

ZHILINK CHAIN VALLEY - Element-Chain Belt

Official wings: Zhongguancun Tech-Service Wing / Xiaoyuehe Scenario Empowerment Wing.

PROVISIONAL / CONCEPT ONLY

Not an official redline, siting plan or approval conclusion.

1

Avenue / Zhongguancun Avenue

Element services move along a public-space sequence.

3

Three relays

ZC Transfer Post / ZC Capital Platform / ZC Talent Inn.

5

Five elements

Technology, capital, talent, data and standards.

6

AI+ scenario families

Industry, space, public service, culture, governance and transport.

Source: PACKAGE-GEOMETRY; mapping is a concept crosswalk.

Auditable interfaces

Xiaoyuehe route + Dazhongsi smart-native loop

Formal wings: Zhongguancun Tech-Service Wing / Xiaoyuehe Scenario Empowerment Wing. This package deepens the former; Xiaoyuehe appears only as a conceptual public-experience interface. East-west stitching is a cross-wing strategy, not a third wing.

Xiaoyuehe Scenario Empowerment Wing public-experience path (concept interface, not official route); entry notice point -> under-bridge shared living room
-> community service lookout. All are reversible concept spaces; exact siting must be checked against official boundary, ownership, slow-traffic and flood-control information.

Xiaoyuehe entry notice point | Relay Commute event shuttle | riverfront wayfinding node for commuters, visitors and residents; aggregate time-bucket counts and bookings only, no individual traces; street + operator, paper map, staffed wayfinding and manual shuttle phone; punctuality, complaints and human-takeover closure; remove digital recommendation after the participant gate.

Under-bridge shared living room | Origin Stage roadshow space | reversible event area for founders, public, families and nearby merchants; de-identified summaries and voluntary registration only, no face recognition or behavior profiles; relay + media, human host, paper registration, public-interest priority; sessions, participation and feedback closure; pause after two weak cycles or failed safety review.

Community service lookout | Silver Care community terminal | riverside service micro-node for elders, families and low-digital users; non-digital first, anonymous counts and satisfaction only; street + volunteers, home visit, paper form and staffed window; reach, satisfaction and response time; disable automated triage after complaint/privacy failure while retaining manual service.

Dazhongsi AI Industry Cluster smart-native consumer/business loop (concept): ZC Talent Inn is not only a talent-help desk; it is a service interface for talent entry -> trial experience -> demand matching -> repeat-use feedback. The space is a retrofitted industrial-street ground-floor shared service hall with demountable display cabinets, not official siting.

Talent Window provides human-first entry advice for international talent and engineers; Cloud Ladder turns de-identified product/service summaries into withdrawable pilot displays and small-business service booths; Chain Capital Lounge connects voluntary pilot demand to capital, procurement and technical-service partners after human review.

Responsibility sits with an industry operator, relay operator and industry association/compliance reviewer. Only de-identified briefs, bookings and aggregate feedback are allowed; no individual tracking or automated credit decision. Paper forms, staffed guidance and manual matching continue when digital tools are off.

Public value is a legible trial/service entry for international talent, start-ups and neighborhood merchants. Metrics are repeat-use intent, effective-match rate, complaint closure and human-review completion; two cycles below participant gates or compliance failure withdraws digital matching, retain offline service and publish the review.
