governance, heritage tourism, and ecological resilience. This proposal asks how technology becomes understandable, voluntarily adopted, and operationally sustainable.

Cultural production moves AI from technical capability to civic meaning, public trust, and sustained adoption.

Common archetype	Existing strength	Civic Foundry contribution
Technology park / city model	Concentration and computing	Real civic briefs
Safety validation	Risk grading and exit	Twelve-month adoption after validation
Heritage tourism	Identity and visitors	Authenticity and content production
Vertical ecosystem	Concrete single chain	Culture as a cross-system adoption interface

ONE CORE
Cultural production drives civic AI adoption.

ONE LOOP
Seven stages from civic brief to public reinvestment.

3 PRODUCTS + 5 LEDGERS
Content, experience, service; public, culture, rights, safety, operations.

Four Clocks

04 / FOUR-TIME URBANISM

Let four time scales coexist: fast technology cannot consume the slow city

100y
Centennial

Heritage, mature trees, memory, slow materials. Minimum change, legibility, reversibility.

1d
Daily

Continuous movement, accessibility, care, quiet rest, and staffed service.

1q
Quarterly

Workshops, canopies, rigging, service interfaces, premiere components. Time-limited.

1h
Rapid

Minimal data, edge operation, test status, human takeover, and exit.

The public baseline precedes events and commerce

Access continuous bypass	Accessible field tested	Rest no purchase	Human works offline	Restore remove and review
11.0% blue-green union	0.8% scenario public-space union	9 climate gardens	2 cycle/logistics routes	

Green = blue-green and climate gardens | Orange = Civic Production Floor | White = transverse rooms | Blue = cycle and logistics routes. Road boundaries and transit interfaces await official data.

PROVISIONAL BOUNDARY • NOT A STATUTORY PLAN

The aim is not to make the slow city chase fast technology. Centennial heritage, daily life, quarterly creation, and rapid iteration each receive spatial responsibility and veto boundaries.

Civic Production Floor and Nine Urban Rooms

02 / URBAN MASTERPLAN

Not a landscape axis: Nine Transverse Urban Rooms

■ Research ■ Culture ■ Community ■ Learning ■ Adoption Services
■ Civic Floor

The sinuous Civic Production Floor widens at nine rooms. Eighteen courtyard hosts use an "existing frame, new insert, reversible layer" rule for cultural production, daily services, and controlled validation.

R01 Civic Premiere Understanding and staffed explanation	R02 Neighbourhood Content Micro-enterprise content and daily use	R03 Cultural Evidence Fact, context, correction
R04 Civic Commission Real problem and accountable owner	R05 Co-Author Long table, making, attribution	R06 Creator Life Residency, care, learning
R07 Failure Archive Public failure and review	R08 Physical AI Validation Containment, shutdown, rollback	R09 Standards Exchange Rules, versions, open source

9.5 km conceptual civic floor	9 transverse urban rooms	18 courtyard hosts	12 civic commissions
---	------------------------------------	------------------------------	--------------------------------

All geometries are clipped to a provisional rough boundary. Ratios are conceptual recalculations, not statutory RDP controls. Recompile after official boundary, building, ownership, heritage, and road data arrive.

PROVISIONAL BOUNDARY · NOT A STATUTORY PLAN

9.5 km conceptual civic floor	9 transverse urban rooms	18 courtyard hosts	12 civic commissions
---	------------------------------------	------------------------------	--------------------------------

Nine Urban Rooms: Crossing Becomes Co-Production

R01 Civic Premiere

Understanding, staffed explanation, non-digital material.

R02 Neighbourhood Content

Micro-enterprise content and daily use.

R03 Cultural Evidence

Fact, context, correction.

R04 Civic Commission

Real problems and accountable owners.

R05 Co-Author

Long table, co-making, attribution.

R06 Creator Life

Residency, learning, care.

R07 Failure Archive

Public failure and review.

R08 Physical AI Validation

Containment, shutdown, rollback.

R09 Standards Exchange

Rules, versions, open source.

Complete section of each room

Institution -> Indoor Host -> Sheltered Edge -> Civic Floor -> Climate Garden -> Community

Each stitch is a field-verification task, not an existing-road promise. Move or cancel it if rights-of-way, levels, crossings, heritage, trees, or accessibility cannot be resolved.

Renewal Grammar: Existing Frame, New Insert, Reversible Layer

Five questions for every building

- 1. Cultural and local-memory value
- 2. Existing users and social networks
- 3. Structural safety and adaptability
- 4. Whole-life carbon
- 5. Long-term operation and affordability

Public baseline

Continuous access | Field-tested accessibility | Free rest | Staffed help | Quiet bypass | Post-event restoration. Sponsorship and public wayfinding stay separate. Permanent walls cannot sever Urban Rooms.

Three Flagship Areas: Three Risk Gradients

03 / THREE RISK GRADIENTS

One adoption loop, three levels of public exposure and technical threshold

LOW EXPOSURE - HIGH THRESHOLD

Safe Validation Yard

Observation -> Green Buffer -> Test Yard -> Takeover Core

- Physical AI, public-AI red team, renewal simulation
- Public observation and equipment logistics are separated
- Failure is reviewable; boundary breach triggers shutdown

MULTI-PARTY - MEDIUM THRESHOLD

Co-Author Foundry

Brief Hall -> Long Table -> Provenance Lab -> Life Baseline

- Open briefs, cultural calibration, human-AI co-production
- Visible making and staffed services at ground level
- Resident and creator participation is not free labour

HIGH EXPOSURE - LOW RISK

Civic Premiere Ground

Transit Court -> Premiere Hall -> Culture Market -> Quiet Bypass

- Problem, status, owner, and exit are explained first
- Micro-enterprise services meet public cultural experience
- Twelve-month reuse replaces opening-day footfall

Key-area polygons are provisional rough constraints. Building forms are conceptual hosts, not a demolition decision or approved construction capacity.

PROVISIONAL BOUNDARY · NOT A STATUTORY PLAN

Safe Validation Yard

Low public exposure / high technical threshold

Co-Author Foundry

Cultural calibration and co-production / medium threshold

Civic Premiere Ground

High public exposure / low-risk premiere

Zhongzhiyuan Safe Validation Yard

LOW PUBLIC EXPOSURE - HIGH TECHNICAL THRESHOLD

Observe without exposing the public to risk

Sequence: public observation and Failure Archive -> green safety buffer -> controlled test yard -> R&D and human-takeover core.

Three mandatory validations

SC-07 renewal simulation | SC-08 public-AI red team | SC-09 graded Physical AI validation.

Stop conditions

Failed takeover, boundary breach, excessive sensitive data, disparate impact, equipment risk, or unresolved complaints.

Beijing AI Origin Co-Author Foundry

CULTURAL CALIBRATION AND CO-PRODUCTION - MEDIUM THRESHOLD

Users define problems and share authorship

Open Civic Commission Hall, Co-Author Long Table, Cultural Provenance Lab, near-campus learning, creator residency, and staffed community service form a walkable courtyard network.

Three visible ground-floor interfaces

Open making | Staffed help | A public living room without purchase.

Rights baseline

Materials, models, data, human edits, and authors are traceable. Resident and creator participation is not presumed unpaid.

Dazhongsi Civic Premiere Ground

HIGH PUBLIC EXPOSURE - LOW-RISK PREMIERE

Explain problem, status, owner, and exit before displaying technology

A transit forecourt, Civic Premiere Hall, AI-Native culture and micro-enterprise market, content workshops, Cultural Evidence Room, and quiet bypass form an ordinary urban district.

Success evidence

Twelve-month reuse, task completion, reasonable cost, staffed service, complaint repair, and effective exit - not same-day footfall.

Commercial boundary

Public information and sponsorship stay separate. Merchants gain tools and capability without surrendering data to a platform.

Twelve Civic Commissions

01 Public Understanding

staffed and non-digital explanation

02 Micro-Enterprise Content

reusable content pack

03 Cultural Evidence

fact cards and corrections

04 Accessibility Audit

field-task map

05 Community Brief

real problem and owner

06 Provenance Ledger

content and model cards

07 Renewal Simulation

controlled; no automated demolition

08 Public-AI Red Team

reviewable failure

09 Physical AI Validation

containment, shutdown, rollback

10 Multilingual Mediation

localised content pack

11 Microclimate Adaptation

no facial tracking for environment data

12 Civic Adoption

annual adoption and reinvestment ledger

Every commission identifies: commissioner | limited role of AI | co-authors | validation setting | pass evidence | stop condition.

Civic Adoption Loop, Three Products, Five Ledgers

COLLABORATION PERMITTED

Time-limited co-production | Rights-cleared distribution | Reviewed services | Training, tickets, licences

RIGHTS NOT FOR SALE

Permanent naming of heritage or roads | Personal data | Public decisions | Permanent exclusive public-space occupation

Twelve Projects and Adoption Gates

Time is a design assumption, not a government programme. Three spatial phases are released only after five reviews and twelve months of adoption evidence.

Auditable Difference: From Technical Deployment to Civic Adoption

Make Jing-Zhang not only a place where AI happens, but a place where AI learns how to enter the city.

Culture gives meaning. The city gives problems. Technology gives capability. The public gives correction. The market gives continuity. Governance gives boundaries.

All spatial precision is limited by provisional boundaries. FAR, Building Height, existing DRR decisions, road boundaries, heritage controls, and municipal capacity await official and professional evidence.

Auditable submission package

Five adoption dimensions

Problem relevance | Cultural and rights integrity | Public access and trust | Operational and market continuity | Transferability.
