

The Slow Variables

京张慢变量 JINGZHANG · THE SLOW VARIABLES

How a city decides how fast AI may go

1909: the Jing-Zhang railway crossed Badaling on a switchback — steel learned to turn; today it teaches algorithms to wait.

A city runs on two clocks

AI updates quarterly · shade, soil and daily life take years · five slow variables gate expansion

FAST clock · 1 revolution = 1 quarter

SLOW clock · 1 revolution = 10 years

CONCEPT ONLY · PROVISIONAL BOUNDARY · FIELD CHECK PENDING · NOT A STATUTORY REDLINE
