

Smart Rail Weaves the City

A four-line symbiosis system for the Centennial Jing-Zhang AI Innovation Belt

Heritage is not a backdrop, AI is not decoration, public space is not residual, and governance is not an appendix. All four must hold together in one reversible, auditable urban system.

01 Four lines, one weave: from heritage time to accountable operations

Jing-Zhang rail heritage is the temporal warp ; AI innovation, rail-walking-blue-green continuity, and accountable governance form the weft. Three key areas test complementary operating models.

- 01 Rail heritage time**
Verify history; keep interventions reversible and low-impact.
- 02 AI innovation & industry**
Open source → evaluation → production → adoption → review.
- 03 Rail-walking-blue-green**
Interchange, accessibility, shade, and public-space continuity.
- 04 Accountable governance**
Purpose, minimum data, Human Review, grievance, and stop rules.

3 KEY AREAS / 三处重点区

1 → 2 → 3 Open evaluation → daily co-testing → enterprise adoption feedback

02 One spine • three knots • two wings • many stitches • one ledger

One spine
Heritage-time and public-space spine

Three knots
Three complementary operating models

Two wings
Technology services + scenario enablement

Many stitches
Continuity problems across roads, stations, and campuses

One ledger
Scenario, data, owner, grievance, and stop rules

11.41 km²

Calculated from a provisional polygon; not a precise announced area

- 目的 / PURPOSE
- 责任 / OWNER
- 停机 / STOP

- 数据 / DATA
- 申诉 / GRIEVANCE

03 Three key areas: differentiated roles, reciprocal feedback

04 Rail-walking-blue-green: repair continuity before engineering

Heritage stitch

Time marker → park entrance

Innovation stitch

Collaboration → testing → release

Daily-life stitch

Community service → rail interchange

Ecological stitch

Shade → stormwater → active travel

Five gates before any pilot expansion

Purpose • Minimum data • Human takeover •
Grievance/correction • Exit disposition

If one is missing, do not enter public space

12 scenario cards: accountability before intelligence

TV-01

Reproducible open-model evaluation

Stop if licensing is unclear or results cannot be reproduced

TV-02

Edge-device and accessibility testing

Stop without device, fire, or data safeguards

TV-03

Controlled robot testing in public space

Stop without separation and on-site takeover

TV-04

Red-team testing of civic-service agents

Stop with real sensitive cases or no correction path

SC-05

AI walking and accessibility guidance

No persistent identity tracking

SC-06

Heritage time markers

Stop if history is unverified or fabric is affected

SC-07

Origin daily-life assistant

Human confirmation for consequential matters

SC-08

Offline-fallback public-service desk

Never deny service from AI output

SC-09

Enterprise need–capability matching

No implied procurement or endorsement

SC-10

Bilingual visitor navigation

Disclose uncertain translation

SC-11

Blue-green maintenance collaboration

No face or individual trajectory data

SC-12

Public scenario ledger and grievance desk

No launch without owner, grievance, and exit

05

Three evidence classes: announced approximations, provisional calculations, authored counts

ANNOUNCED APPROXIMATIONS

≈ 43.6 km²

Coordinated research area

≈ 11.4 km²

Overall design area

≈ 368.4 ha

Three key areas combined

Describe task scale only; they do not generate precise polygons.

PROVISIONAL DESIGN CALCULATIONS

11.413 km²

Provisional overall polygon

12.34%

Concept green-space ratio

7.33%

Concept public-space ratio

31.08 ha

Scaffold building footprint

All low-confidence; recalculate after official geometry and professional base data arrive.

AUTHORED OUTPUT COUNTS

6

design personas

12

scenario cards

4

industrial test scenarios

4

concept landmarks

13 documented assumption groups
They are stop conditions, not deferred fine print.

Gate-based implementation: every phase can stop

OVERALL STOP CONDITIONS

Boundary conflict · unclear provenance or rights · missing professional review · no legality/necessity assessment for personal or sensitive data · no owner/Human Review/grievance/exit · AI-only basic service · unacceptable risk to safety or rights
