

Centennial Jing-Zhang AI Innovation Belt — International Urban Design Open Call

JINGZHANG SELF-BUILT BELT

From China's first self-built railway to a self-built AI belt

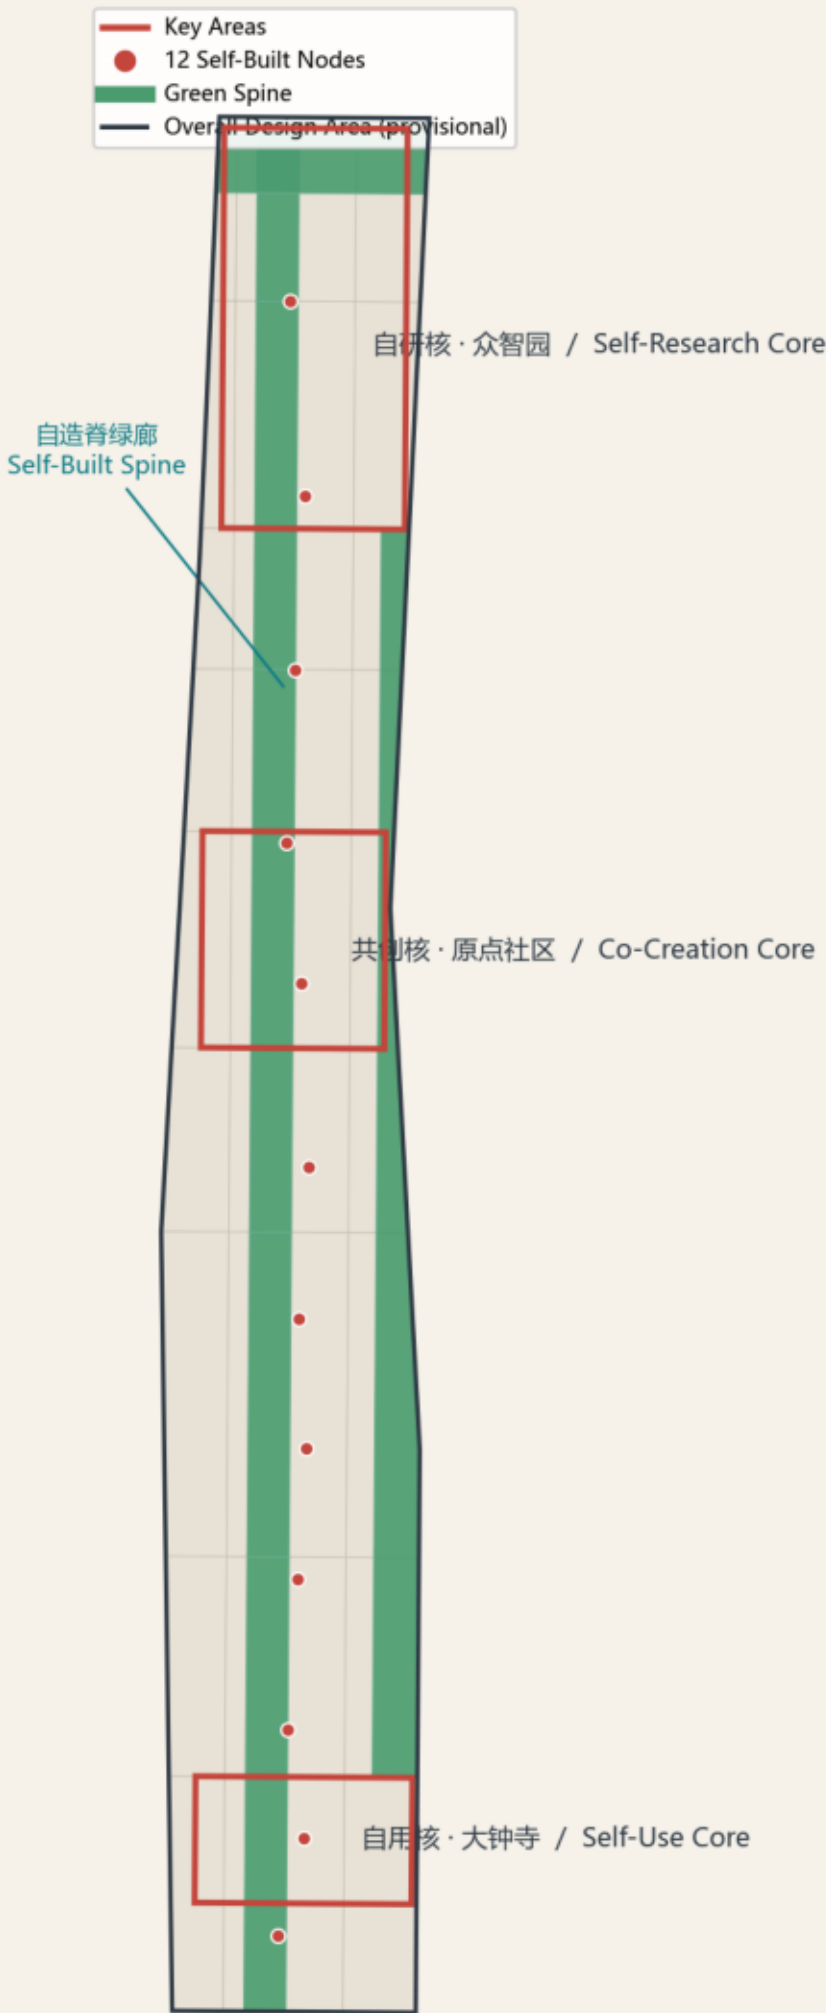

Built by ourselves. Built to last.

One Spine · Three Cores · Two Wings · Twelve Self-Built Nodes | ParticleLight · Claude Code

Overall Concept & Spatial Structure

JINGZHANG SELF-BUILT BELT — Overall Concept & Spatial Structure

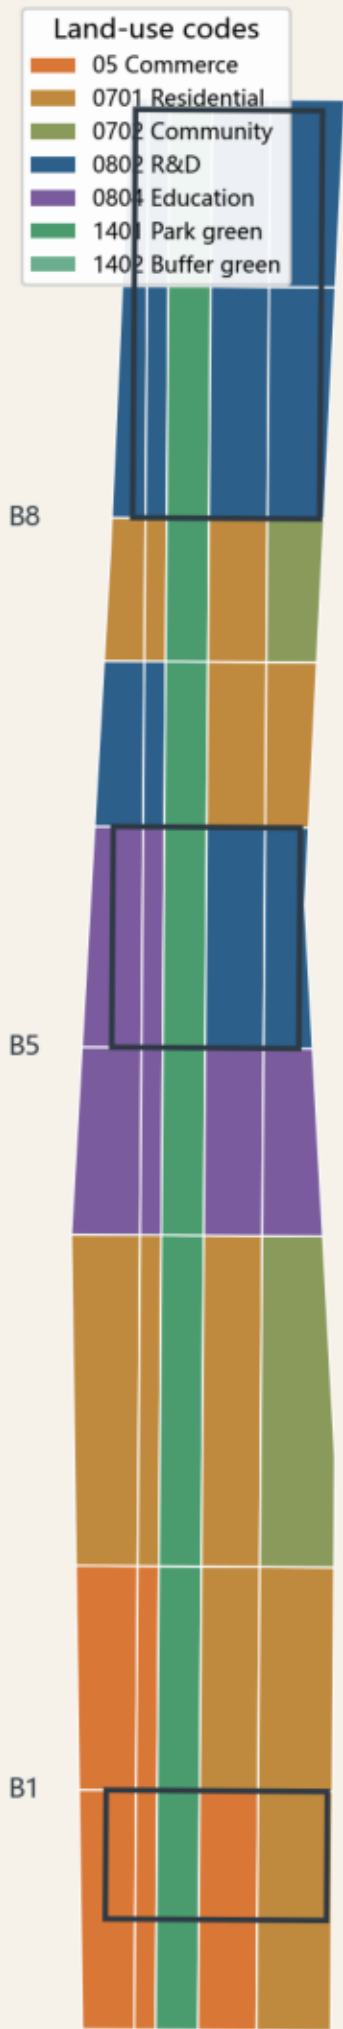

One Spine · Three Cores · Two Wings · Twelve Self-Built Nodes

Land Use Structure

Land Use Structure — Spine & Five-Column N–S Banding

Green spine N–S; R&D / education / residential / commerce bands beside the three cores

Land-use zones are conceptual; areas recalculated in EPSG:4548; full coverage without gaps or overlaps.

Three Key Areas Detailed Design

Three Key Areas — Self-Research · Co-Creation · Self-Use

Zhongzhiyuan · AI Origin Community · Dazhongsi

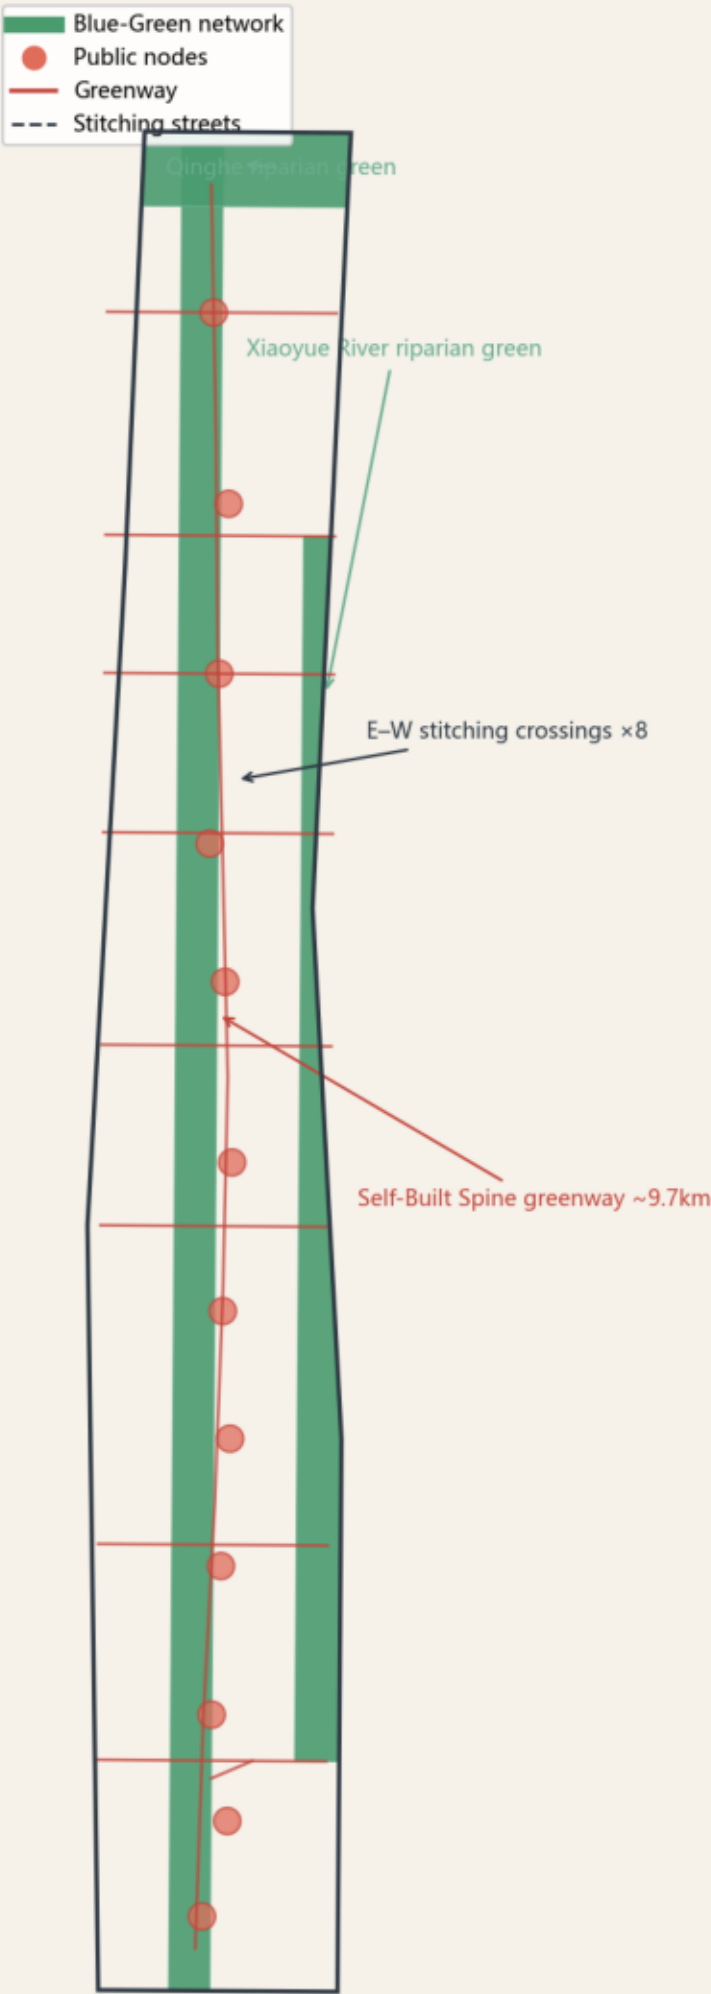

Key-area polygons are provisional constraints; positioning and spatial moves are conceptual suggestions.

Mobility & Blue-Green System

Mobility, Blue-Green Network & Public Space System

N-S continuity · E-W stitching · twelve nodes

Greenways and stitching routes are conceptual alignments, not road redlines; key crossings need professional transport review.

Spine greenway + 8 E-W stitching + riparian belts

OVERALL CONCEPT

JINGZHANG SELF-BUILT BELT

In 1909 Zhan Tianyou and Chinese engineers self-built the Jing-Zhang Railway — China's first trunk line fully surveyed, designed, constructed and managed by Chinese people. Completed in four years, under budget, connected to the world on standard gauge, it served for over a century. That was the first proof of self-built. In 2026 the same corridor must self-build an AI innovation belt that is built well, usable and governable, verified by people, auditable and reversible.

SPATIAL STRUCTURE

One Spine: Self-Built Spine greenway (~9.7 km).

Three Cores: Self-Research (Zhongzhiyuan) · Co-Creation (AI Origin Community) · Self-Use (Dazhongsi).

Two Wings: Service (Zhongguancun) · Test (Xiaoyue River).

Twelve Self-Built Nodes: AI scenario public nodes along the spine.

GOVERNANCE CORE: SELF-BUILT COVENANT

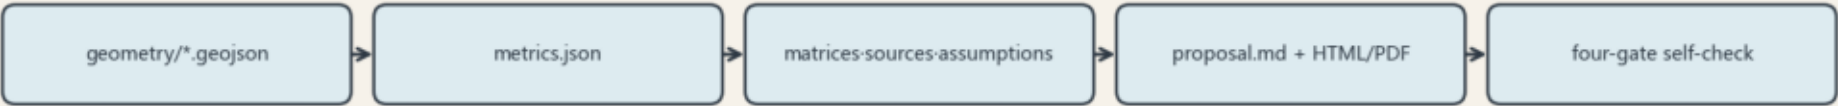

Autonomy (traceable) · Responsibility (answerable) · Self-Reflection (reversible)

Build / Operations / Exit certificates make every AI entry traceable, answerable and reversible.

Metrics & Evidence Chain

Recalculated Core Metrics & Evidence Chain

Geometry → Metrics → Evidence → Deliverables → Self-check

Known metrics are recalculated from submitted GeoJSON in EPSG:4548; unknown control metrics await official data — no fabricated values.

GLOBAL AI EVENTS & LONG-TERM OPERATIONS

Annual system: Spring Self-Built Festival · Summer Open-Source Week · Autumn JZ AI Marathon · Winter Bell Season; monthly community forums.

Developer community: open-source release hall, growing Origin Stele honor wall, night labs, scenario open days.

Conversion path: event participation → scenario application → pilot placement → space & policy match → long-term stay.

Brand assets: Self-Built Belt naming system, the 'self + herringbone rail' logo, the three-self/three-certificate public interface.

All events and mechanisms are operating concepts, not confirmed government arrangements, budgets or commitments.

CULTURAL NARRATIVE

Railway culture as structure · Zhongguancun culture as method · AI new culture as contract.
