

ONE LINE • THREE TRANSLATIONS • SIX WORDS

GROUND LANGUAGE

PUBLIC-SPACE RULES
PEOPLE CAN UNDERSTAND
AND MACHINES MUST OBEY

Chozzc × OpenAI Codex (GPT-5)

CONCEPT ATMOSPHERE - NOT SITE OR ENGINEERING EVIDENCE

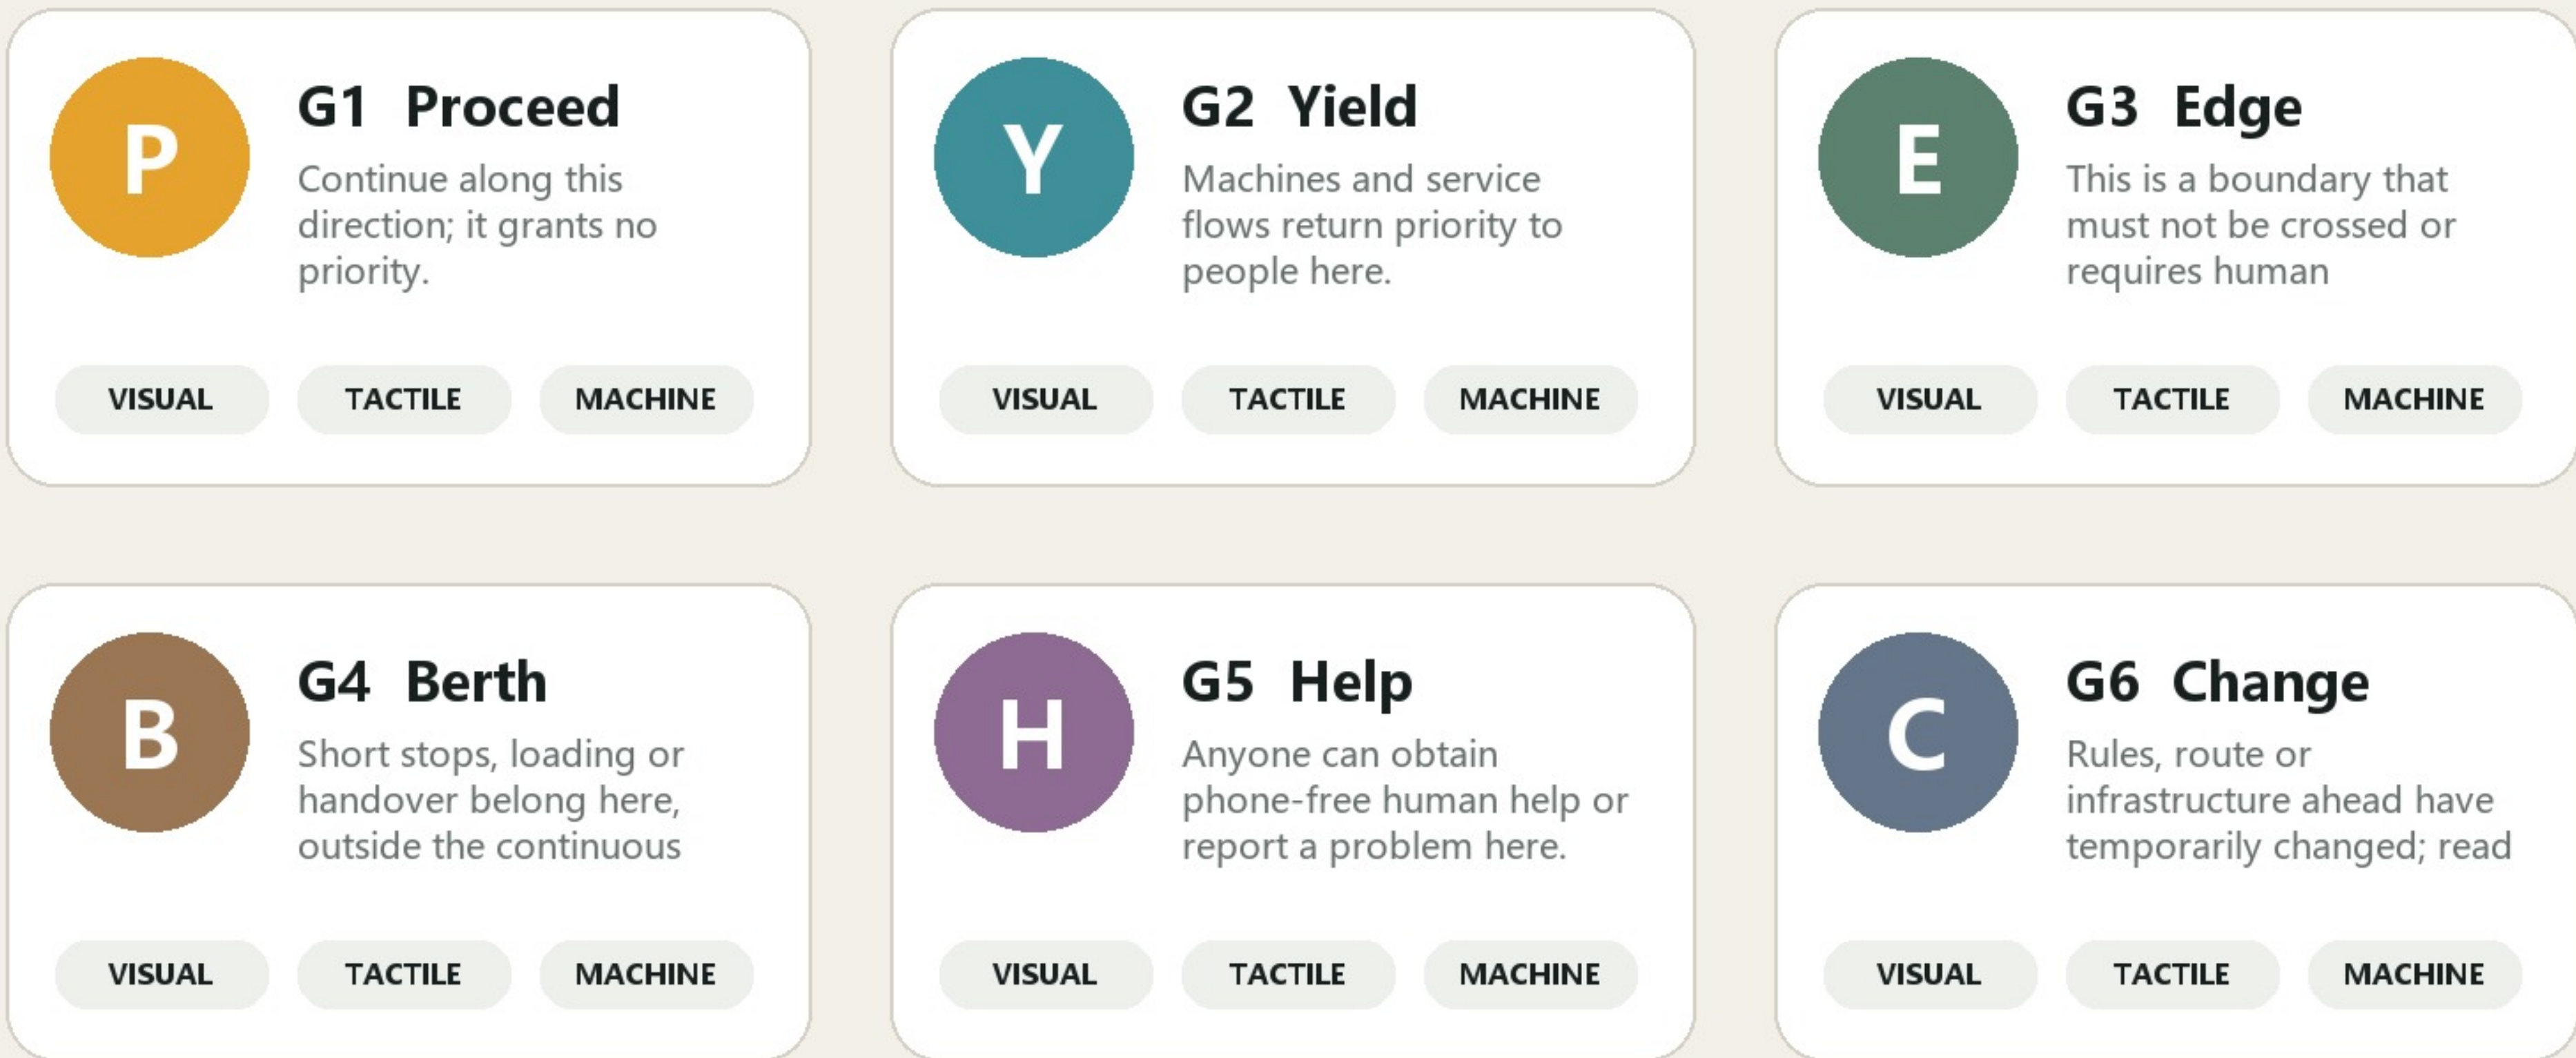

SIX-WORD GRAMMAR AND VALIDATION CHAIN

An open validation chain from co-reading to real operations

01 / OPEN GRAMMAR

SIX WORDS, THREE TRANSLATIONS

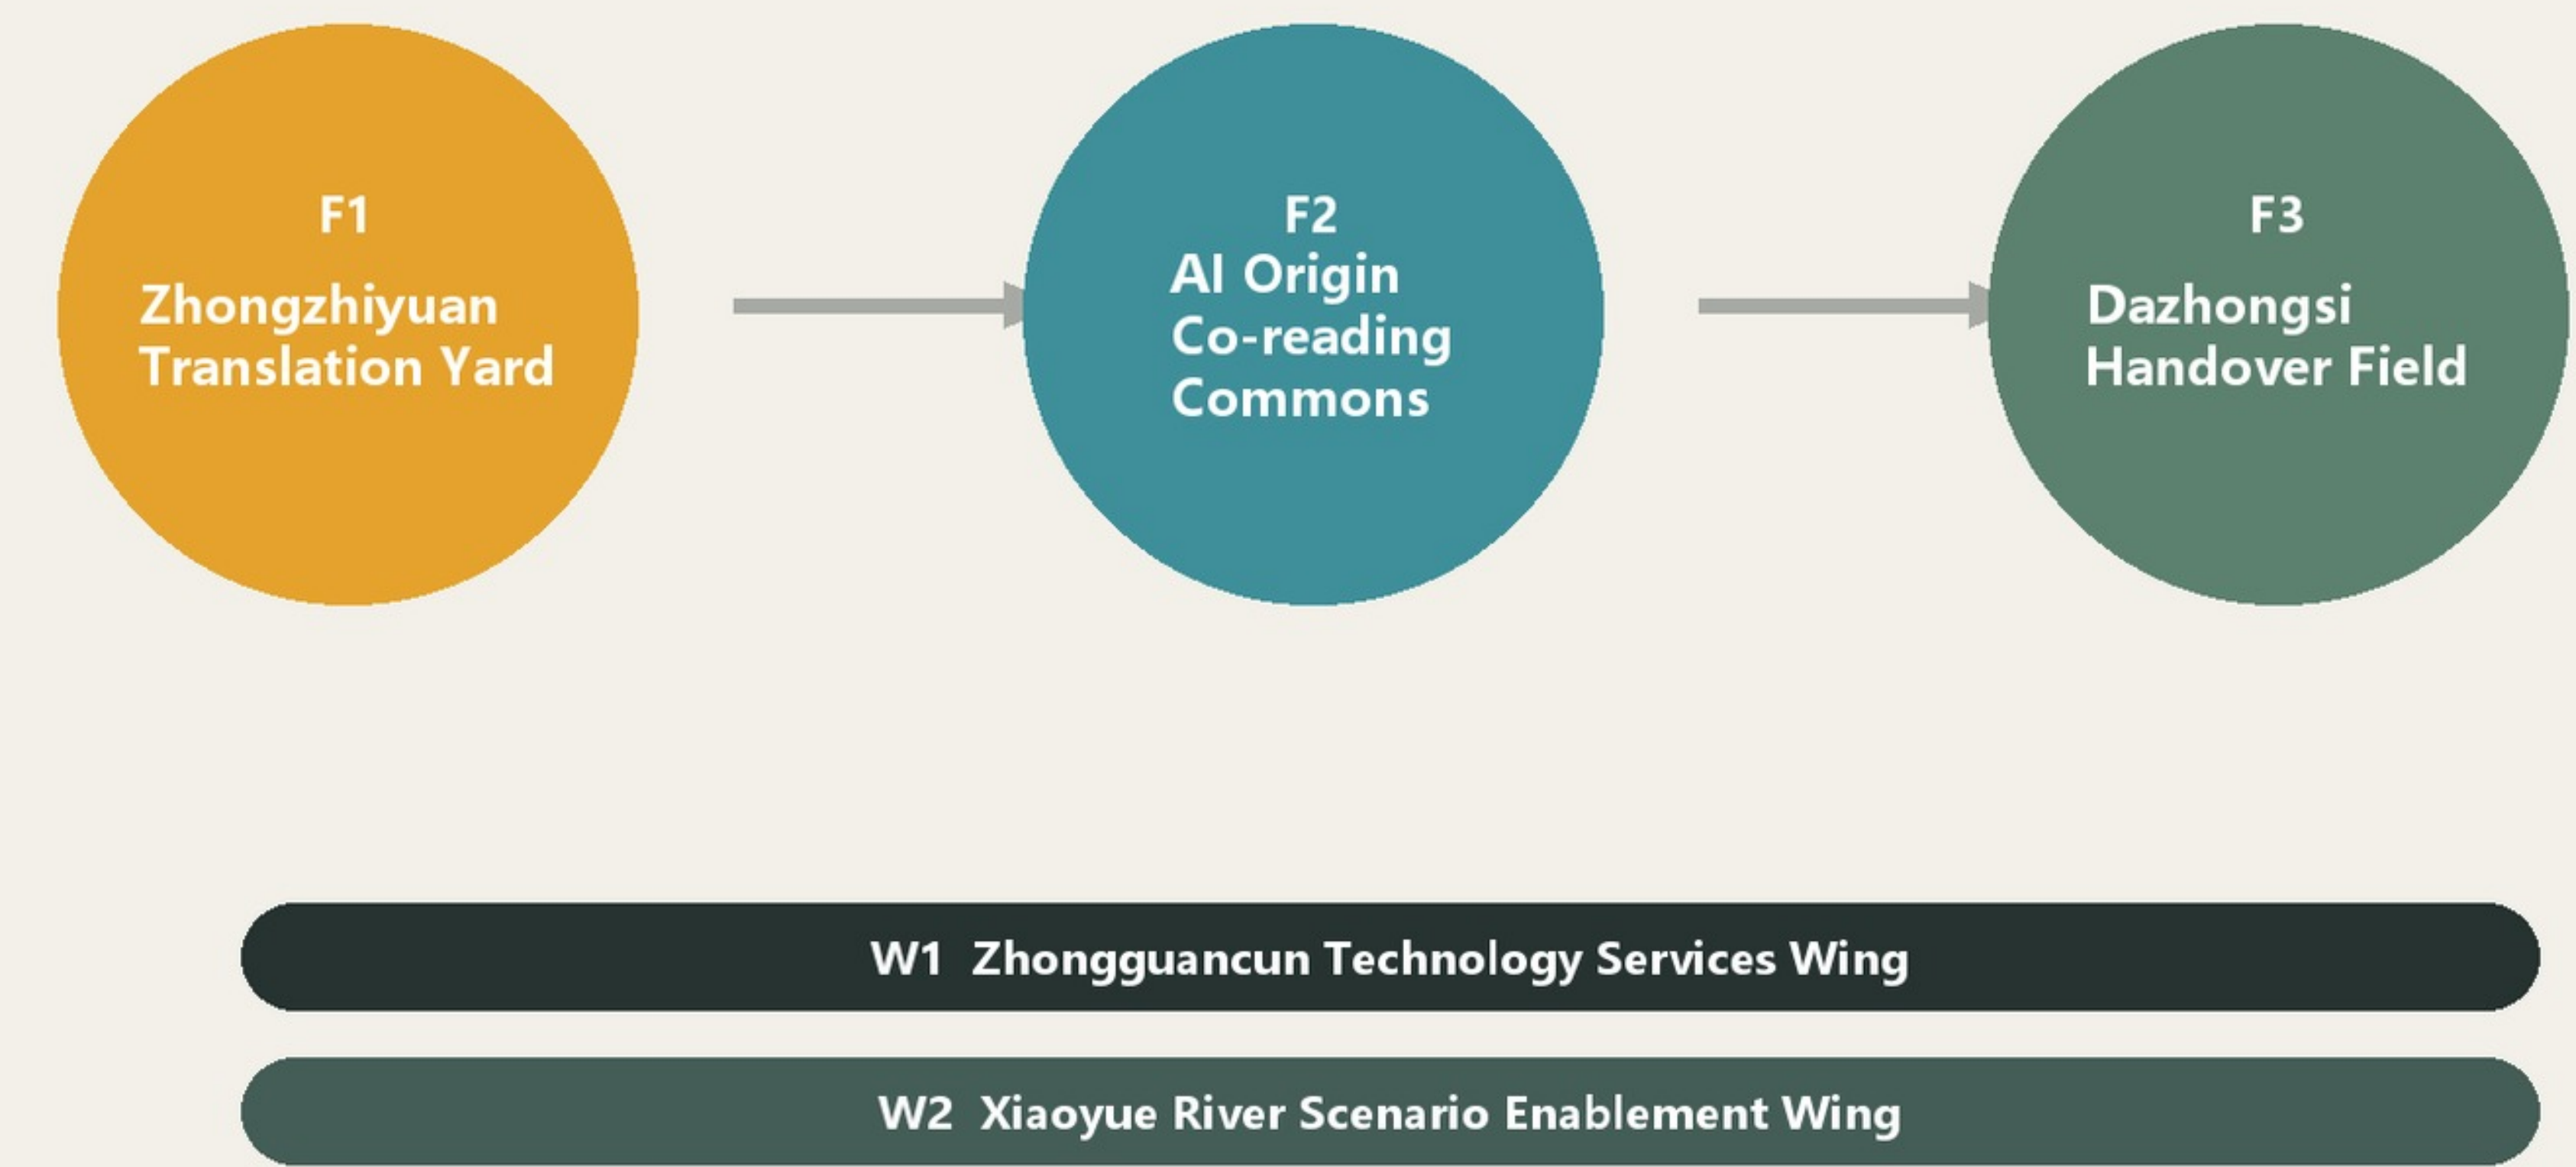

Visual × tactile × machine; uncertainty always defaults to stop

02 / VALIDATION CHAIN

THREE FIELDS, TWO WINGS

Validate → co-read → hand over; two wings connect expertise and community feedback

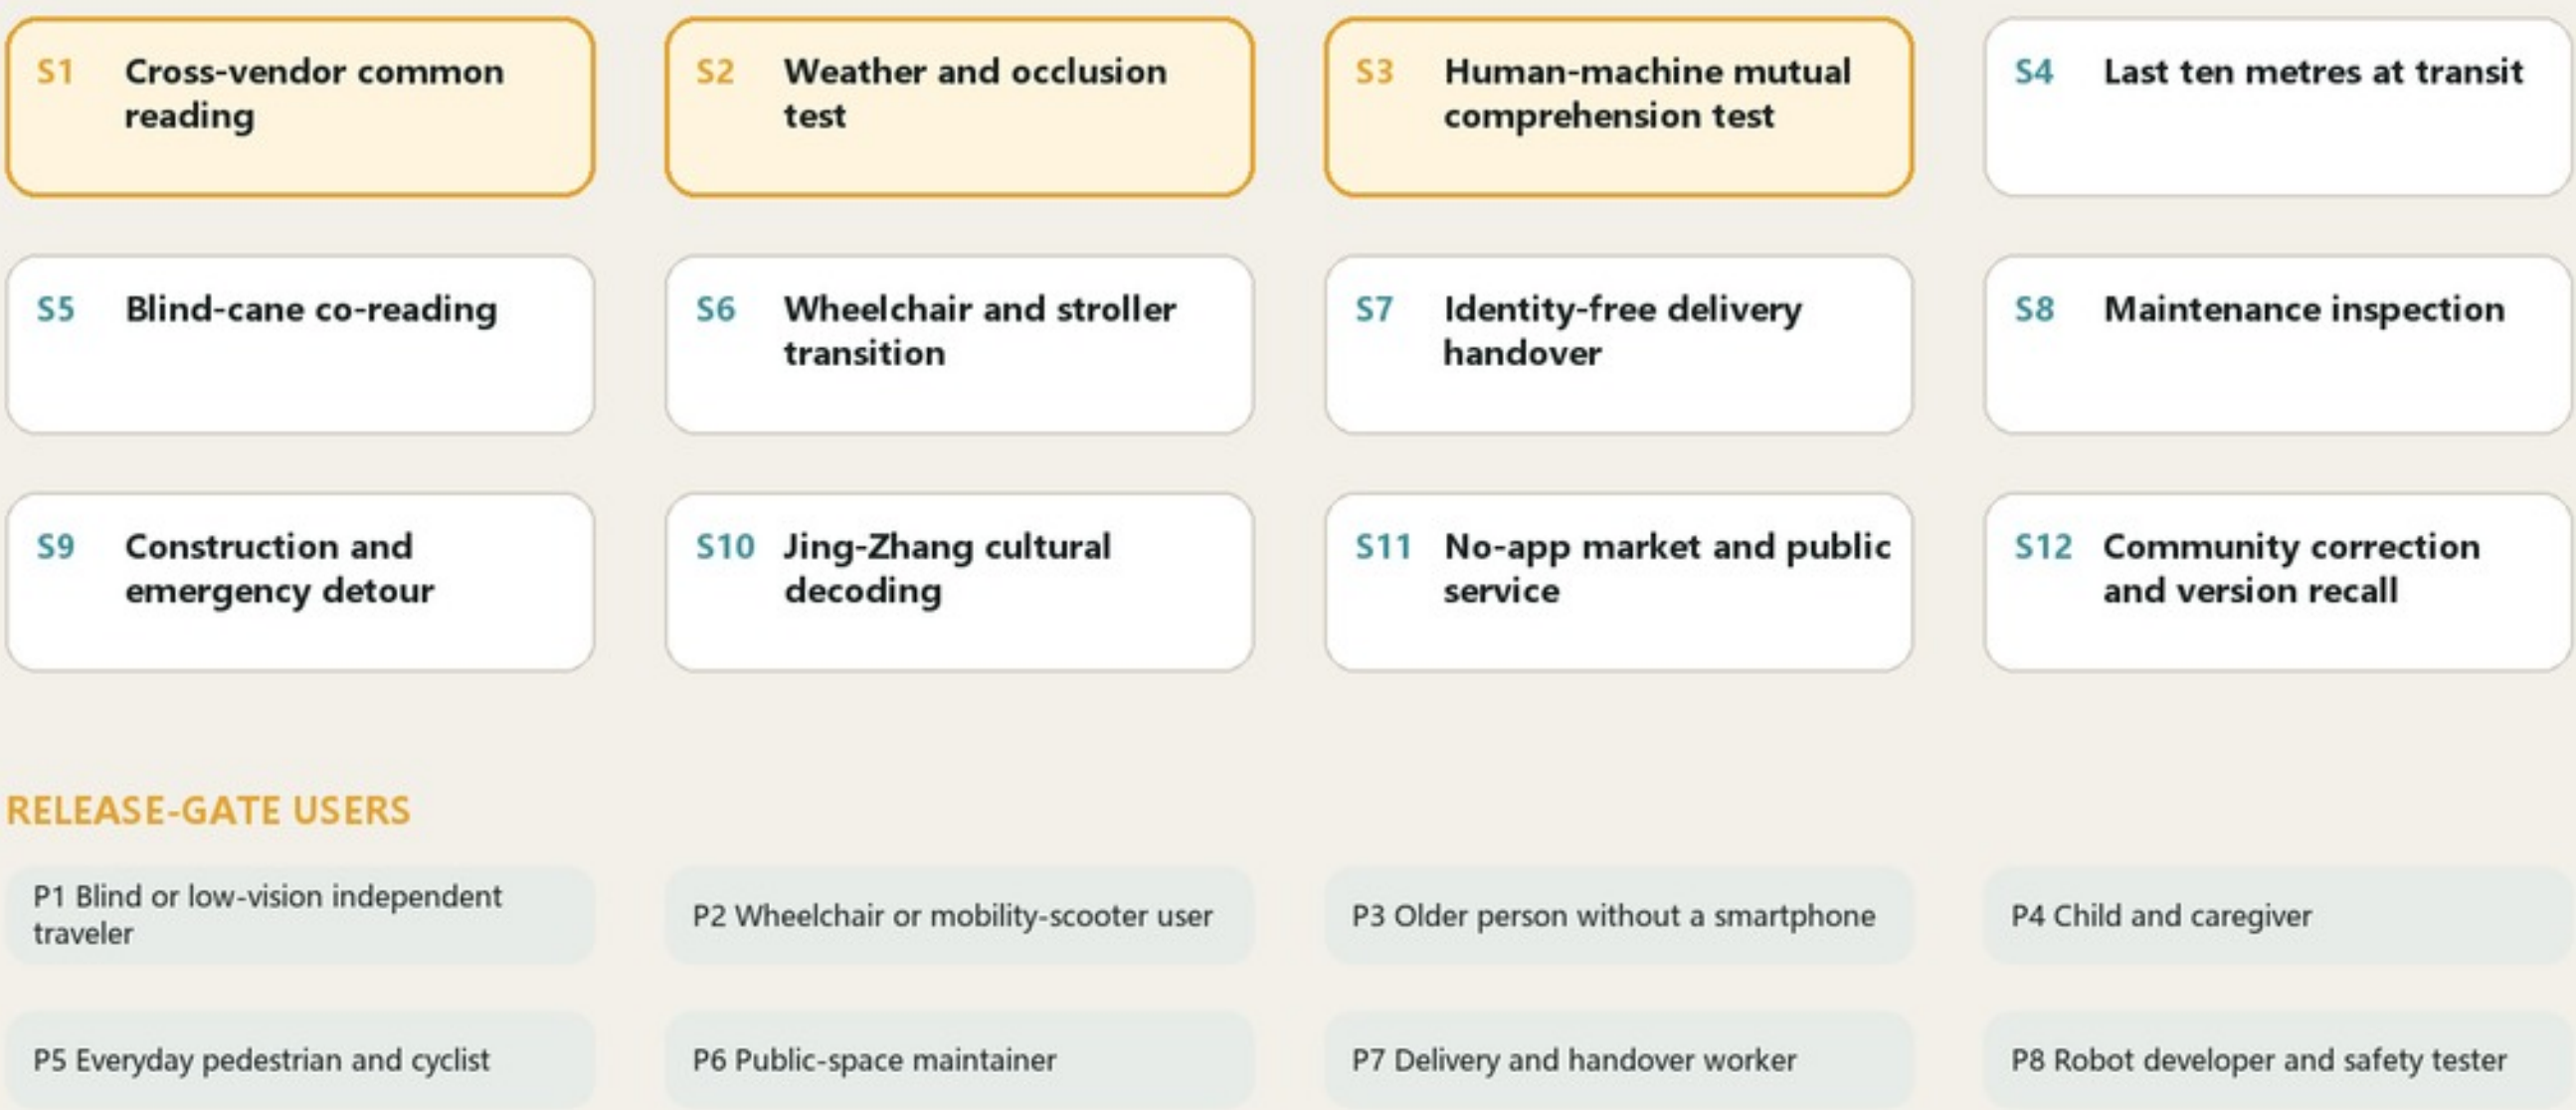

Dazhongsi shows programme logic only; its provisional geometry has a known location issue

03 / PUBLIC USE

TWELVE SCENARIOS, EIGHT USER GROUPS

The first three validate interoperability; the rest test everyday equity and recovery

机器没有效率优先权 / MACHINES GAIN NO PRIORITY FROM EFFICIENCY

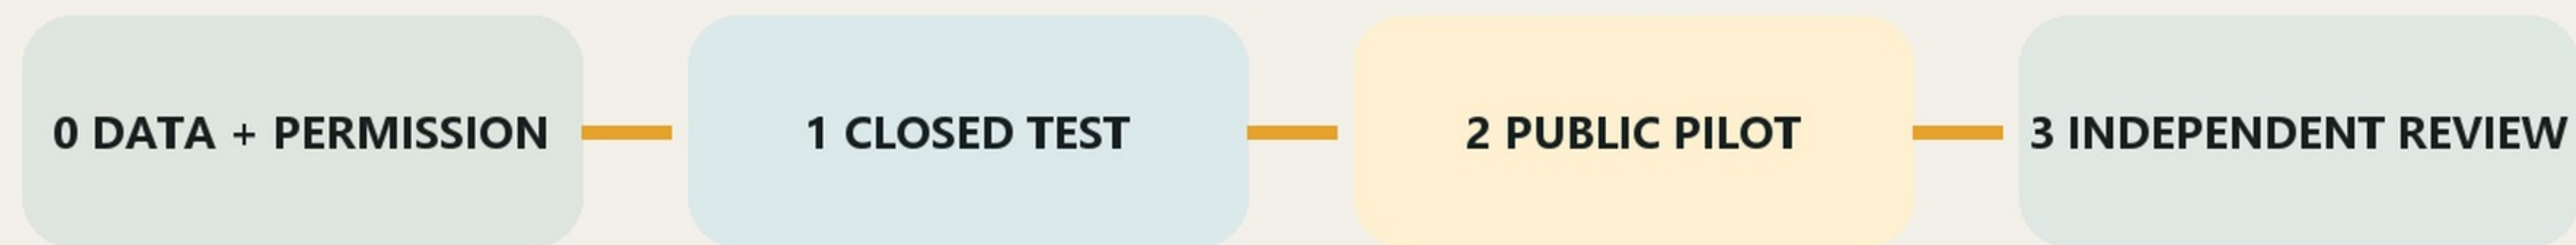

REVERSIBLE PILOT AND EVIDENCE BOUNDARY

Validate 100-200 metres first: never substitute false precision for professional work

04 / REVERSIBLE PILOT

TEST FIRST. EXPAND ONLY WITH EVIDENCE.

100–200 m, staffed and removable; safety, accessibility and public governance release together

SEVEN RELEASE GATES

MEASURE OUTCOMES, NOT INSTALLED AREA

NO FACE • NO DEVICE ID • NO CONTINUOUS TRAJECTORY

- 1 Seven release gates jointly decide public entry
- 2 No faces, device identities or continuous trajectories
- 3 Official boundary, road, parcel, heritage and utility data remain pending
- 4 Dazhongsi is programme logic only, with no station-level placement
- 5 Failure triggers rollback; success advances through an open version

TECHNOLOGY MAY UPDATE. PUBLIC PRINCIPLES MAY NOT CHANGE SILENTLY.
