

JINGZHANG: THE SILICON-CARBON CITY — the first urban belt where humans and agents coexist

compute as general equivalent · three linear spaces (conceptual) · dual-perspective scenes · OPC live-work · time folding · compute equity

Silicon-Carbon City — Overall design area & three linear spaces

Source: provisional boundary from announcement text; three linear spaces are conceptual; shown in EPSG:4326

- ⌘ Zhongzhiyuan: computing lighthouse (★ = tower public anchor)
- ⚠ PROVISIONAL • not an official redline • recalculate when official data arrives
- ⚡ Origin: OPC live-work community
- ⌘ Dazhongs: native-intelligent consumption street
- Jing-Zhang tech axis (conceptual) | Cables: talent, energy, market, cloud | Expansion ring = ride-shed suggestion

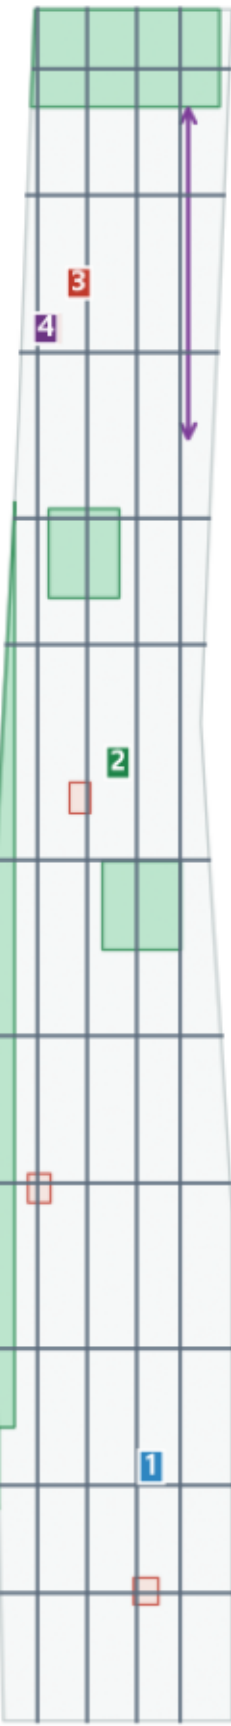

Three key areas — dual-perspective scenario battlefield

Source: provisional key-area polygons, each with positioning and dual-perspective scene points

⌘ Zhongzhiyuan tower = dual foundation anchor (tower / 500m low latency zone / tower park symbols; dual view body in tower interface at place, right tower also  
⚠ PROVISIONAL • not an official redline • recalculate when official data arrives  
⚡ Origin: OPC live-work community  
⌘ Dazhongs native intelligent street four-quadrant connectivity / intensive belt / data element circulation (conceptual); dual view companionship in cloud memory agent body  
⌘ Exchange boxes (both style) — schematic points

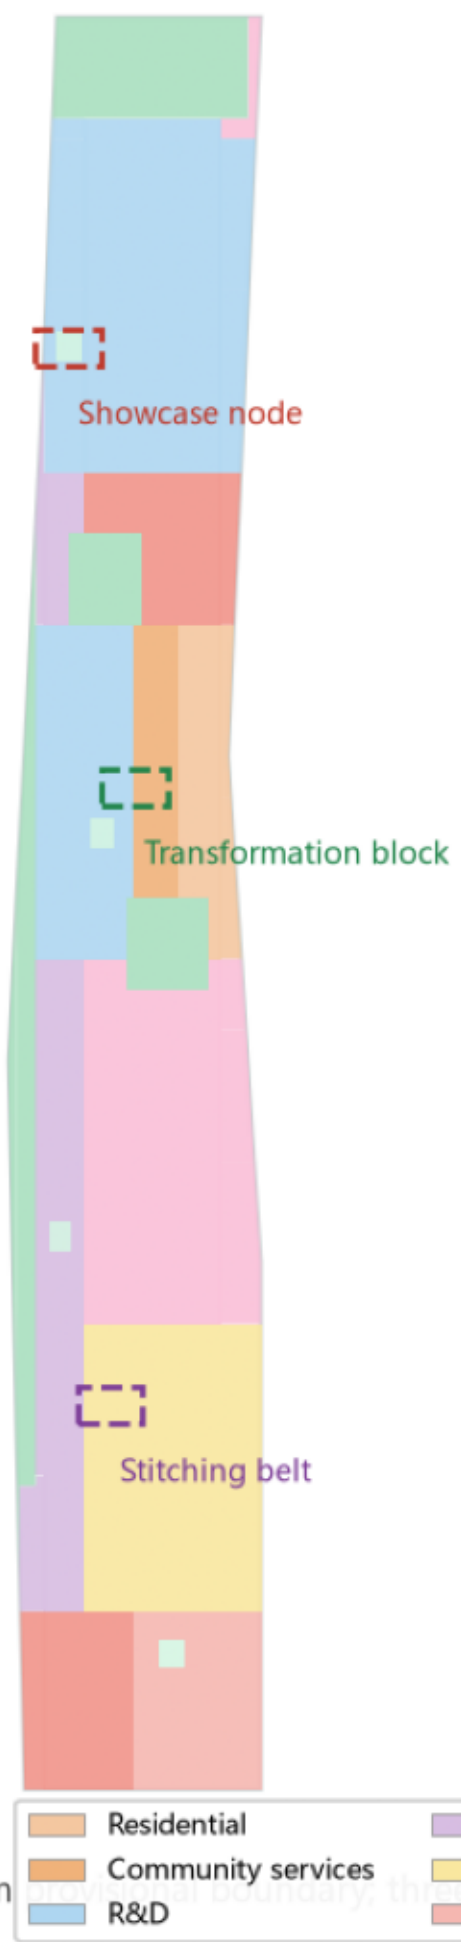

Mobility, blue-green network & tiered compute carriers

Source: conceptual design layers; L1-L4 tiered compute carriers; shown in EPSG:4326

- 1.1 Universal token points (public space)
- ⚠ PROVISIONAL • not an official redline • recalculate when official data arrives
- 4.2 Community compute cars (community outliers)
- 3.3 500m low-latency special zone (professional)
- 4.4 Tower direct connect (frontier)
- ⌘ Time-shared ROW: day pedestrian peak / night robot delivery & ops peak (time folding)
- Green = blue-green space | Red = public-space plazas | Grey = road centerlines (conceptual)

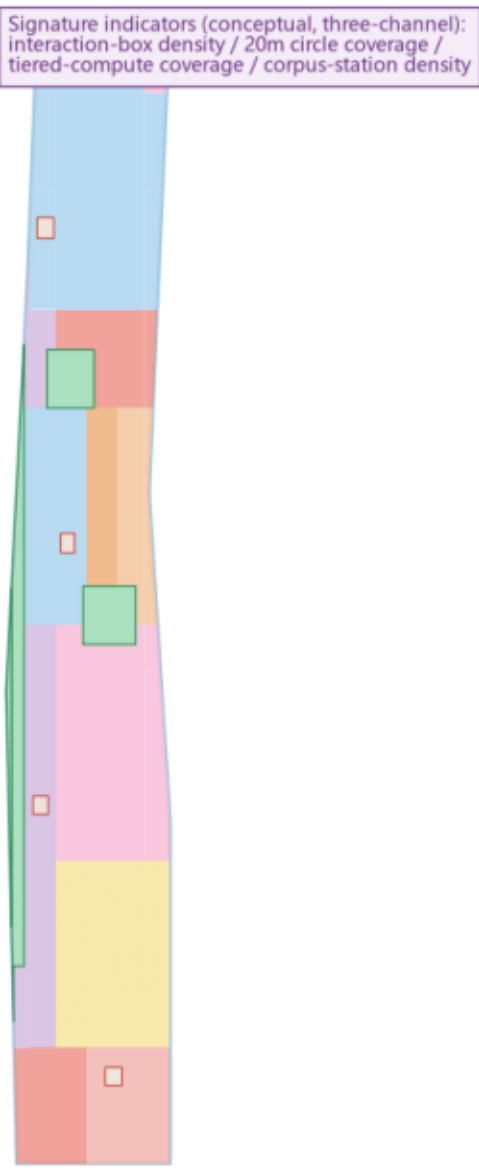

Land-use structure & three-type control framework

Source: conceptual land-use partition from

⚠ PROVISIONAL • not an official redline • recalculate when official data arrives

Core metrics recalculation & evidence chain

Source: recomputed from submitted geometry in EPSG:4548; signature indicators follow the three-channel route

⚠ PROVISIONAL • not an official redline • recalculate when official data arrives

|                                                  |                                         |                                          |                             |                                                                |
|--------------------------------------------------|-----------------------------------------|------------------------------------------|-----------------------------|----------------------------------------------------------------|
| 11.41 km <sup>2</sup>                            | 12.8%                                   | 0.7%                                     | 3                           | 791k m <sup>2</sup>                                            |
