

Jing-Zhang AI Neural Corridor • Overall Concept

One neural spine · three synapse nodes · two plexus wings · multi-point AI scenarios
Provisional boundary for generation and display only, not an official redline

Figure derived from submitted GeoJSON in EPSG:4548; dashed line is provisional, not a redline.

Land-Use Structure • AI Neural Corridor

Figure: 39 parcels fully cover the submitted boundary without gaps or overlaps; areas recomputed in EPSG:4548; dashed line is provisional.

Figure: key areas are provisional rough polygons; conclusions are directional; concept buildings are not surveys.

Jing-Zhang AI Neural Corridor • Concept / Land Use / Key Areas

Overall concept: translate the century-old Jing-Zhang Railway transport nervous system into an urban AI neural network. One neural spine (heritage park green + slow spine), three synapse nodes (Zhongzhiyuan-Training, Origin Community-Perception, Dazhongsi-Application), two plexus wings (Zhongguancun Service, Xiaoyue River Experience), and multi-point AI scenario nodes (SC-01~10). Key areas are provisional rough polygons; conclusions are directional concepts: Zhongzhiyuan centers on full-stack R&D and governance sandbox, Origin Community on results transfer and open source, Dazhongsi on station-city integration and AI-native business.

Mobility, Slow-Connections & Blue-Green System

Figure: roads, green, public space, and rail station layers jointly support mobility judgments; dashed line is provisional.

Core Metrics Recalculation & Evidence Chain

All metrics recomputed from submitted GeoJSON in EPSG:4548; statutory indicators (FAR, height) pending official conditions.

Jing-Zhang AI Neural Corridor • Mobility / Metrics / Phasing

The neural spine slow axis runs north-south; 8 east-west stitch points repair the fabric cut by the railway. Rail stations (Wudaokou, Qinghua East Rd W, Dazhongs) follow station-city concept. Green ratio approx. 23.7%, public-space ratio approx. 23.5%. All metrics recomputed from submitted GeoJSON in EPSG:4548. Site 11.41 km², concept roads 23.6 km, 39 parcels; statutory indicators (FAR, height) pending official regulatory conditions. Phasing: P1 pilot -> P2 growth -> P3 expansion.
