

Jing-Zhang AI Pilgrimage and Proof Line

A public innovation production line that turns urban problems into co-created, verifiable, pausable, reproducible, and socially deliverable outcomes.

01 / JZ-AIOS URBAN PRODUCTION LINE

One Proof Line · Three State Stations · Two Supply Wings

AI pilgrimage means a public learning journey: question, co-create, verify, deliver, credit, and improve.

Contents and Evidence Boundary

07 / FROM GAPS TO A SECOND PLAN

A Passed Checklist Is the Starting Point, Not the Finish Line

Upgrade the plan until space is legible, scenarios are auditable, operations are reproducible, and failure can exit.

CURRENT GAP

V2 SPATIAL + GOVERNANCE ACTION

ACCEPTANCE TEST

Three isolated anchors; two wings absent	Three-state loop + two supply wings	One full relay cycle each year
Ten scenario descriptions	12 mapped scenario-passport nodes	Passport + fallback + non-AI route: 100%
Three symbolic public nodes	9 reversible public spaces + 6 gates	Daily · beta · quiet · offline modes
Key areas spatially under-described	135 key-area massing prototypes	Block · interface · node traceability
Metrics dominated by geometry	Space + governance + public value	Untested performance remains UNKNOWN
Operations reduced to annual reporting	Four-season protocol + Proof Week	Publish success, failure, and retirement

EVIDENCE GATES: 0-2 years offline/shadow → 3-5 years limited beta → after year 5 expand, correct, or retire

A calendar window never replaces entry, graduation, rollback, or expiry evidence.

EVIDENCE LIMIT Phasing is a concept sequence; dates, funding, partners, and approvals are not commitments.

- 01 Diagnosis + overall structure · 02 Land use + urban renewal · 03 Three key areas
- 04 Mobility + blue-green system · 05 Scenario governance · 06 Metrics + compliance · 07 Operations
- Figures are derived from the submitted GeoJSON and metrics.json. OSM is context only and is not a statutory source.

Overall Design Structure

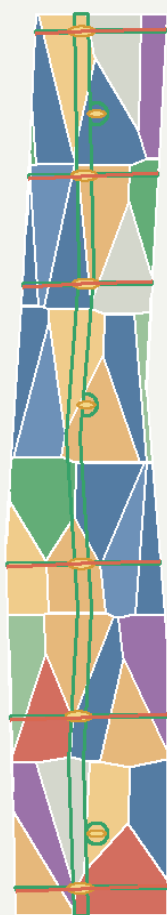

- One proof line, three state stations, and two supply wings form one accountable operating loop.
- Provisional boundary stays quiet; the six gates and twelve scenario nodes remain visually explicit.

Land Use and Urban Renewal

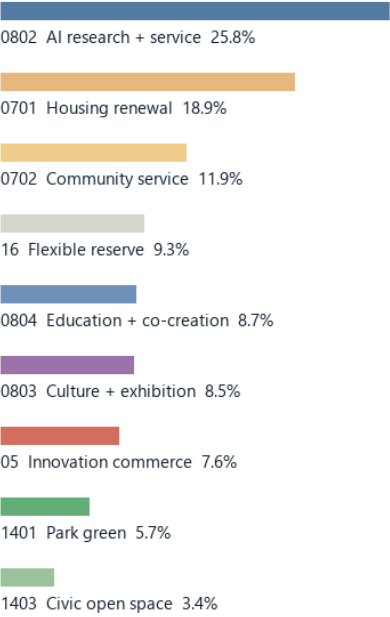

02 / LAND USE + SPATIAL TRANSMISSION

36 Spatial Units · 9 Use Envelopes · 6 Cross-corridor Gates

Land-use envelopes and direct public-space intervention footprints are measured separately.

Concept land-use mix

36 units · 9 categories
9 public-space nodes are separate
Statutory controls: UNKNOWN

EVIDENCE LIMIT Use codes are concept envelopes, not approved zoning or development controls.

- Thirty-six concept spatial units provide complete coverage across nine use envelopes.
- Land-use envelopes and direct public-space intervention footprints are measured separately.

Three Key Areas

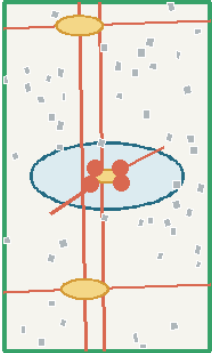

03 / THREE ANCHORS AS STATE STATIONS

Three Key Areas · Block, Massing, Public Interface, Scenario

Blue: AI service zone · Grey: massing prototype · Red: scenario-passport node · Gold: reversible public space.

01 Zhongzhiyuan

VERIFY

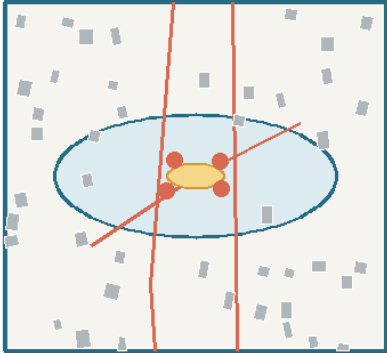

- Full-stack benchmark
- Safety + governance review
- Failure archive

Massing 50 · Passport nodes 4

Entry: discipline + community + accountable owner

02 AI Origin Community

CO-CREATE

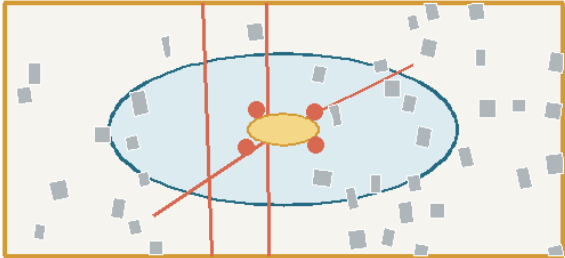

- Open-source matching
- Public deliberation
- Education co-testing

Massing 44 · Passport nodes 4

Entry: discipline + community + accountable owner

03 Dazhongsi

PUBLISH + SERVE

- Urban services
- Outcome transfer
- Bell + rail salon

Massing 41 · Passport nodes 4

Entry: discipline + community + accountable owner

TOTAL: 3 service zones · 135 key-area prototypes · 12 mapped scenario nodes

EVIDENCE LIMIT All three key-area polygons are provisional substitutes; no parcel, ownership, FAR, or height claim is made.

- Blocks, massing prototypes, public interfaces, service zones, and scenario passports are shown together.
- The three key-area polygons remain provisional and require official boundaries plus discipline-specific development.

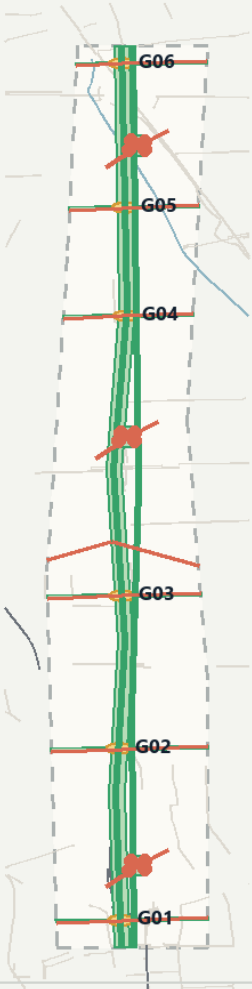

PROVISIONAL KEY-AREA BOUNDARIES · NO OWNERSHIP, DEMOLITION, OR DEVELOPMENT-QUANTUM CLAIM

Mobility, Walking, and Blue-Green Space

04 / SIX VERIFIABLE URBAN INTERFACES

Mobility + Blue-Green Network + Reversible Public Space

Each gate combines a cross-corridor stitch, non-AI access, quiet hours, manual fallback, and a stop condition.

Six accountable gates

- G1 Dazhongsi Communication Gate**
Reversible · non-AI route · pause right
- G2 Urban Service Gate**
Reversible · non-AI route · pause right
- G3 Xiaoyue River Experience Gate**
Reversible · non-AI route · pause right
- G4 University Co-creation Gate**
Reversible · non-AI route · pause right
- G5 Zhongzhi Proof Gate**
Reversible · non-AI route · pause right
- G6 Qinghe Ecological Calibration Gate**
Reversible · non-AI route · pause right

10 green spaces · 9 public nodes
12 design routes · 12 scenario nodes
Non-AI access: 100%

EVIDENCE LIMIT Road, river, rail, accessibility, and utility crossings require specialist feasibility review.

- Six gates combine accessibility, quiet periods, non-AI routes, manual fallback, and stop conditions.
- Road, water, rail, utility, and accessibility crossings require specialist feasibility review.

AI Scenarios and Governance

06 / JZ-AIOS

A Verifiable Scenario Operating System · Four Gates

An urban problem must pass an auditable state machine; it cannot jump from a demo to public operation.

Mandatory fields in every scenario passport

Version · accountable role · risk tier	Minimum data · place and time boundary	Public-value gate · harmed-group check
Human takeover · appeal · non-AI option	Pass threshold · stop threshold · retest pack	Expiry review · active retirement · failure log

Graduation cube

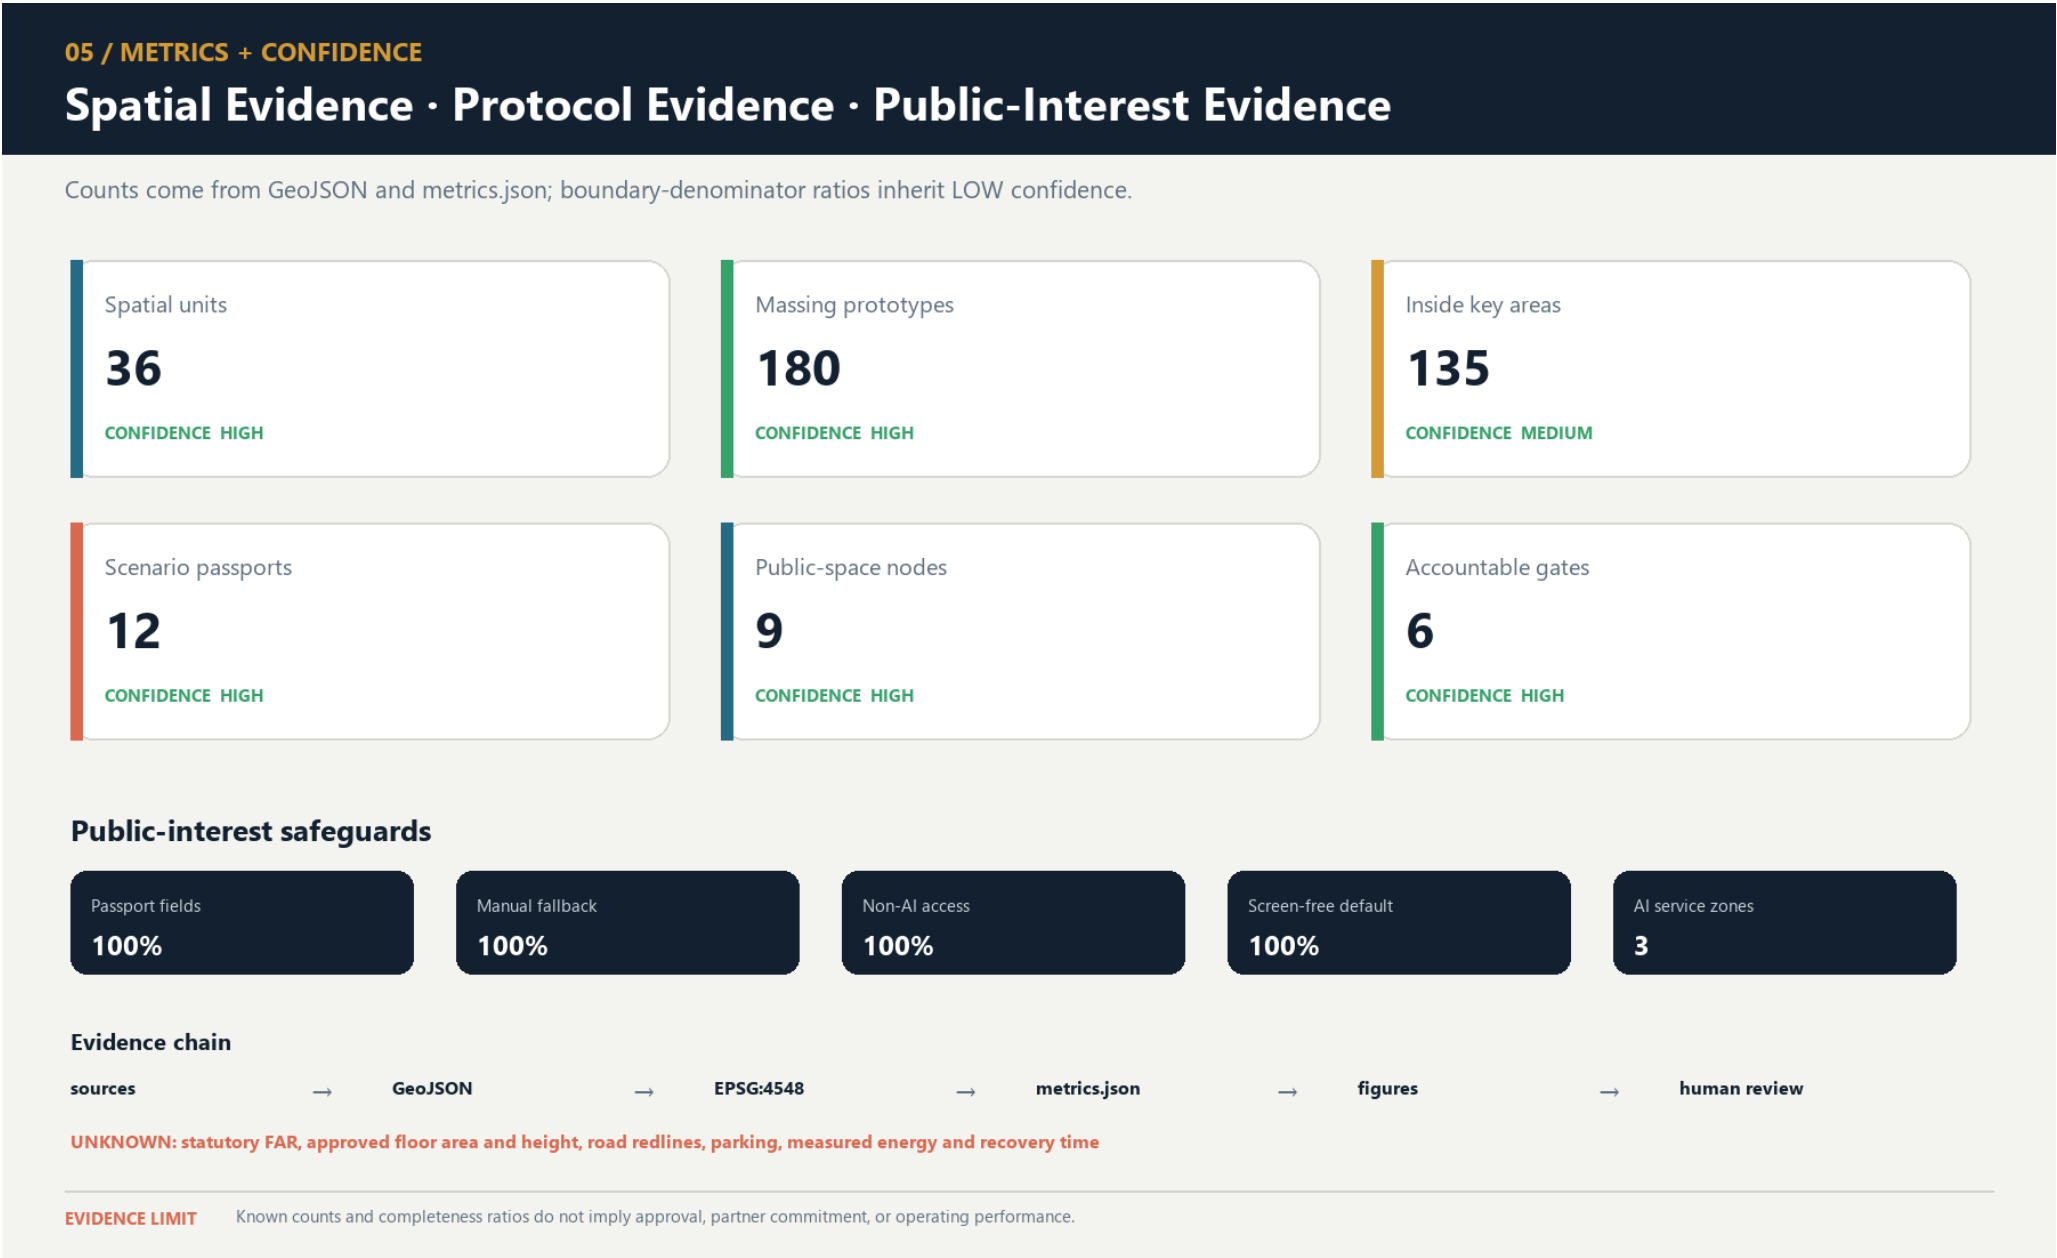

technical maturity × public-value maturity × governance maturity

12 passport nodes · 3 service zones · passport completeness 100% · manual fallback 100%

EVIDENCE LIMIT Any failed dimension pauses, corrects, or retires the scenario; G3 still requires competent approval.

- Four gates move a scenario from offline to shadow, limited beta, and public operation.
- The graduation cube tests technical, public-value, and governance maturity together.

Metric Review and Compliance

Implementation and Operations

07 / FROM GAPS TO A SECOND PLAN		
A Passed Checklist Is the Starting Point, Not the Finish Line		
Upgrade the plan until space is legible, scenarios are auditable, operations are reproducible, and failure can exit.		
CURRENT GAP	V2 SPATIAL + GOVERNANCE ACTION	ACCEPTANCE TEST
Three isolated anchors; two wings absent	Three-state loop + two supply wings	One full relay cycle each year
Ten scenario descriptions	12 mapped scenario-passport nodes	Passport + fallback + non-AI route: 100%
Three symbolic public nodes	9 reversible public spaces + 6 gates	Daily · beta · quiet · offline modes
Key areas spatially under-described	135 key-area massing prototypes	Block · interface · node traceability
Metrics dominated by geometry	Space + governance + public value	Untested performance remains UNKNOWN
Operations reduced to annual reporting	Four-season protocol + Proof Week	Publish success, failure, and retirement
EVIDENCE GATES: 0-2 years offline/shadow → 3-5 years limited beta → after year 5 expand, correct, or retire		
A calendar window never replaces entry, graduation, rollback, or expiry evidence.		
EVIDENCE LIMIT	Phasing is a concept sequence; dates, funding, partners, and approvals are not commitments.	

- Each identified gap becomes a V2 spatial or governance action with an acceptance test.
- Calendar phases never replace entry, graduation, rollback, and expiry evidence.

Risk, Rights, and Missing Evidence
