

JING-ZHANG HOMEBASE

Put daily life at the base of innovation

- Test: can a person complete an ordinary day here?
- Housing, care, learning, night services, and public space are innovation infrastructure.
- This is a G0 open-data concept, not a plan approval, engineering design, or public commitment.

JING-ZHANG HOMEBASE / 01 · V1.1

Not only a place to work — a place to stay

Housing, care, learning, night services, and public space complete the everyday infrastructure of innovation.

SPATIAL STRUCTURE

One spine, three live-work segments, two service interfaces

- The daily-life spine links movement, shade, essentials, and heritage reading.
- Housing alternates with research, learning, service, and park space; its share is a scenario.
- FAR, height, ownership, and retain-renovate-demolish wait for official evidence.

JING-ZHANG HOMEBASE / 02 · V1.1

One daily-life spine links home, research, learning, and care

Functions do not close into enclaves; they connect through a person's daily schedule.

THREE PROTOTYPES

One goal, different daily schedules

- Zhongzhiyuan: a live-next-to-test workshop.
- AI Origin: homes, learning, childcare, and elder support form a live-learn neighbourhood.
- Dazhongsi: an international arrival room whose location requires official verification.

JING-ZHANG HOMEBASE / 03 · V1.1

Three areas, three testable living prototypes

01

**Zhongzhiyuan /
Live-next-to-test workshop**

- short stay + R&D
- shared equipment
- supervised test garden

Gate: operator, human review, and pause control

02

**AI Origin / Live-learn
neighbourhood**

- family homes
- childcare + classes
- all-age services

Gate: operator, human review, and pause control

03

**Dazhongsi / International arrival
room**

- bilingual checklist
- night services
- location to verify

Gate: operator, human review, and pause control

SIX PEOPLE, TWELVE SCENES

Every card has a human entrance and stop condition

- Serve researchers, start-ups, night workers, families, older residents, and international visitors.
- Three tests: equipment booking, enclosed low-speed delivery, and environmental comfort sensing.
- Basic services require neither faces nor precise traces; high-impact decisions stay human.

MOBILITY + BLUE-GREEN

Make the way home work first

- Walking, cycling, and greenway lines connect seven east-west interfaces to verify.
- Public courtyards combine rest, play, older adults' walks, history, and low-intensity trials.
- Concept lines never replace road, rail, bridge, tunnel, or utility engineering.

JING-ZHANG HOMEBASE / 04 · V1.1

Map the way home, green space, and public services together

Verify night travel, accessibility, and conflict points before new engineering.

Conceptual connections, not road or rail engineering alignments

PROJECTS + ACCOUNTABILITY

Test reversible work before permanent work

- Begin with field and accessibility audits, six-persona interviews, a night-service map, and temporary stations.
- Space, data, staffing, maintenance, and complaint ownership are named before a pilot.
- AI organises evidence and options; people and competent professionals make final decisions.

FOUR GATES

No evidence, no escalation

- G1: field, users, operator. G2: official controls, ownership, and multi-disciplinary review.
- G3: small, pausable, staffed pilot. G4: public-value, safety, cost, and equity review.
- Phasing is conditional order, not a date, budget, or investment promise.

JING-ZHANG HOMEBASE / 05 · V1.1

G0 OPEN-DATA CONCEPT

G1 FIELD + PEOPLE

G2 OFFICIAL DATA + REVIEW

G3 LIMITED PILOT

G4 REVIEW BEFORE SCALE

FAR, height, density, road redlines, parking, and utility capacity remain UNKNOWN. Matrix 'complete' means this submission answers the item and exposes its gaps.

RISK + NEXT STEP

Keep unknown values unknown

- The highest risk is mistaking provisional geometry and scenarios for public decisions.
- Next: fieldwork, resident-worker-operator input, official data, then professional deepening.
- Figures, metrics, sources, assumptions, and matrices remain traceable in the package.
