

JINGZHANG OPEN PLATFORMS

Everyday public AI interfaces along the completed
nine-kilometre park

PASS / STAY / GET THINGS DONE

Plan-section prototypes for three key areas

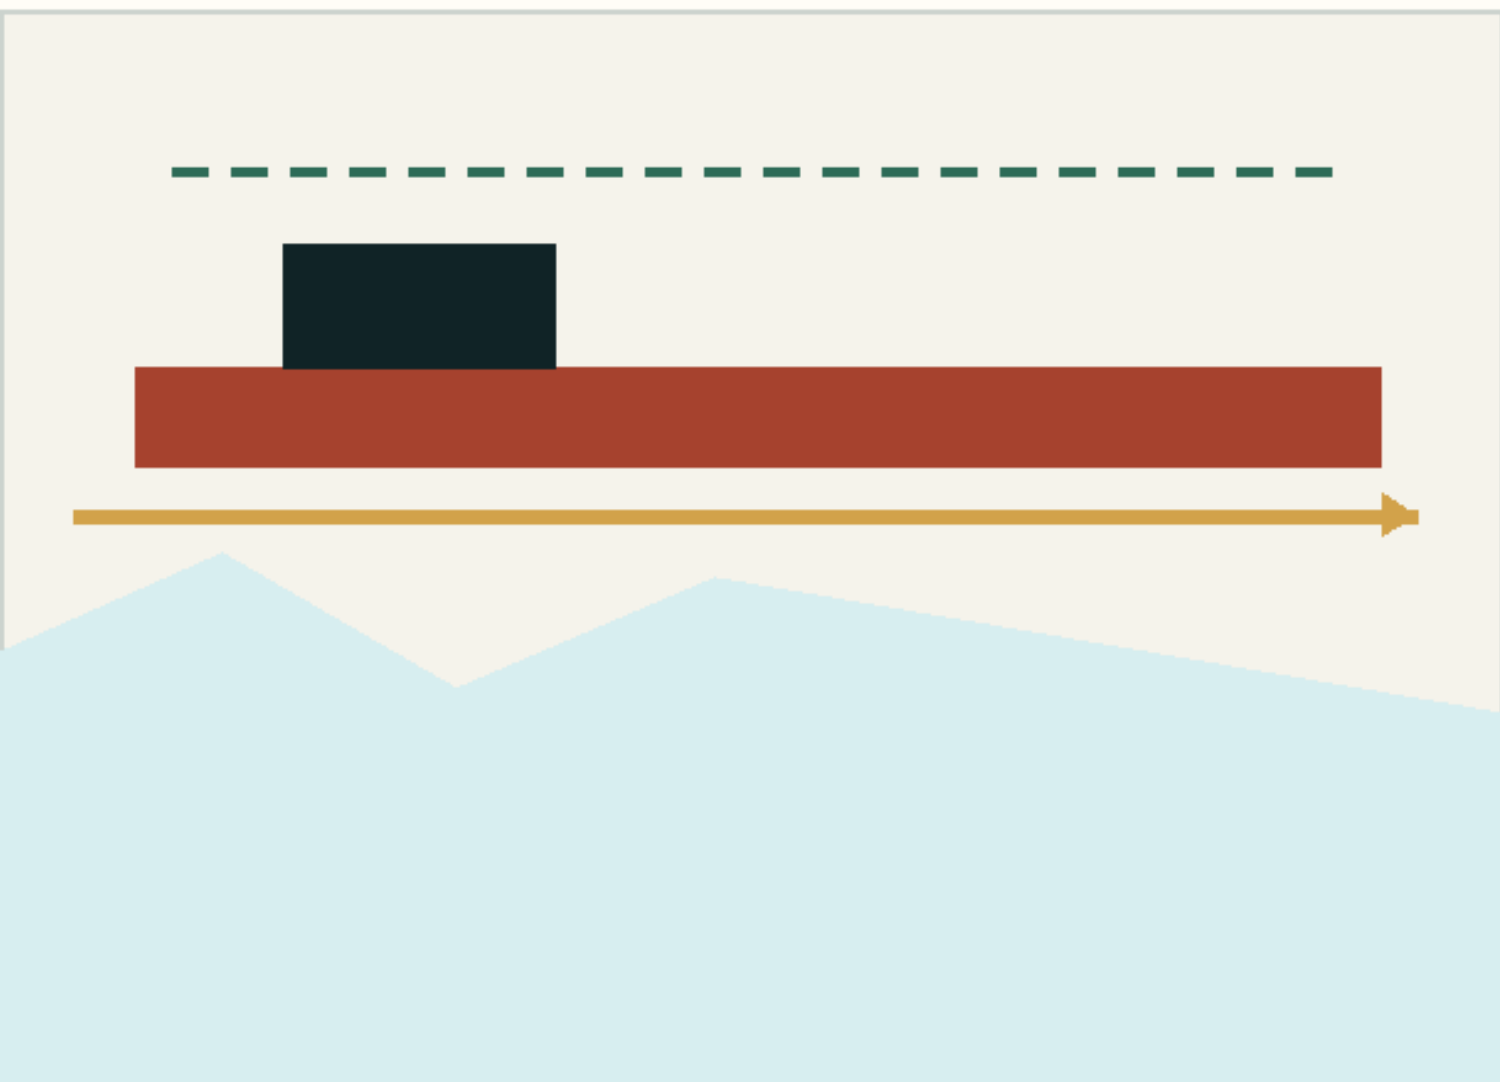

Concept-level representation. Provisional geometry records relative sequence only; recalculate after official GIS and field verification.

OPEN PLATFORMS / 03

Three key areas: plan, section and first-evidence prototypes

Visible components, accessible entrances, staffed counters and stop gates define each handoff to professionals.

N / ZHONGZHIYUAN RESPONSIBLE TEST VERANDA

PLAN / CONCEPT

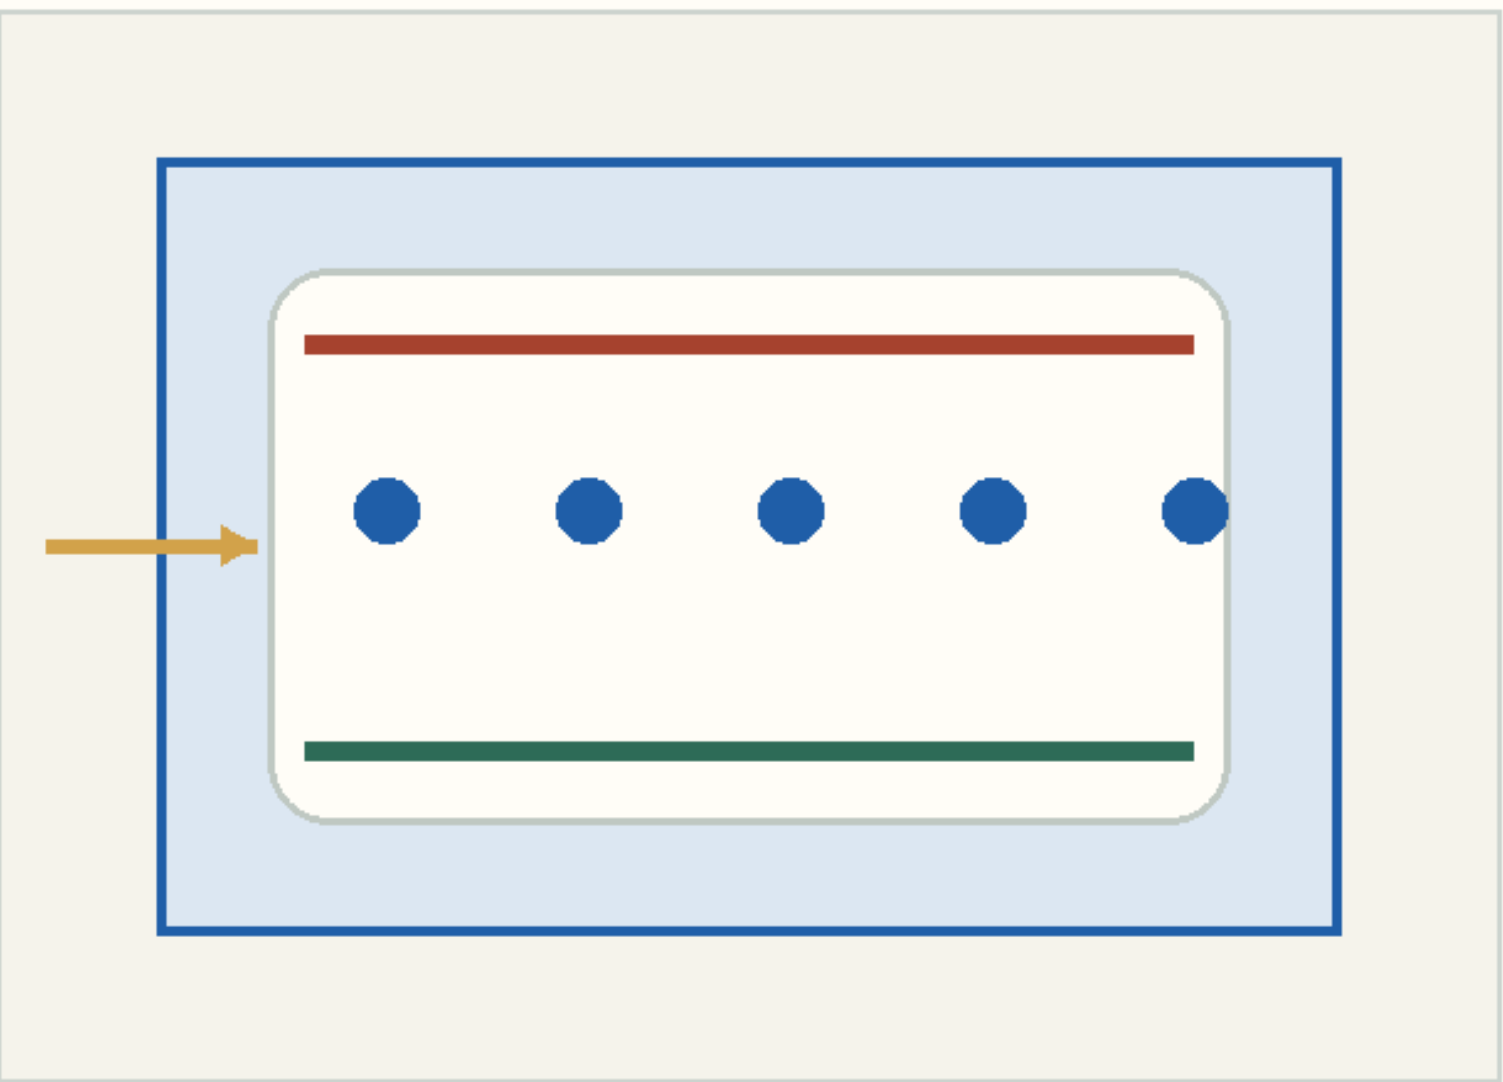

SECTION / REVERSIBLE KIT

eco-buffer / footway / duty counter / offline service

first evidence: duty ledger + waterside safety review

stop: no owner / ecology or safety risk

M / AI ORIGIN QUIET TRANSLATION COURT

PLAN / CONCEPT

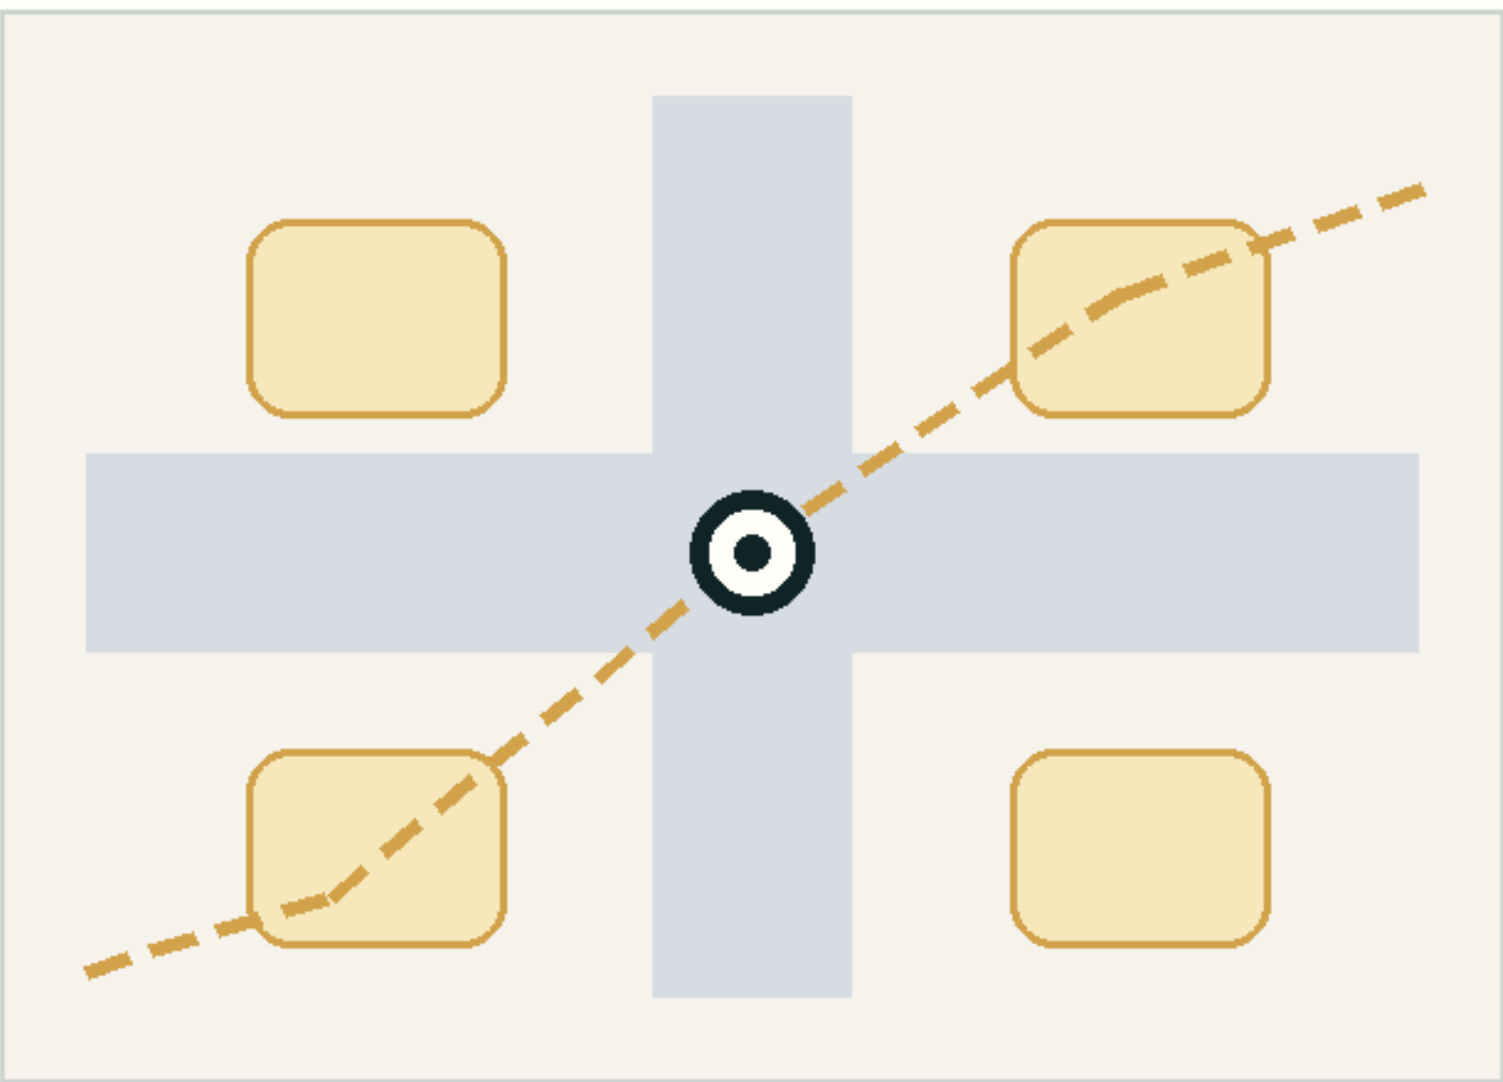

SECTION / REVERSIBLE KIT

heritage line / quiet edge / translation table / multi-channel explanation

first evidence: device-content-rights conflict map

stop: uncleared rights / no human explanation / disturbance

S / DAZHONGSI FOUR-QUADRANT REPAIR DECK

PLAN / CONCEPT

SECTION / REVERSIBLE KIT

four routes / repair porch / physical ticket / rest point

first evidence: 30-minute role-task matrix

stop: unsafe route / unclear tenure / no offline route

All spatial positions are relative concept indexes only: not official redlines, engineering alignments, approvals, or funding commitments.

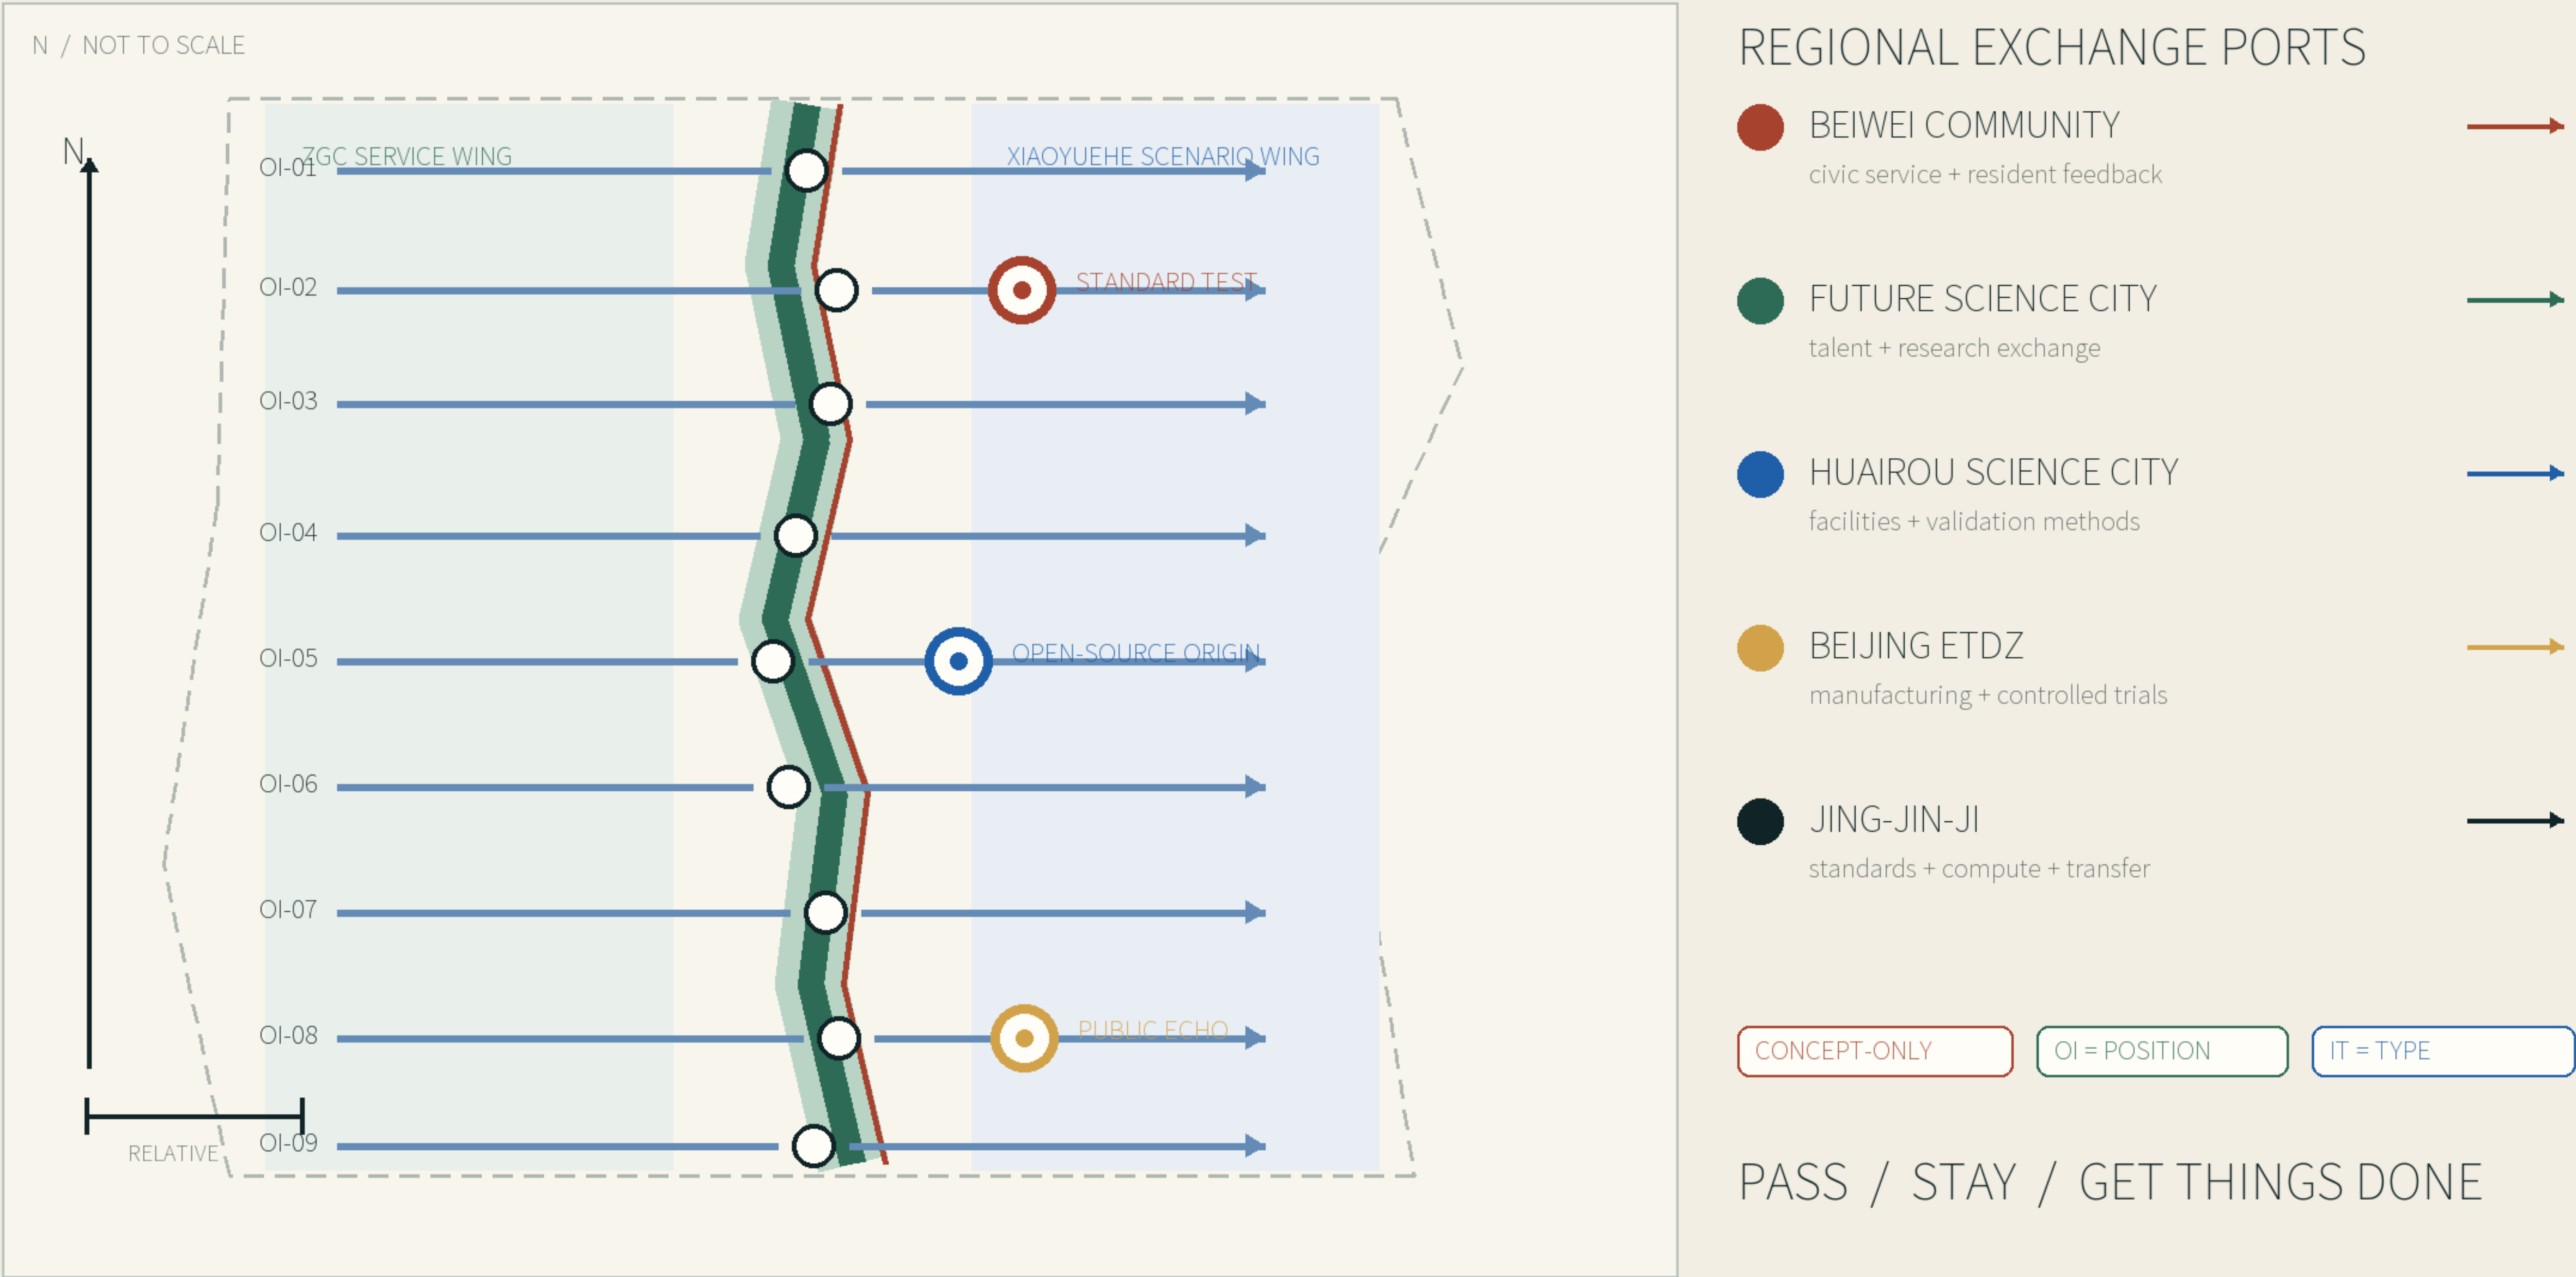

One park, nine openings and regional exchange

Concept-level representation. Provisional geometry records relative sequence only; recalculate after official GIS and field verification.

OPEN PLATFORMS / 01

One park, nine openings: turn a heritage spine into everyday city

A basemap-free relative masterplan: three stations, nine interfaces, two wings and five regional exchange links.

All spatial positions are relative concept indexes only: not official redlines, engineering alignments, approvals, or funding commitments.

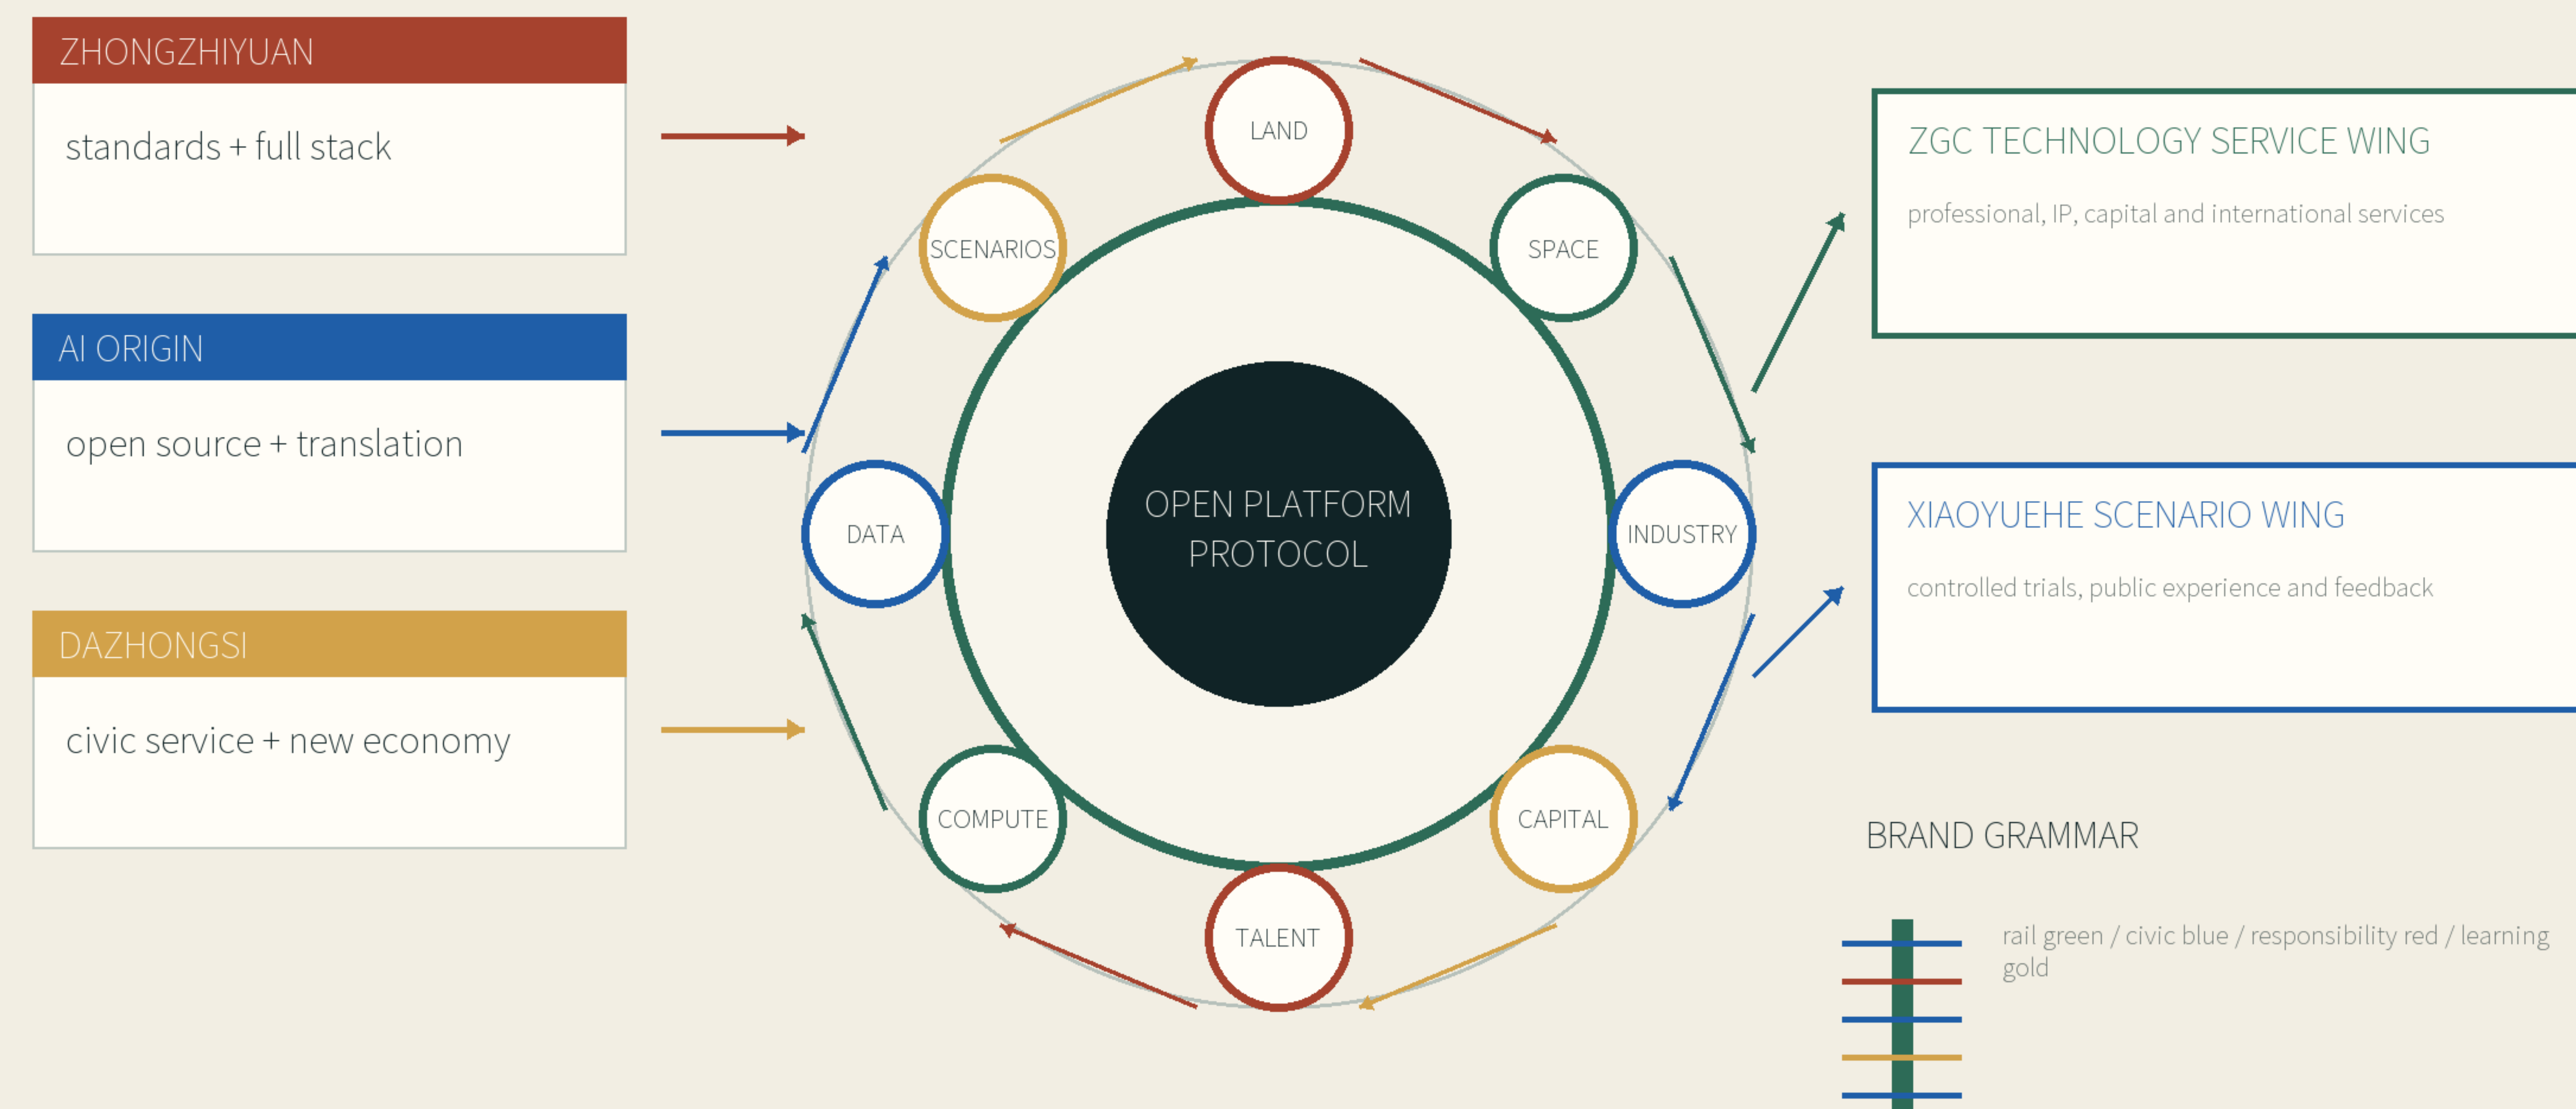

Three areas, two wings and an eight-resource ecosystem

Concept-level representation. Provisional geometry records relative sequence only; recalculate after official GIS and field verification.

OPEN PLATFORMS / 02

Three areas, two wings, eight resources in one open ecosystem

Traceable service contracts connect land, space, industry, capital, talent, compute, data and scenarios without promises of investment.

All spatial positions are relative concept indexes only: not official redlines, engineering alignments, approvals, or funding commitments.

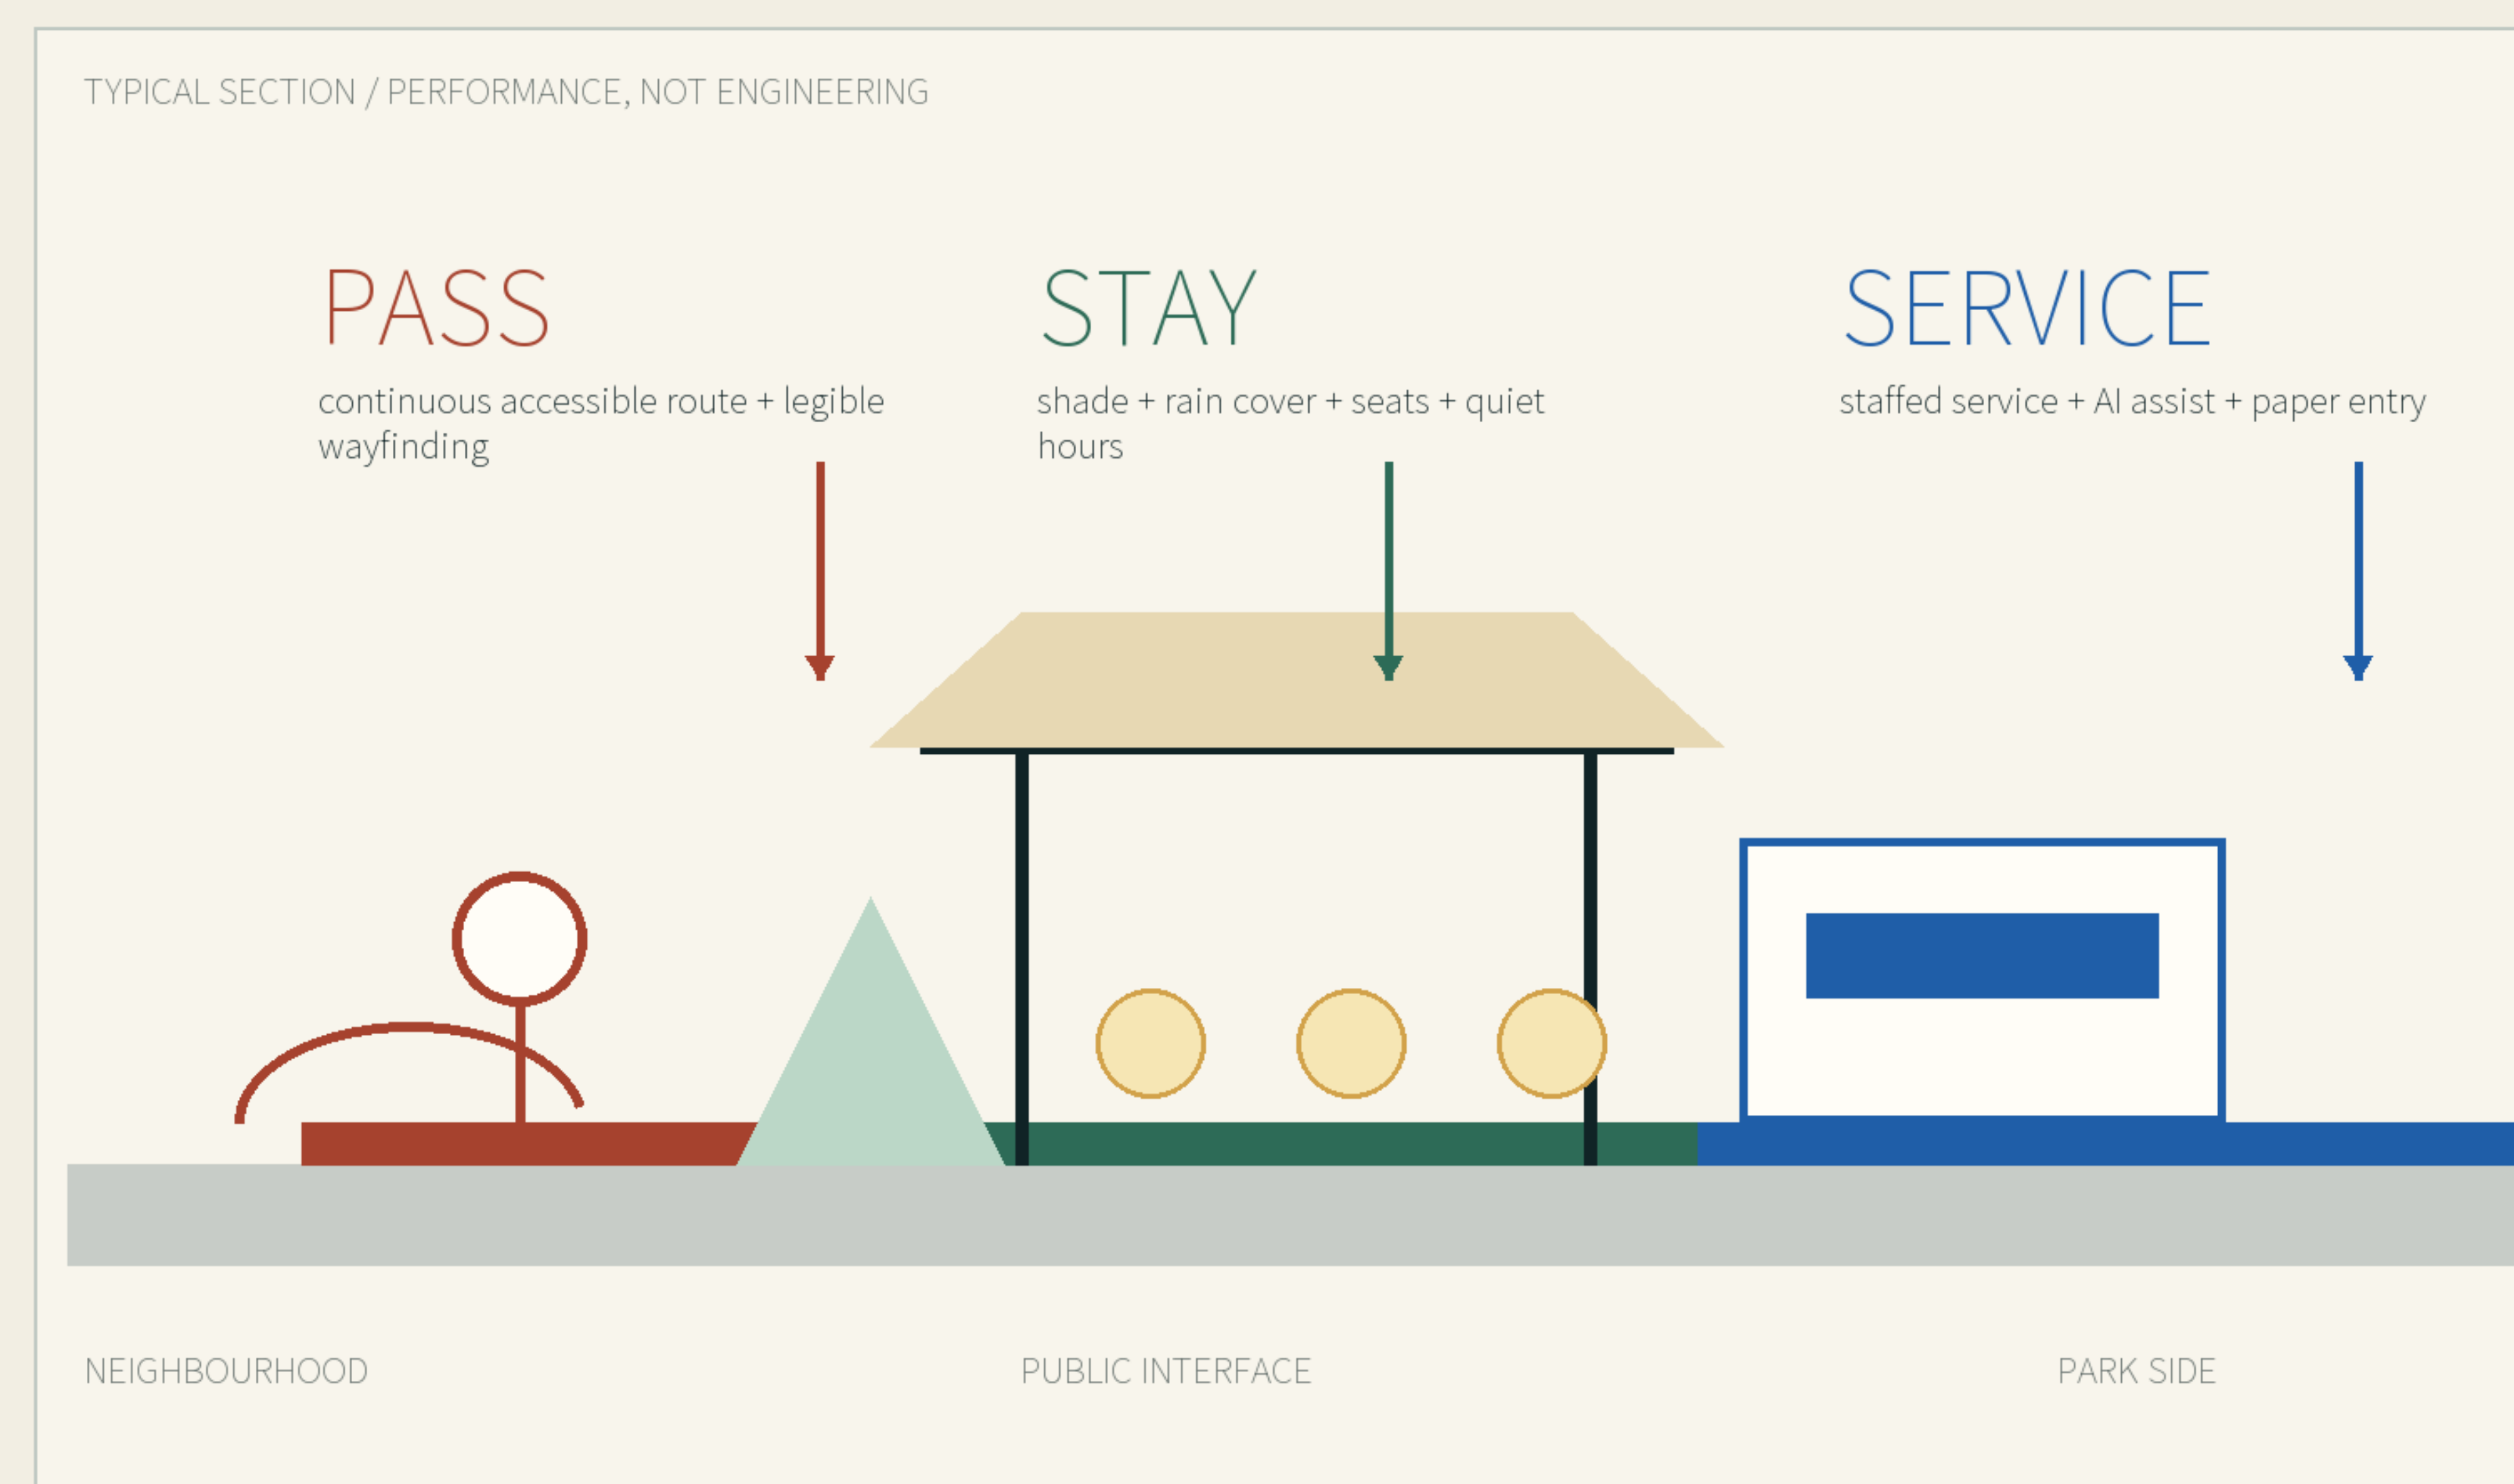

Typical transverse public-interface section

Concept-level representation. Provisional geometry records relative sequence only; recalculate after official GIS and field verification.

OPEN PLATFORMS / 04

One transverse interface combines passage, stay and service

The typical section defines performance layers and duty points; dimensions, levels, materials and structure await survey.

THREE OPERATING MODES

- HEAT**
shade, water, human patrol
- RAIN**
cover, flood warning, safe detour
- OFFLINE**
no login, no face, human appeal

500 m = candidate screen, not field measurement

All spatial positions are relative concept indexes only: not official redlines, engineering alignments, approvals, or funding commitments.

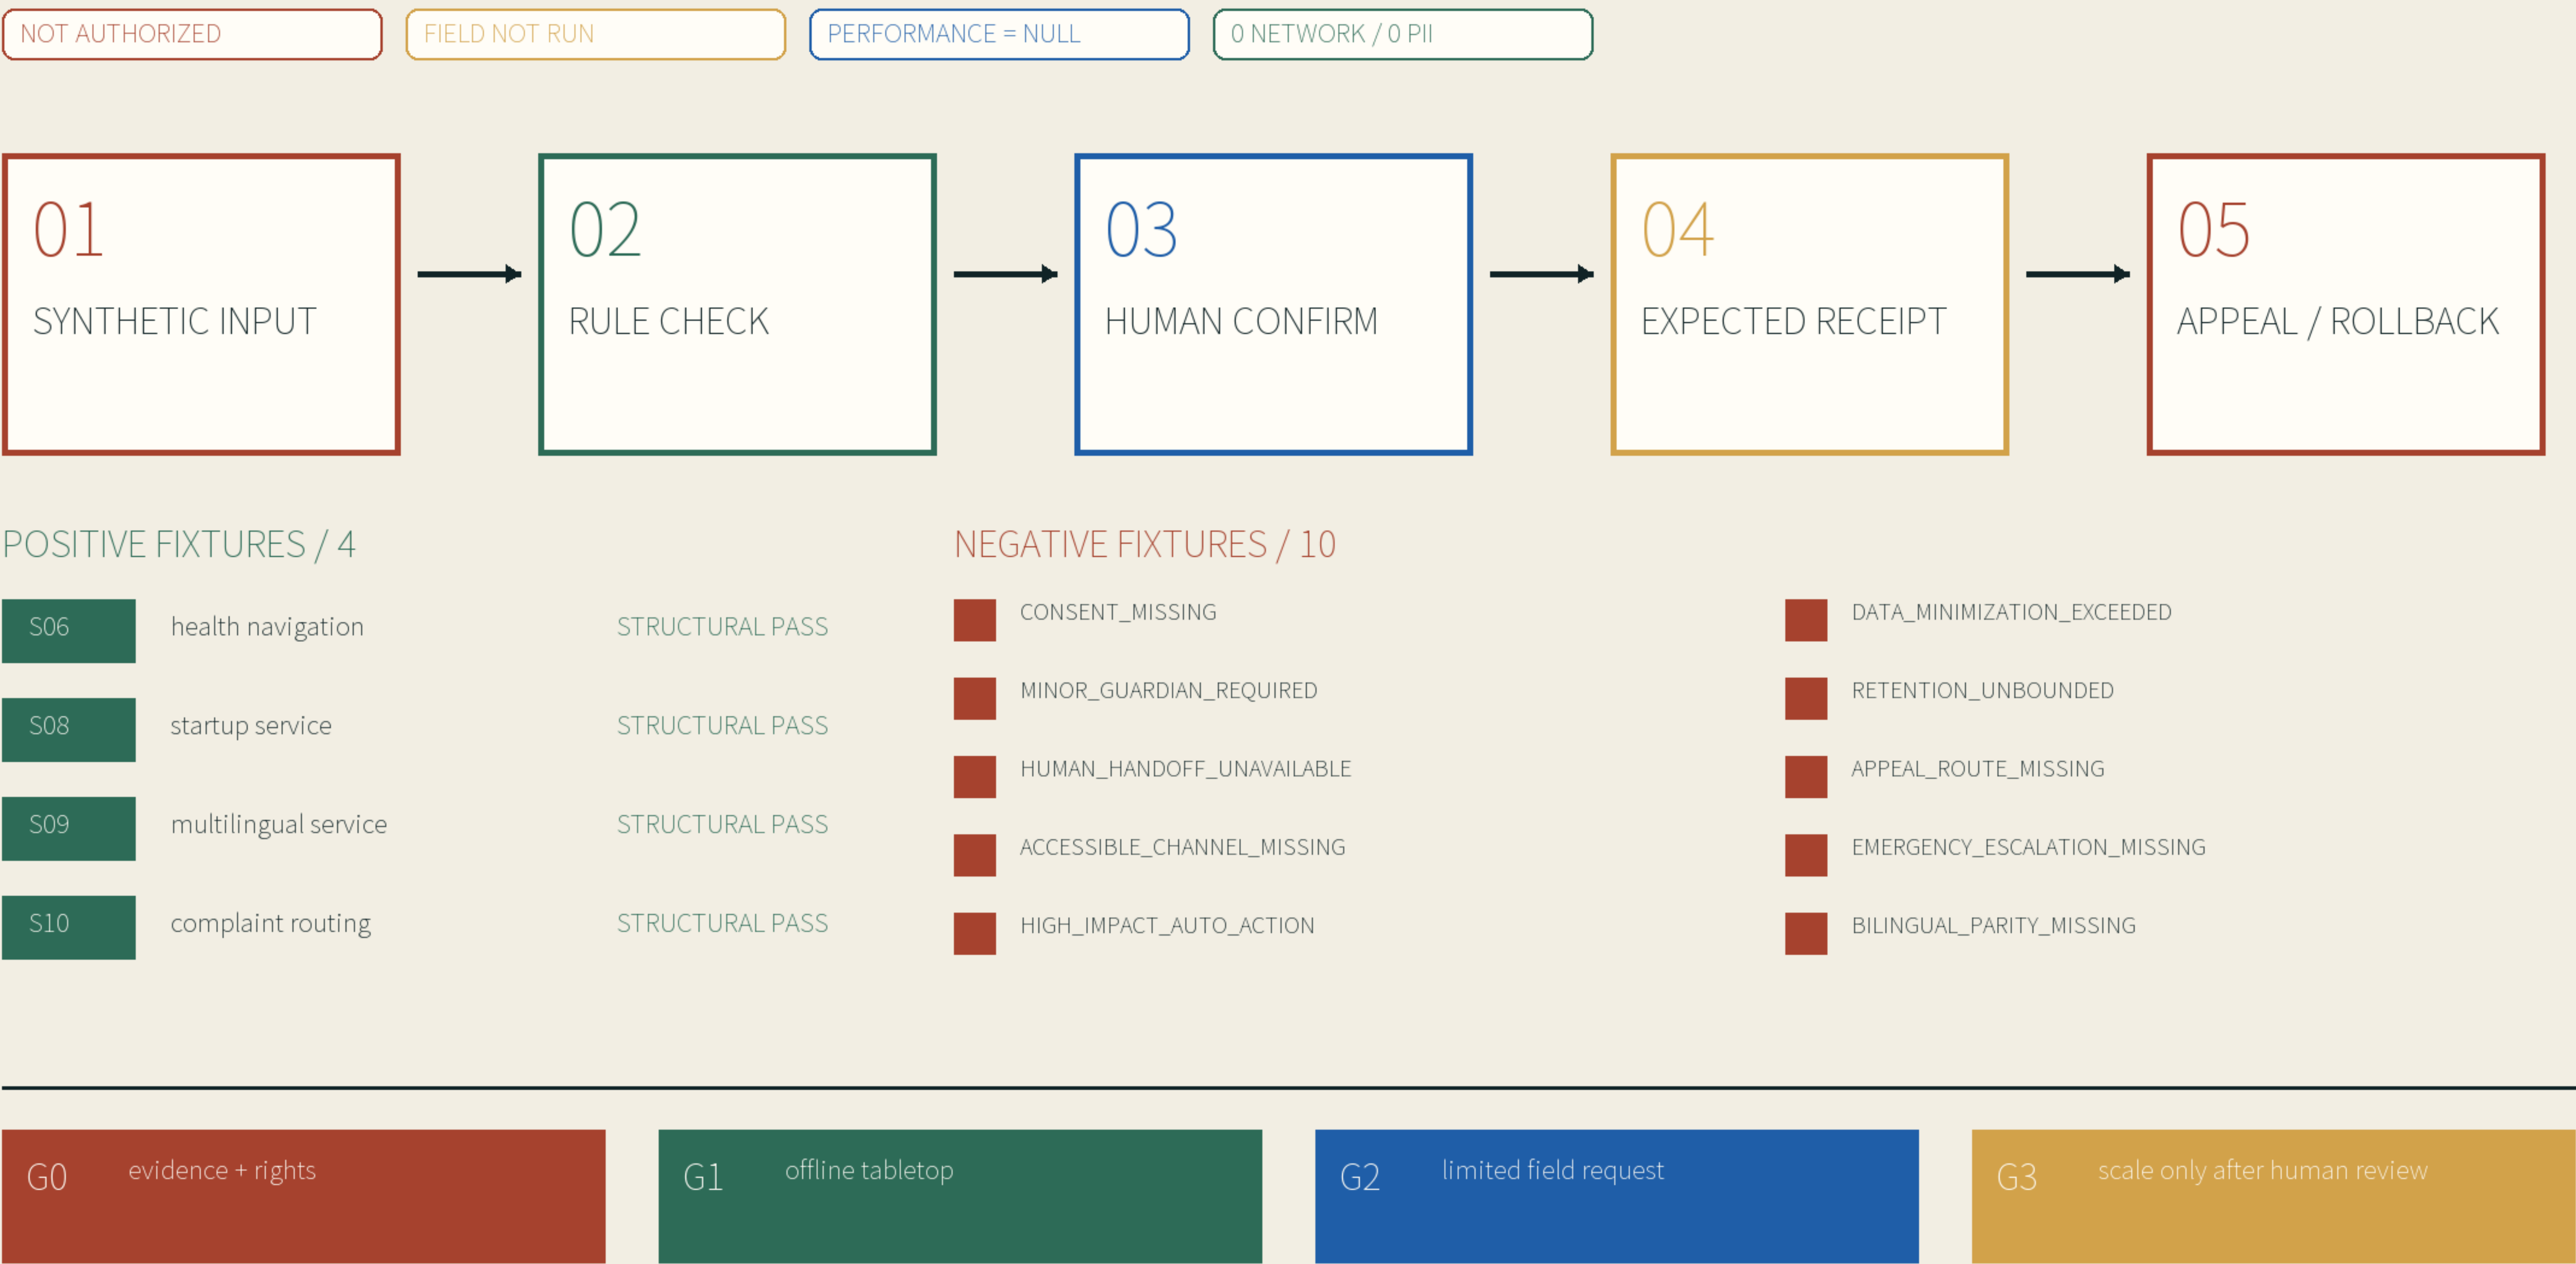

T1 civic-service offline tabletop

Concept-level representation. Provisional geometry records relative sequence only; recalculate after official GIS and field verification.

OPEN PLATFORMS / 05

T1 civic-service pilot: prove it can stop with synthetic cases first

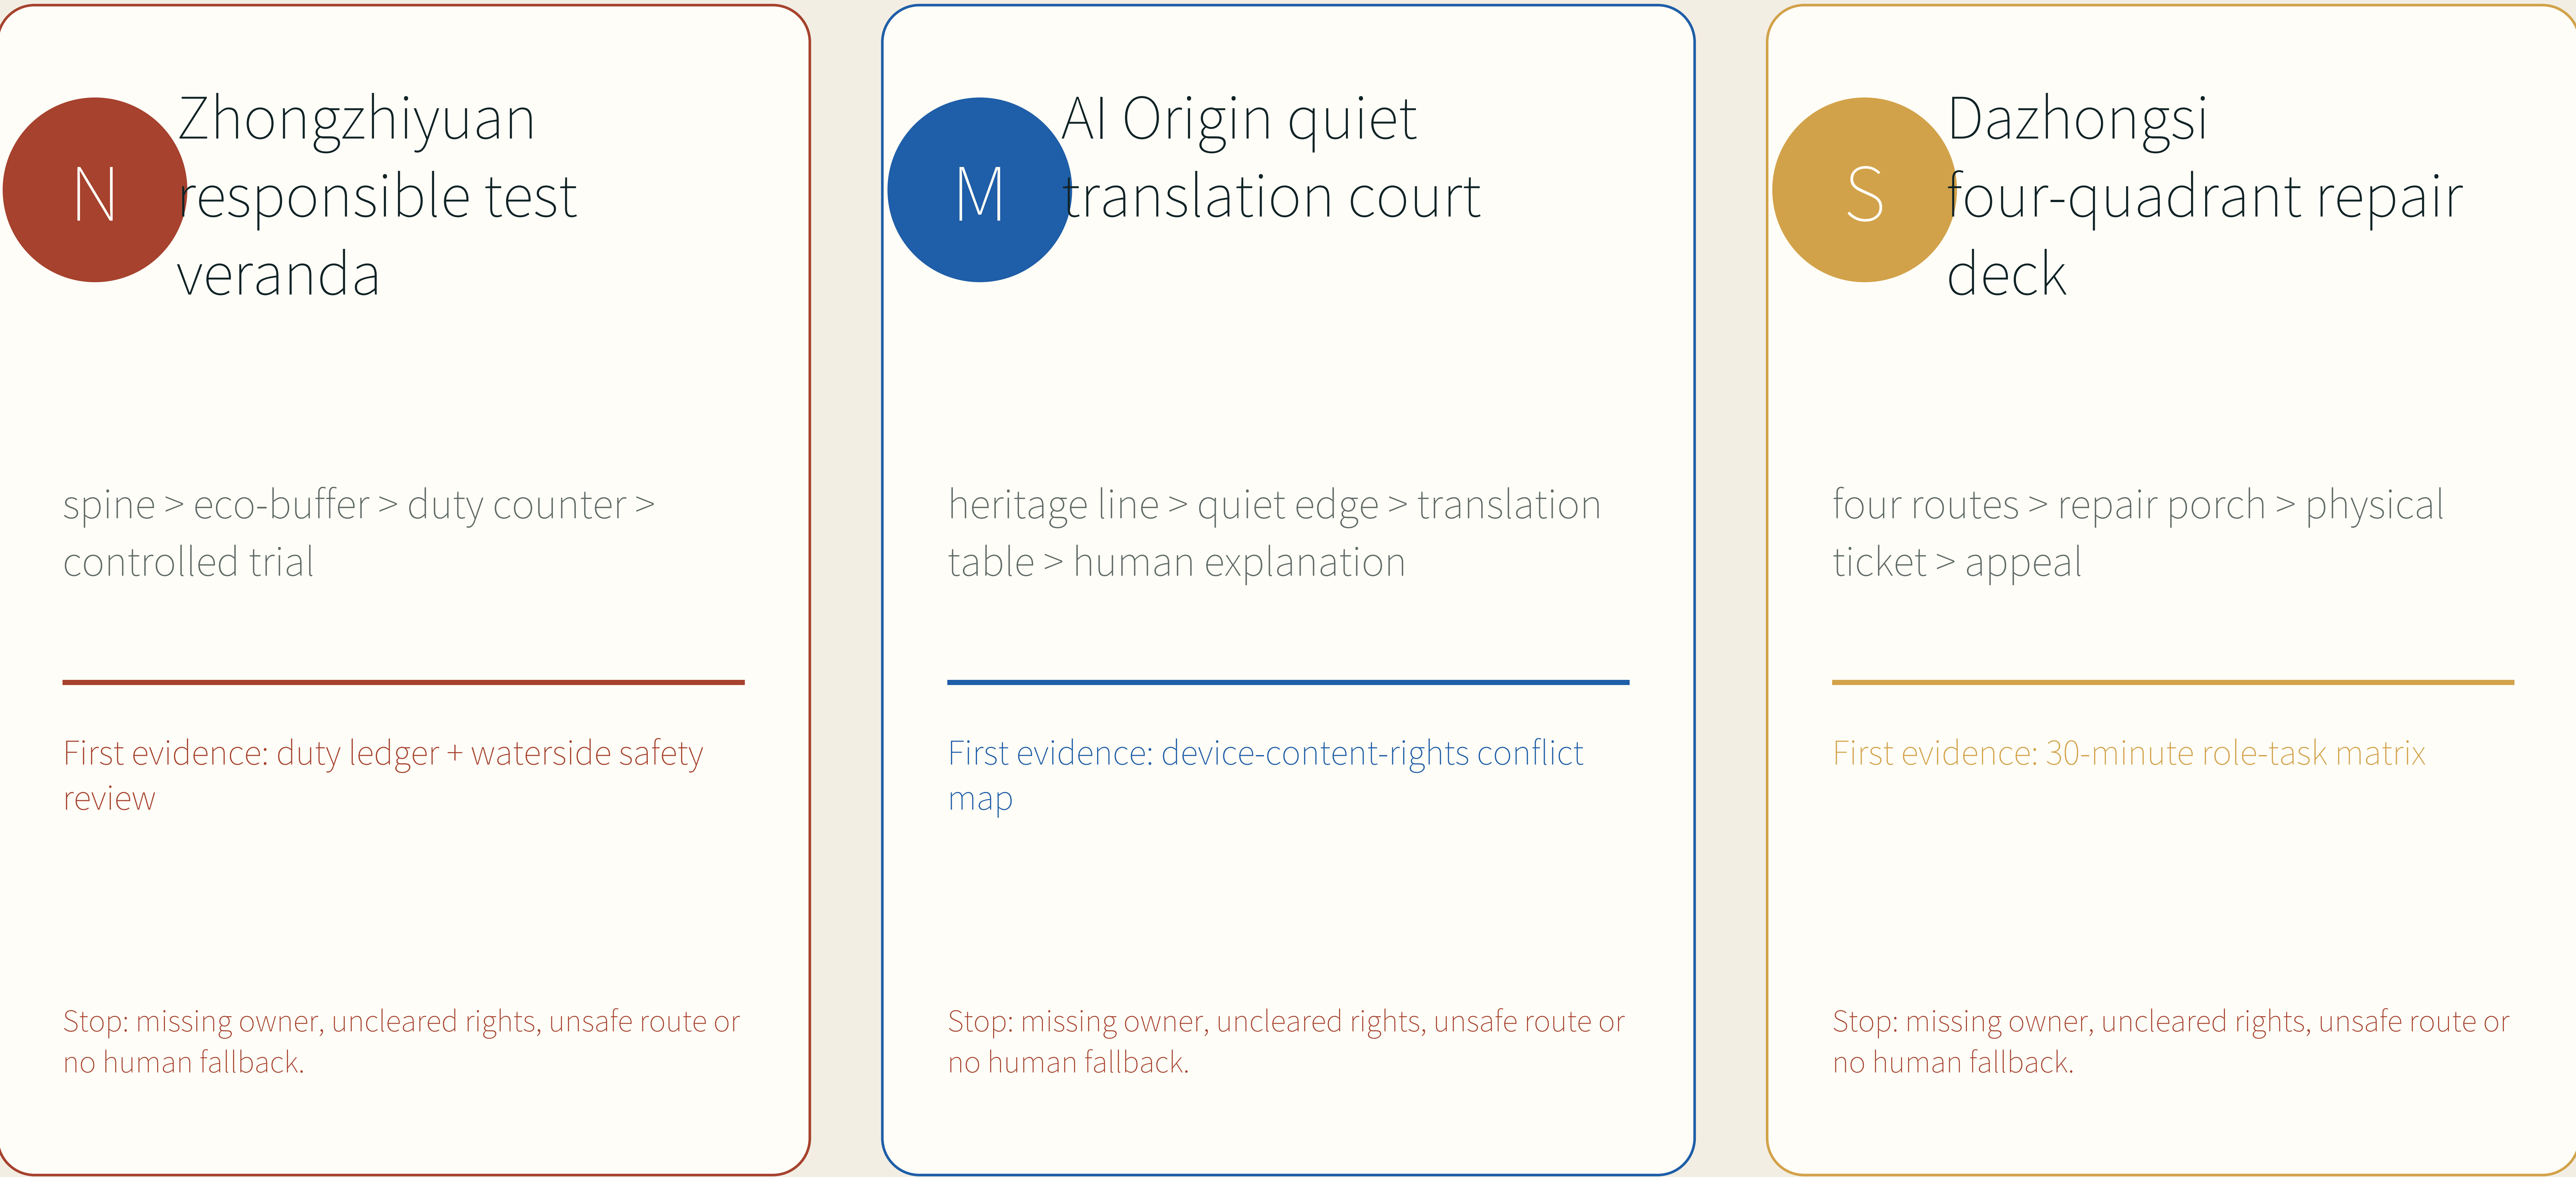

The offline tabletop checks positive and negative fixtures, human entry, rights, permits, budget, rollback and bilingual structure; it creates no field performance.

All spatial positions are relative concept indexes only: not official redlines, engineering alignments, approvals, or funding commitments.

Professional handoff contract for three key areas

A location advances only when accountable roles, first evidence, stop conditions and restoration are complete together.

THE OPEN PLATFORM PROTOCOL

DISCOVER -> TRY -> AUDIT -> STOP -> RESTORE

Place public interest, accessibility, human fallback and the right to exit before every AI scenario. T1 is an offline synthetic tabletop only: not authorized, not run in the field, with real performance kept null.
