

FIGURE 01 OVERALL URBAN STRUCTURE

Jing-Zhang Noonline SLA
43.6 km² research relation → c. 11.4 km² design area → three zones, two wings

V4 / CONCEPT

COORDINATED RELATION, NOT AN OFFICIAL REDLINE

Jing-Zhang c. 9 km linear corridor
Publicly supported strategic context
Not drawn as an exact boundary or existing track

PHYSICAL CONNECTION

INTELLIGENT CONNECTION | CONCEPT

RESILIENT CONNECTION | AI-OFF

EVIDENCE LANGUAGE

- Solid | publicly supported context
- - Coral dash | conceptual intervention
- - Grey dash | provisional relation
- Gold point | field verification required
- ☐ Purple hatch | professional study required

ZHONGGUANCUN SERVICE WING

professional services, translation and governance

does not duplicate the three prototypes

CONCEPT

XIAOYUE RIVER SCENARIO WING

ecology, daily scenarios and public feedback

requires ecology and engineering study

CONCEPT

REVERSIBLE RESEARCH-TO-CITY LOOP

Zhongzhiyuan | research and validation
AI Origin | explanation and feedback
Dazhongsi | use and daily observation
Governance | returns to iteration

Public sources support the corridor, scope hierarchy and three-zones-two-wings strategy; routes and nodes remain conceptual with field-verification gates.

FIGURE 02 ZHONGZHIYUAN | VALIDATION INTERFACE

Research → Prototype → Test → Validate
No.106, F01 and F020-240/250/260/270 | conceptual spatial station

V4 / CONCEPT

RESEARCH-TEST INTERFACE: PUBLIC ROUTE PRECEDES ACTIVATION

Test zone, buffer, public edge and human verification are conceptual spatial moves requiring permits, field verification and professional safety study.

FIGURE 03 AI ORIGIN | CIVIC KNOWLEDGE ROOM

Understand → Question → Co-create
No.106, F020/21 and F020-240/250/260/270 | conceptual civic space

V4 / CONCEPT

CIVIC KNOWLEDGE ROOM: CHOICE PRECEDES INTERFACE

N06 is a heritage interpretation point, not an existing relic; entry, staying, lateral links and service periods require field or responsible-party verification.

SECTION-03 | KNOWLEDGE, STAYING, CHOICE

RELATIVE SPATIAL RELATION, NOT EXISTING CONDITION OR BUILD DETAIL

FIGURE 04 DAZHONGSI | CONCEPT STATION-ARRIVAL INTERFACE

Arrive → Decide → Pause → Enter Daily Life
No.106, F020, F020/21 and F020-240/250/260/270 | regularly covered from verified station context

V4 / CONCEPT

RAIL-TO-CITY: THE FIRST MINUTE AFTER ARRIVAL MUST BE READABLE, STAYABLE, HELPABLE

Verified context is limited to Dazhongsi Station and published in-station service information; external links, crossings, access and frontage remain concept / pending verification.

SECTION-04 | RAIL-TO-MARKET TRANSITION

CONCEPT ARRIVAL INTERFACE, NOT AN APPROVED STATION-CITY PROJECT

FIGURE 05 SECTION-01-04 | SPACE BEFORE AI

Four relative transverse relationships
No invented dimensions; every physical condition is expressed by its evidence level

FIGURE 06 AI-ON / AI-OFF | URBAN RESILIENCE

Physical space → human responsibility → digital service → AI assistance
When AI withdraws, fixed space and human responsibility retain minimum public service

AI ENHANCES THE CITY. THE CITY MUST STILL WORK WHEN AI DOES NOT.

From AI on to off, service degrades through evidence and responsibility rather than pretending to remain complete.

The AI-OFF result is a pass for the concept physical network, still limited by field verification of facilities, entry, crossings and duty periods.

FIGURE 07 RESEARCH → CITY → FEEDBACK → ITERATE

A spatial loop from research and validation to public feedback
Every step has space, human responsibility and failure triggers; innovation does not end at display.

FIGURE 08 IMPLEMENTATION CONTROL

V4.1 delivery logic: risk, space and action are reversible, stoppable and human-verifiable

V4.1 / CONCEPT

RB-1 verification / governance RB-2 reversible public interface RB-3 professional + regulated interface

Level 2 Jing-Zhang connector: recognition + heritage sequence; no <=400m SLA claim

04

6 WORK PACKAGES / spatial object, proposed accountable role and failure response

ROLE-01 pilot coordinator | ROLE-02 field verification | ROLE-03 public realm/accessibility | ROLE-04 O&M | ROLE-05 site/station interface | ROLE-06 AI/privacy

All roles are proposed and not appointed; RBs are non-financial resource bands. Provisional boundary, routes, nodes and service conditions are not official boundary, approval, existing condition or field verification.
