

JINGZHANG SPIKE

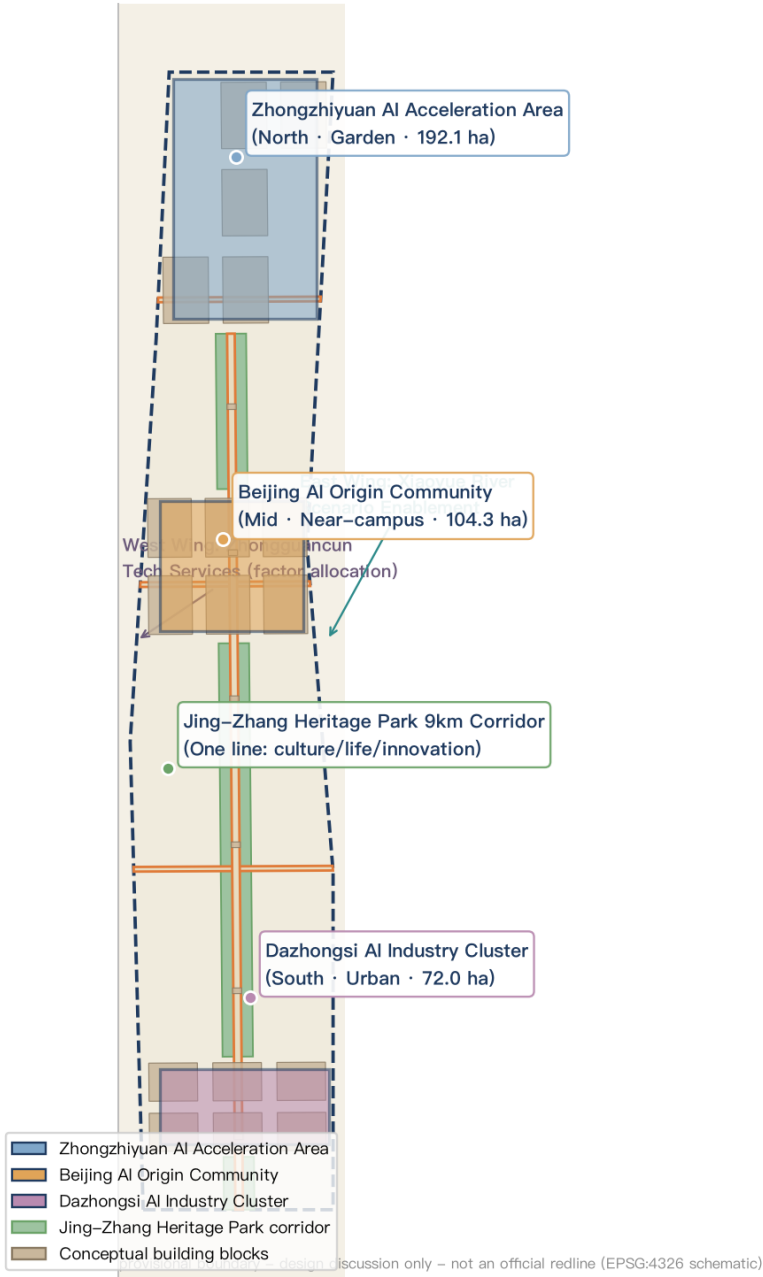

Nailing AI into the Real City - a Public Connection Layer

A railway spike fixes the rail to the sleeper; a software spike turns uncertainty into a verifiable prototype. The AI Innovation Belt becomes a public connection layer: every AI innovation passes a city-scale spike test before being reliably nailed into the real city.

Motif: railway spike (smallest connector) x software spike (verification prototype). Three positionings, five functions, the three-zones-two-wings feedback loop, six agent tasks, pilgrimage landmarks, and long-term operation all revolve around nailing AI into the real city.

JINGZHANG SPIKE · Site Overview & Spatial Structure

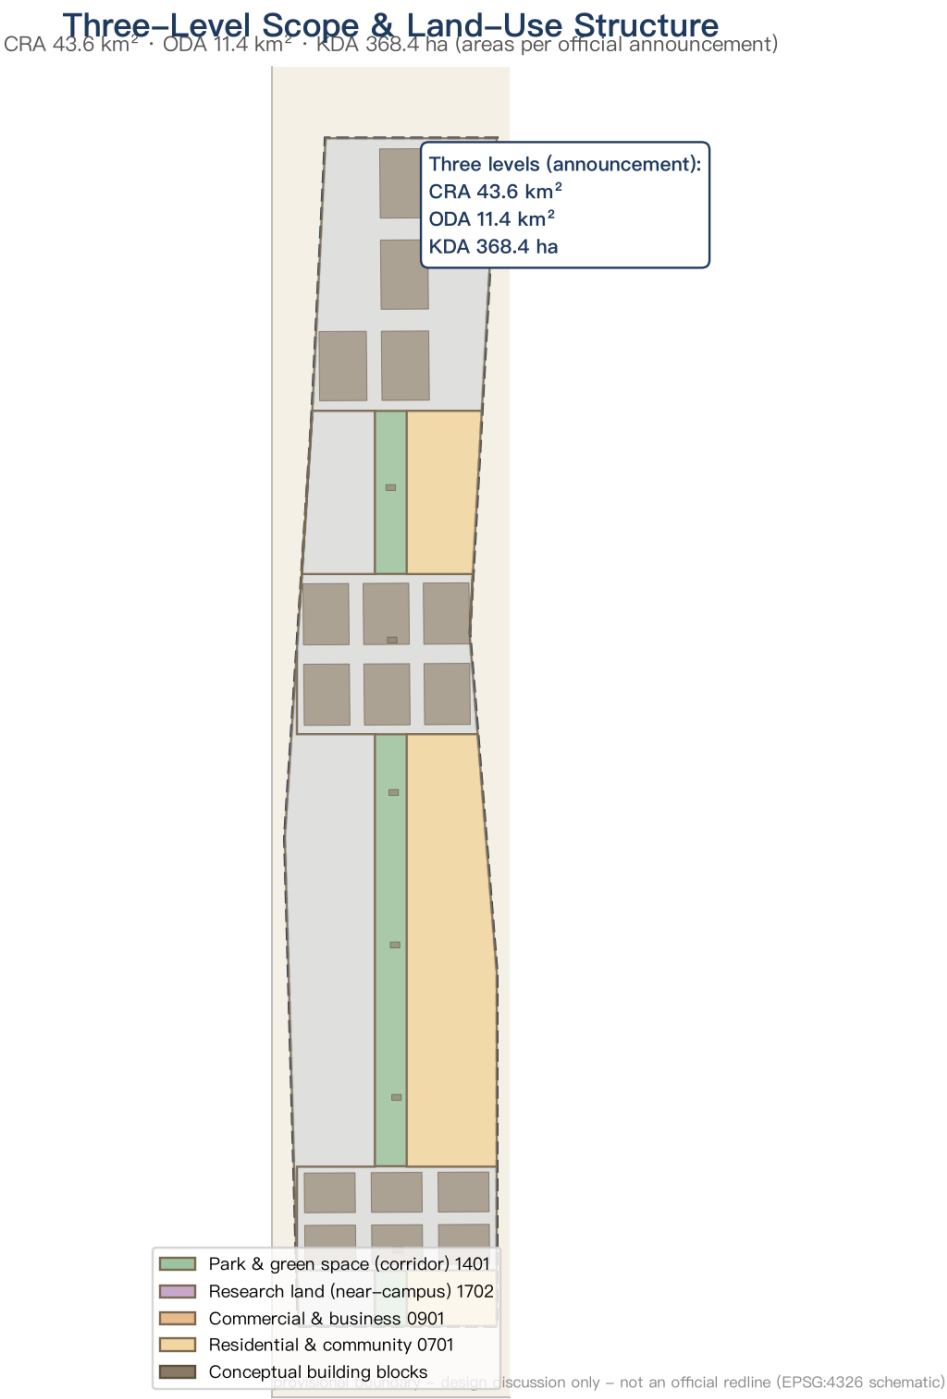

Overall Design Area (provisional) · One Corridor, Three Spikes, Two Wings

Provisional boundary - design discussion only - not an official redline. Recompute when official polygons are released.

Three-Level Scope

Coordinated Research Area 43.6 km2 - industrial ecosystem and future urban form; Overall Design Area 11.4 km2 - urban renewal at regulatory depth; Key-Area Detailed Design Area 368.4 ha - three key districts in detail.

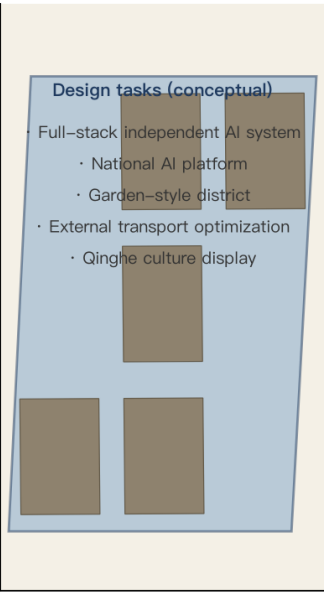

Provisional boundary - design discussion only - not an official redline. Recompute when official polygons are released.

Key Areas

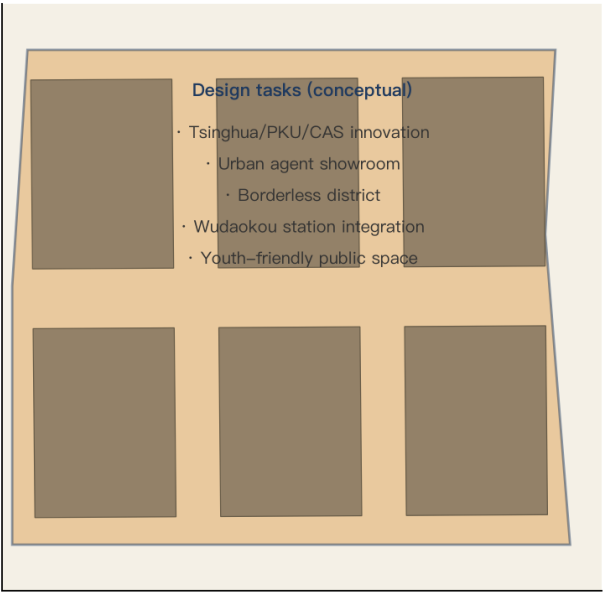

Forge Spike (Zhongzhiyuan): garden-style full-stack self-reliant innovation district; Origin Spike (Beijing AI Origin Community): near-campus urban agent showroom; Hub Spike (Dazhongsi): urban AI-native business cluster.

Three Key Areas – Detailed Design Index (provisional boundary · directional)

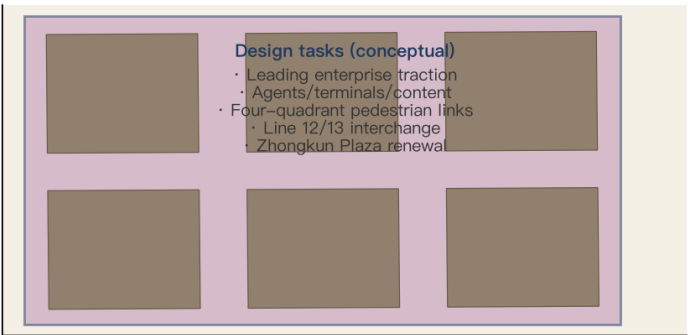

Zhongzhiyuan AI Acceleration Garden · Full-stack · 192.1ha

Beijing AI Origin Community Near-campus · Basic innovation · 104.3ha

Dazhongsi AI Industry Cluster Urban · AI-native · 72.0ha

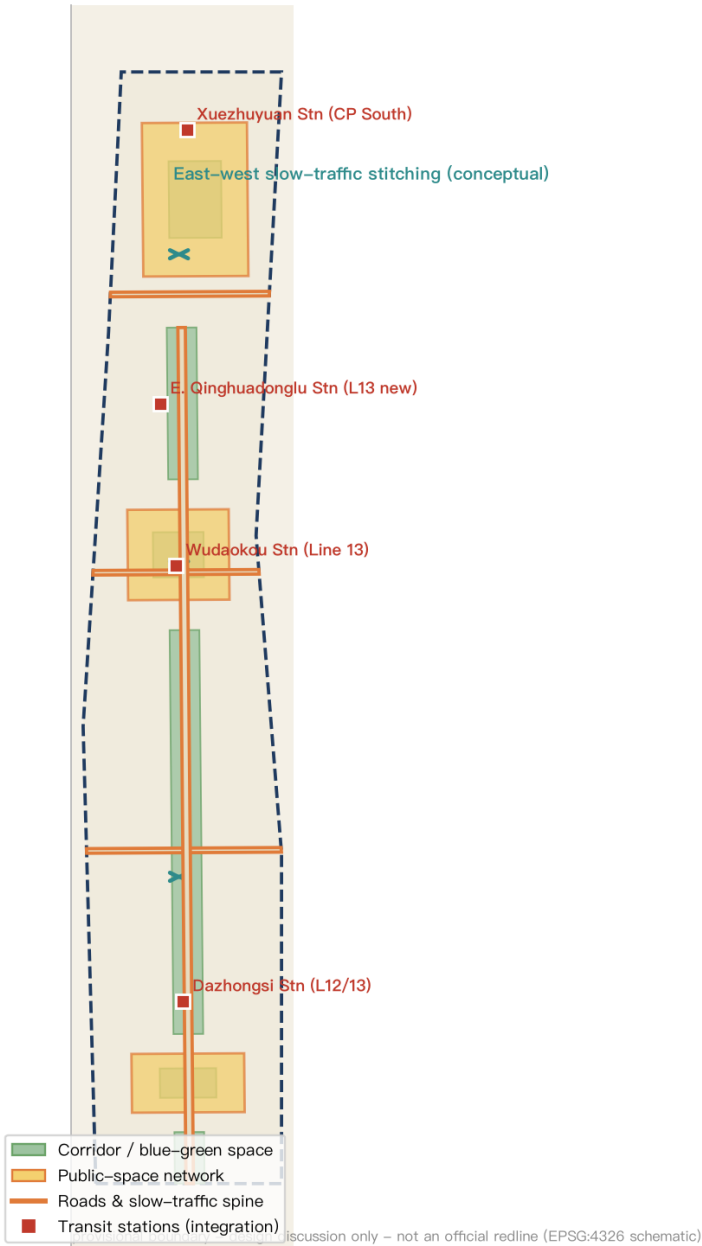

Provisional boundary - design discussion only - not an official redline. Recompute when official polygons are released.

Mobility, Blue-Green & Public Space

Transit coupling (Wudaokou / East Qinghuadonglu / Dazhongsi / Xuezhuyuan), slow-traffic stitching (9-km corridor spine plus east-west connectors), delivery separation (Xiaoyue River low-speed corridor).

Mobility, Slow Traffic & Blue-Green Public Space System

Transit-station integration · slow-traffic spine · corridor · public-space network (conceptual)

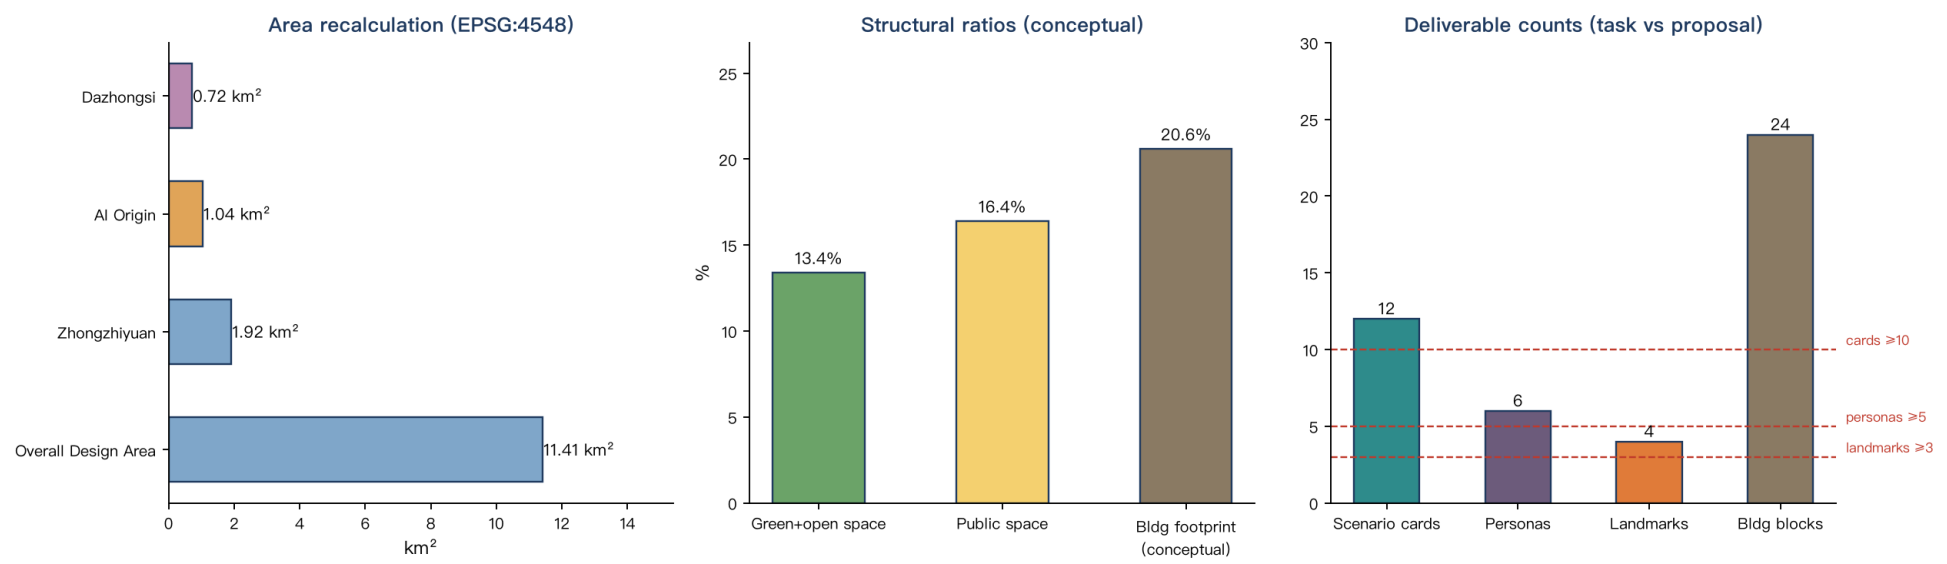

Provisional boundary - design discussion only - not an official redline. Recompute when official polygons are released.

Metrics & Evidence

Overall Design Area 11,412,825 m2 (provisional, matching the announced 11.4 km2); three key-area areas; green and public-space ratios; 12 scenario cards, 6 personas, 4 landmarks. All metrics recomputed in EPSG:4548 and registered in metrics.json.

Core Metrics Recalculation & Evidence Chain (provisional boundary · conceptual)

Provisional boundary - design discussion only - not an official redline. Recompute when official polygons are released.

Scenarios, Operations & Compliance

SC-0	Open-source hall	SC-0	Model test loop (TVS)	SC-0	Safety sandbox (TVS)
SC-0	Urban agent showroom	SC-0	Dazhongsi 4-quadrant (TVS)	SC-0	Pitching lounge
SC-0	Corridor AI guide	SC-0	Edge-compute station	SC-0	Accessible AI services
SC-1	Delivery corridor (TVS)	SC-1	AI open classroom	SC-1	Data-factor parlor

Long-Term Operation (conceptual)

SPIKE DAY annual system: Origin Open-Source Week (spring), Corridor Testing Season (summer), Spike Forum (autumn), Honor Wall Update (winter). Developer community: public data + reproducible evaluation + honor points; scenario opening: apply-sandbox-launch-review.

Compliance

Covers announcement clauses 1.3/1.4/1.5 and agent.1-agent.6; bilingual contract v1 (proposal.md + proposal.en.md); all spatial conclusions are conceptual recommendations; regulatory indicators (FAR/height/redlines) are status=unknown pending official controls.

Provisional boundary - design discussion only - not an official redline. Recompute when official polygons are released.
