

Jing-Zhang AI Talent Living Lab Belt

Three 15-minute innovation living circles linked by a public axis, two wings, and a six-stage auditable service loop.

Auditable Service Loop

Provisional rough geometry: for concept generation, visualization, and intake checks only; not an official redline or precise area basis.

Three 15-Minute Innovation Living Circles

Each circle combines work, daily services, public space, learning, social life, and opt-out AI service access.

1 Zhongzhiyuan

Prototype + quality validation

R&D workshop / safety sandbox / trace courtyard

WORK

Three Key Areas: One Loop, Distinct Validation Roles

Differentiation comes from each area's accountability, data boundary, and public value within the service loop.

Zhongzhiyuan AI Acceleration Area

Service prototype and quality validation

Validate

Recommendation logic, safety, interoperability, quality records

Spatial moves

Open workshop, validation courtyard, standards interface

Risk gate

Do not describe testing as approved deployment

SENSE

CONTROL

SERVE

TRACE

FEEDBACK

ITERATE

Beijing AI Origin Community

Near-campus talent living and public feedback

Validate

Usefulness, explainability, voluntary participation, exit

Spatial moves

Collaboration hub, feedback forum, open-source honor ribbon

Risk gate

No private profiling or mandatory digital access

SENSE

CONTROL

SERVE

TRACE

FEEDBACK

ITERATE

Dazhongsi AI Industry Cluster

Enterprise service and scaled adoption

Validate

Enterprise interfaces, operator accountability, public acceptance

Spatial moves

Enterprise desk, urban hall, adoption review

Risk gate

No government, investment, or attraction commitments

SENSE

CONTROL

SERVE

Public Axis, Two Wings, and Low-Intrusion Daily Routes

Mobility, blue-green space, and service nodes form a walkable, opt-out, feedback-ready network; concept lines are not road or rail engineering alignments.

Four Everyday Routes

- 1 R&D validation**
Workshop → quality trace courtyard → public display
- 2 Talent living**
Near-campus collaboration → daily services → feedback → green respite
- 3 Enterprise service**
Transit access → enterprise interface → urban hall → adoption review
- 4 Culture and public life**
Rail heritage → explainable guide → open-source honor → global event

PUBLIC RULES

- Walking and accessibility first
- Digital services can be declined
- Human review on event days
- Public feedback informs the next iteration

Provisional rough geometry: for concept generation, visualization, and intake checks only; not an official redline or precise area basis.

Metrics, Evidence, and Pending Boundaries

Known values describe submitted geometry and explicit counts only; statutory intensity, road area, total floor area, and engineering conditions remain unknown.

Remain unknown: FAR, building heights, total floor area, road redlines and areas, ownership, utility capacity, investment, and government implementation commitments.

Submitted geometry area is approximately 11.41 km², a recalculation of provisional rough geometry only.

Provisional rough geometry: for concept generation, visualization, and intake checks only; not an official redline or precise area basis.

Five Acceptance Gates and a Twelve-Month Minimum Pilot

Every scenario needs accountability, a non-AI equivalent, remedy, and a stop condition; usage alone cannot justify scaling.

12-MONTH PILOT PATH

Default is no scaling: missing accountability, failed non-AI equivalence, unresolved major incidents, or unavailable remedy require holding, rollback, or exit.
