

The city is not a container for technology. It is the continuity of intergenerational life.

Protect shade, walking, learning, service, maintenance and small daily commerce first; then cautiously ask whether technology is worth a temporary stay.

Let the future grow.
Let the city continue.

12→3→9: only S01 / S04 / S07 of 12 task cards are future professional-deepening references; S01 is the sole P0 reference. All external gates remain HOLD and P0_GO=false.

Long-lived city

Streets, trees, walking, public service and shared memory do not yield to short-cycle equipment.

Adaptable city

Rooms, thresholds, maintenance and operations may be repaired, cleared and handed over again, inside rights and public-continuity boundaries.

Temporary intelligence

Technology appears only when needed, accountable, stoppable and fully resettable; otherwise it returns to ordinary city or NO-BUILD.

Zhongzhiyuan validates; AI Origin co-exists; Dazhongsi judges

The three types are not a repeatable set of AI rooms. Ordinary city always comes before specialist state.

FIG.03 / KEY AREAS

Three key areas: return technology to daily life

Not three AI rooms, but three ways of caring for an existing city.

One shared floor, three different spatial questions

STATUS × ACTION

- Participant judgment
1. Check that the ordinary route remains complete
 2. Without rights, access or safety evidence: NO-BUILD
 3. Every deep task keeps a human stop and paper/ordinary fallback
 4. No site, operator or approval is appointed here

Put “validation” inside a returnable chain of responsibility

FIG.05 / P0 S01 PARTICIPANT REFERENCE

Put “validation” through a returnable handoff chain first

12→3→9 protects ordinary city; S01 is a PARTICIPANT_REFERENCE only.

JZ100 A03 • 2026.08.31 • PARTICIPANT_REFERENCE

Handoff before action

S01 is a PARTICIPANT_REFERENCE for a future professional conversation, not a field task, selected site, construction drawing or approved pilot.

- carrier / rights: HOLD
 - roles / sign-off: UNCONFIRMED
 - field / engineering / capacity: HOLD
 - budget / procurement / funding: null or HOLD
- If a condition cannot be evidenced, pause, lower-tech or NO-BUILD.

Ten components; one handoff-ready starting packet

A reference framework for how a future team proves, stops and returns to ordinary city—not action already taken, authority already secured or implementation promised.

01 Carrier decision

Protect the ordinary route; absent rights, access or service evidence means reject or NO-BUILD.

02 S01 reference task

A concept packet for inputs, outputs, roles, stop and reset records.

03 RACI handoff

Role types and future sign-off classes only; no appointed organisation.

04 Hazard / lockout / NO-GO

Human stop, isolation, clearance, quarantine and reset; no engineering values asserted.

05 Cost boundary

Work packages, sensitivity and exclusions; not a BOQ, quote, budget or funding commitment.

06 Operations runbook

Preflight, open, monitor, pause, incident, isolate, reset and archive.

07 Layered acceptance

Participant-checkable now; professional, field and commissioning evidence remains future work.

08 Rights / authority

Identify, request, validate, expire, revoke and escalate; unresolved means stop.

09 Public context

Public sources give context only; never rights, operations, budget or approval.

10 Day 1 / Week 1

A future closure map, not a schedule or field report; roles and evidence remain unconfirmed.

P0 remains a concept starting point, not a permission

No action occurred. Real rights, operations, budget, field evidence, engineering, statutory/professional authority and approval are unconfirmed; each gap permits only HOLD, lower-tech or NO-BUILD.
