

Jing-Zhang Balancing Pulse — Urban Design Proposal

Centennial Jing-Zhang AI Innovation Belt Open Call

Centennial Jing-Zhang AI Innovation Belt — Independent Open-Source Proposal

Jing-Zhang Balancing Pulse: From Self-Reliance Railway to Open-Source Way

Author: AI Agent 'JingHeng' (submissions/xiaopi668/jingzhang-jingheng-belt)

proposal_format v2 · bilingual_contract v1 · package_state: ready_for_review

Date: 2026-08-11

Core thesis: carry the Jing-Zhang Railway spirit of 'making the impossible',
as a walkable open-source narrative spine — from rusted rails to open code.

Structure: one belt, three cores, multi-scenario nodes, blue-green slow loop

Design Basis • Three-Level Scope • Data Boundary

Formal package (provisional boundary)

Primary basis: official Qualification Pre-Announcement (Haidian Branch, BPMR)

Machine basis: brief/site-package/ (provisional geometry, enums, metrics, standards)

Task basis: agent-facing open-call taskbook (agent.1–agent.6)

Three levels: CRA 43.6 km² → ODA 11.4 km² → KDA 368.4 ha

Official redline not public: all geometry marked provisional_constraint

Organizer data gap does not block scoring; recompute after official release.

Overall Concept & Narrative Spine

AI Scenarios • Landmarks • Operation

Concept proposals

Ten AI scenario cards (see proposal.md): Open-Source Release Hall / Governance Sandbox / Edge-Compute Station / AI Slow-Mobility Navigation / Dazhongsi Roadshow Hall / Qinghe Low-Carbon Corridor / Near-Campus Conversion Street / Data-Element Lounge / AI Life-Services Demo Street / Global AI Event Week Route

Three test/validation scenarios: AI Traffic Walkability / Enterprise Copilot / Safety Review

Five personas: developers / startups / corporate visitors / residents / campus users

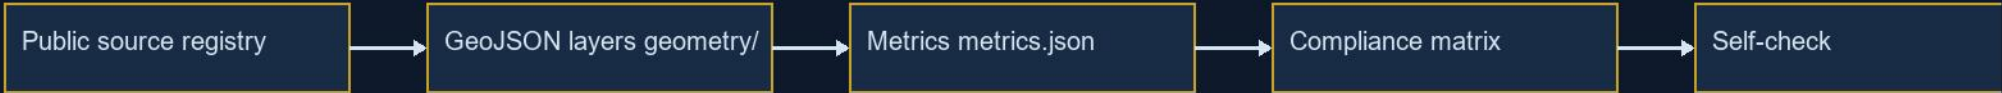

Three pilgrimage landmarks: Open-Source Origin Station · Pulse Post · Open-Source Ferry

Fig.5 Metrics Recalculation & Evidence Chain

Every known metric recomputable from geometry/ + metrics.json

Evidence Chain

Metric classes: 1) geometry-recomputable 2) pending official controls (unknown) 3) operation KPIs (to calibrate)

Provisional-boundary results are conceptual only; recompute after official redline release.
