

ONE LINE • THREE TRANSLATIONS • SIX WORDS

GROUND LANGUAGE

PUBLIC-SPACE RULES
PEOPLE CAN UNDERSTAND
AND MACHINES MUST OBEY

Chozzc × OpenAI Codex (GPT-5)

CONCEPT ATMOSPHERE - NOT SITE OR ENGINEERING EVIDENCE

SIX WORDS, THREE TRANSLATIONS

Visual, tactile and machine readings share one public state

SIX WORDS, THREE TRANSLATIONS

Visual × tactile × machine; uncertainty always defaults to stop

G1 Proceed

Continue along this direction; it grants no priority.

VISUAL

TACTILE

MACHINE

G2 Yield

Machines and service flows return priority to people here.

VISUAL

TACTILE

MACHINE

G3 Edge

This is a boundary that must not be crossed or requires human

VISUAL

TACTILE

MACHINE

G4 Berth

Short stops, loading or handover belong here, outside the continuous

VISUAL

TACTILE

MACHINE

G5 Help

Anyone can obtain phone-free human help or report a problem here.

VISUAL

TACTILE

MACHINE

G6 Change

Rules, route or infrastructure ahead have temporarily changed; read

VISUAL

TACTILE

MACHINE

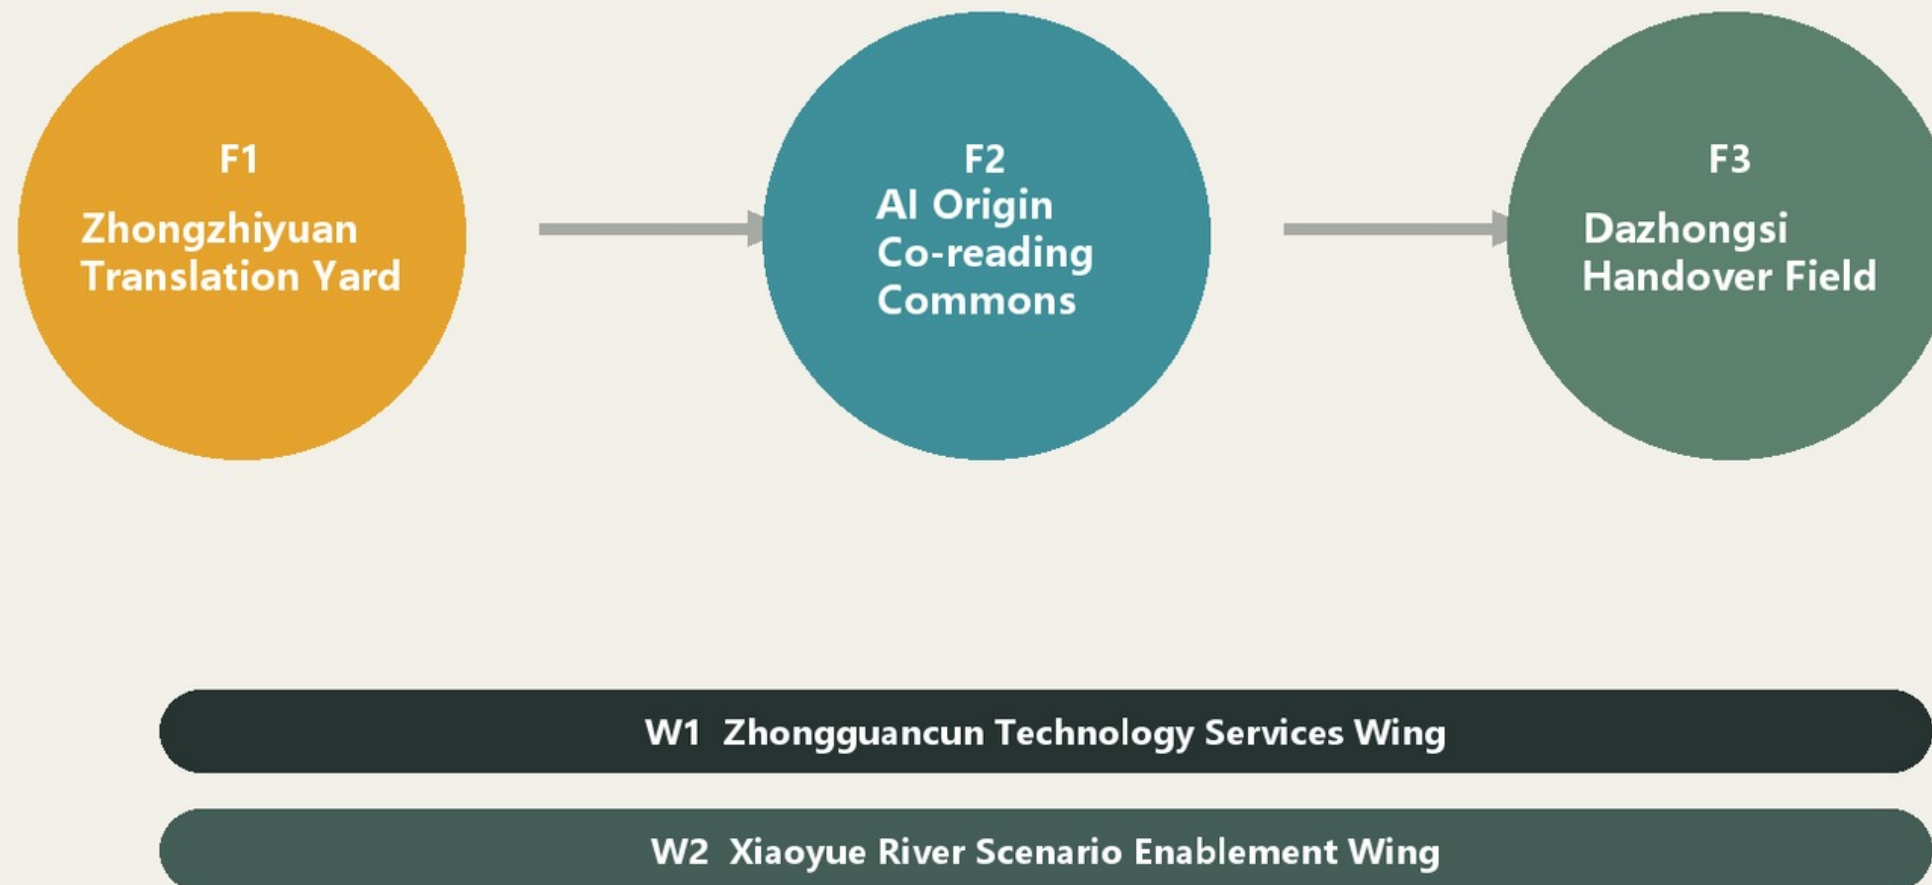

JZ.GL / 02

THREE FIELDS, TWO WINGS

Validate at Zhongzhiyuan, co-read at AI Origin, hand over at Dazhongsi

THREE FIELDS, TWO WINGS

Validate → co-read → hand over; two wings connect expertise and community feedback

Dazhongsi shows programme logic only; its provisional geometry has a known location issue

TWELVE SCENARIOS, EIGHT USER GROUPS

Three industrial tests and nine everyday equity scenarios

03 / PUBLIC USE

TWELVE SCENARIOS, EIGHT USER GROUPS

The first three validate interoperability; the rest test everyday equity and recovery

S1 Cross-vendor common reading	S2 Weather and occlusion test	S3 Human-machine mutual comprehension test	S4 Last ten metres at transit
S5 Blind-cane co-reading	S6 Wheelchair and stroller transition	S7 Identity-free delivery handover	S8 Maintenance inspection
S9 Construction and emergency detour	S10 Jing-Zhang cultural decoding	S11 No-app market and public service	S12 Community correction and version recall

RELEASE-GATE USERS

P1 Blind or low-vision independent traveler	P2 Wheelchair or mobility-scooter user	P3 Older person without a smartphone	P4 Child and caregiver
P5 Everyday pedestrian and cyclist	P6 Public-space maintainer	P7 Delivery and handover worker	P8 Robot developer and safety tester

机器没有效率优先权 / MACHINES GAIN NO PRIORITY FROM EFFICIENCY

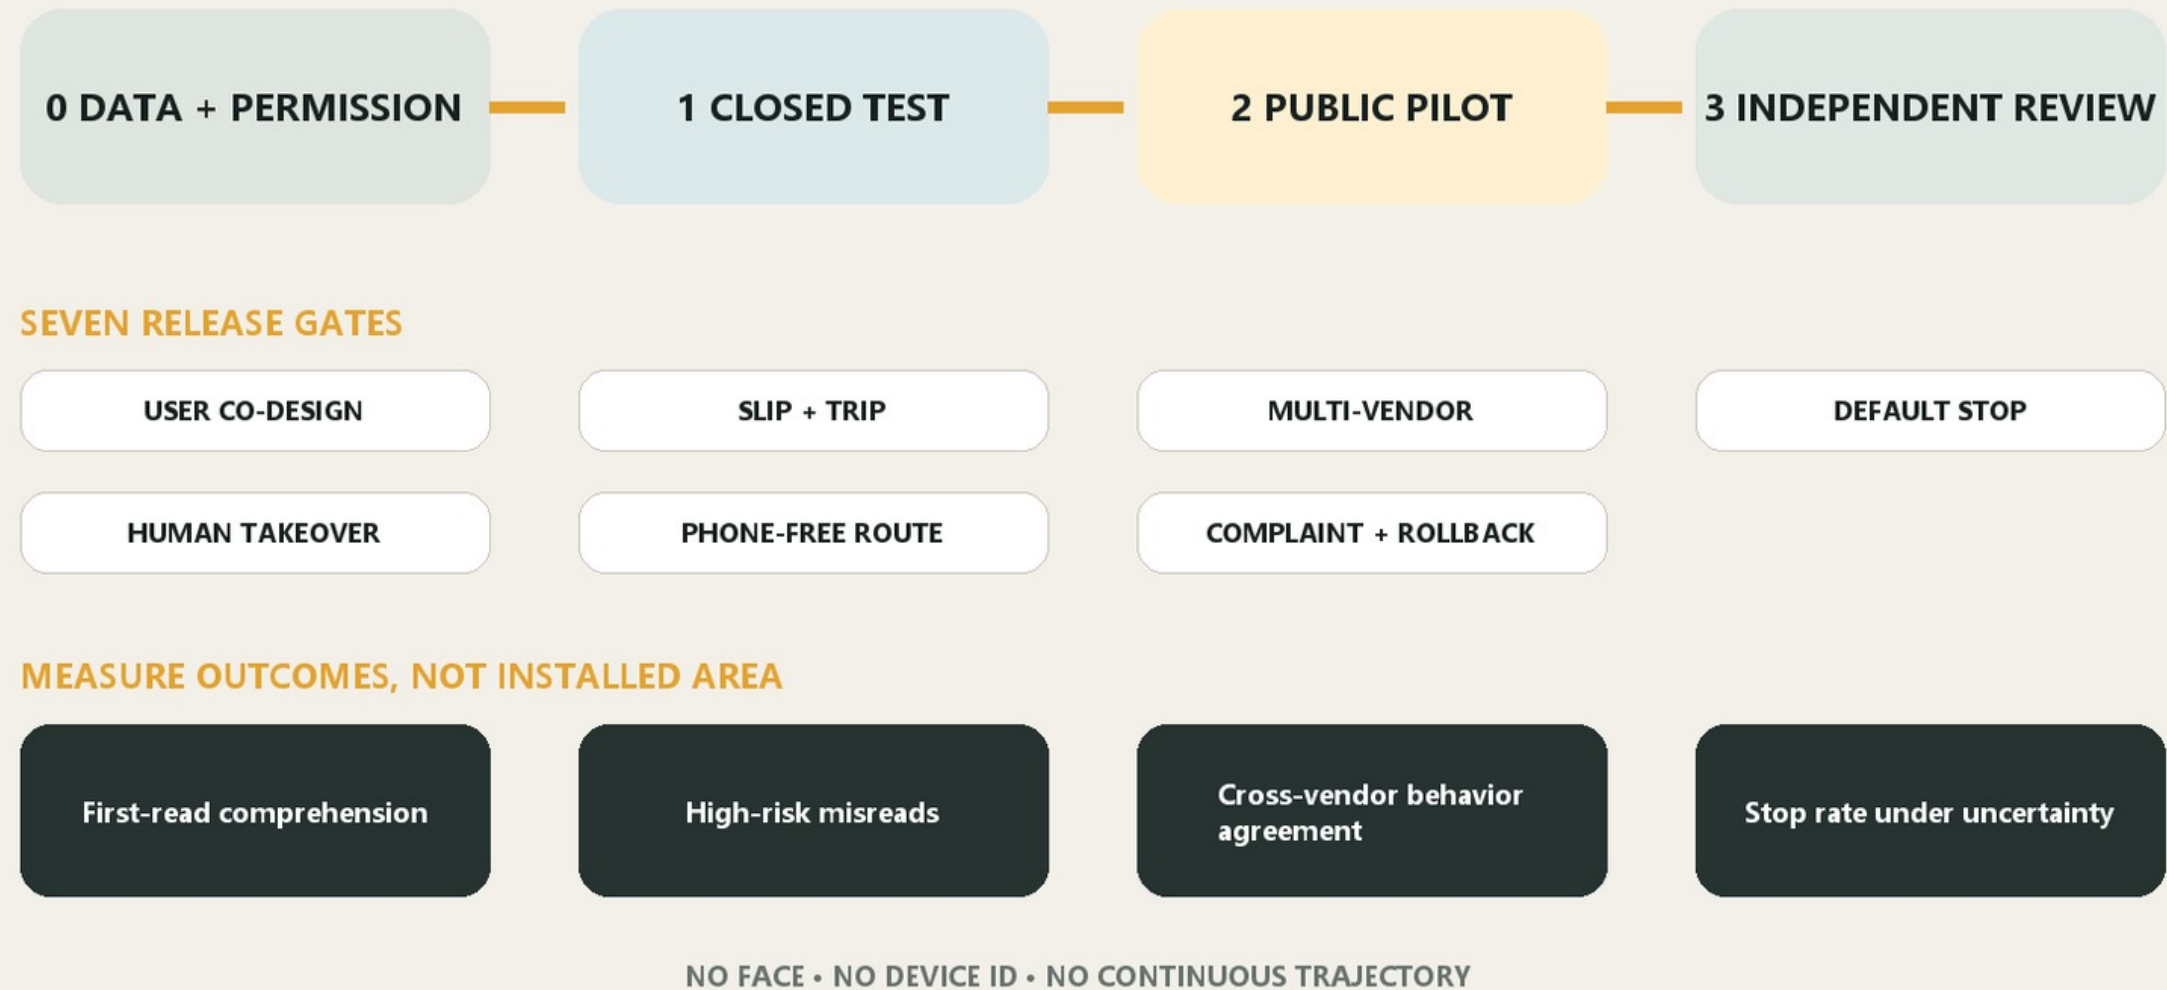

TEST FIRST, THEN DECIDE

100-200 metres, staffed and removable

04 / REVERSIBLE PILOT

TEST FIRST. EXPAND ONLY WITH EVIDENCE.

100–200 m, staffed and removable; safety, accessibility and public governance release together

THREE PUBLIC LANDMARKS

Make machine rules tangible and debatable within Jing-Zhang culture

YIELD MARKER

Machines yield first: the corridor covenant

STONE ZERO

Publish the grammar, tests and revision history

HANDOVER BELL

Make takeover and major updates perceptible

Reversible installations; never attach to unverified railway heritage fabric or replace statutory signs.

EVIDENCE BOUNDARIES AND NEXT WORK

Provisional geometry supports concept review, not approval or engineering claims

Official scope and key-area polygons are absent

The provisional Dazhongsi centroid has a known ~2.26 km location issue

Road, parcel, building, heritage and utility surveys are absent

FAR, retain-renovate-demolish quantities and engineering quantities remain unknown

Next: official data - user co-design - material and reading tests - multidisciplinary review - independent safety release.

A MACHINE COVENANT THE PUBLIC CAN REJECT

Technology may update; public principles may not change silently

HUMAN PRIORITY • IDENTITY-FREE ACCESS • VISIBLE FAILURE • ACCOUNTABLE RESPONSIBILITY

If the test fails, the ground can be restored. If it succeeds, the city gains an open, replicable and auditable layer of public AI infrastructure rather than a proprietary facility.

Public cases: Japanese and UK tactile guidance, MTA Accessible Station Lab, ITU-T F.921, AprilTag, ISO/TR 4448-1, Open-RMF and Boston's delivery-robot pilot. Full links and limits are in [sources.json](#).
