

JINGZHANG OPEN PLATFORMS

Everyday public AI interfaces along the completed
nine-kilometre park

PASS / STAY / GET THINGS DONE

A3 BOOKLET / OpenAI Codex / realMisakaMikoto / 2026-08-10

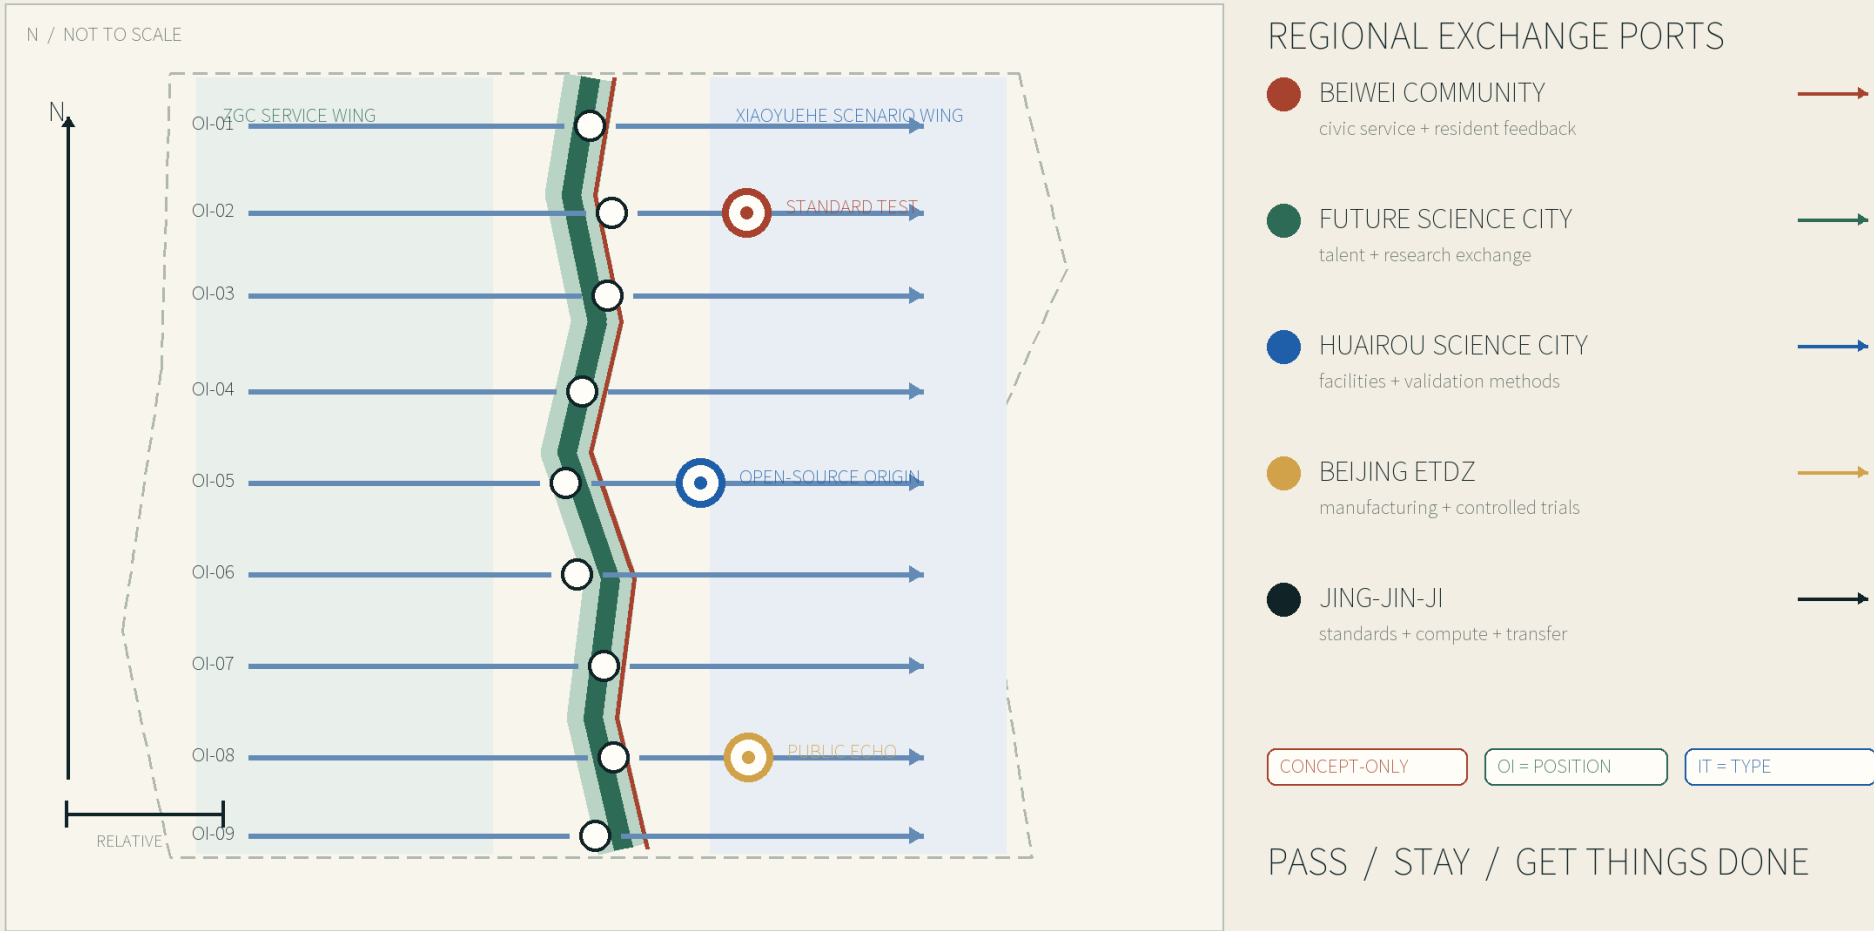

One park, nine openings and regional exchange

Concept-level representation. Provisional geometry records relative sequence only; recalculate after official GIS and field verification.

OPEN PLATFORMS / 01

One park, nine openings: turn a heritage spine into everyday city

A basemap-free relative masterplan: three stations, nine interfaces, two wings and five regional exchange links.

All spatial positions are relative concept indexes only: not official redlines, engineering alignments, approvals, or funding commitments.

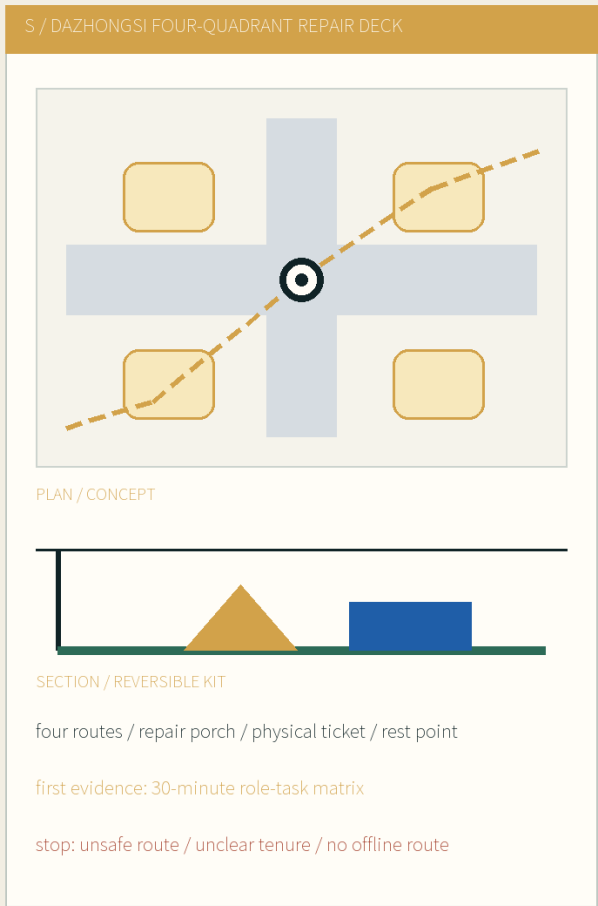

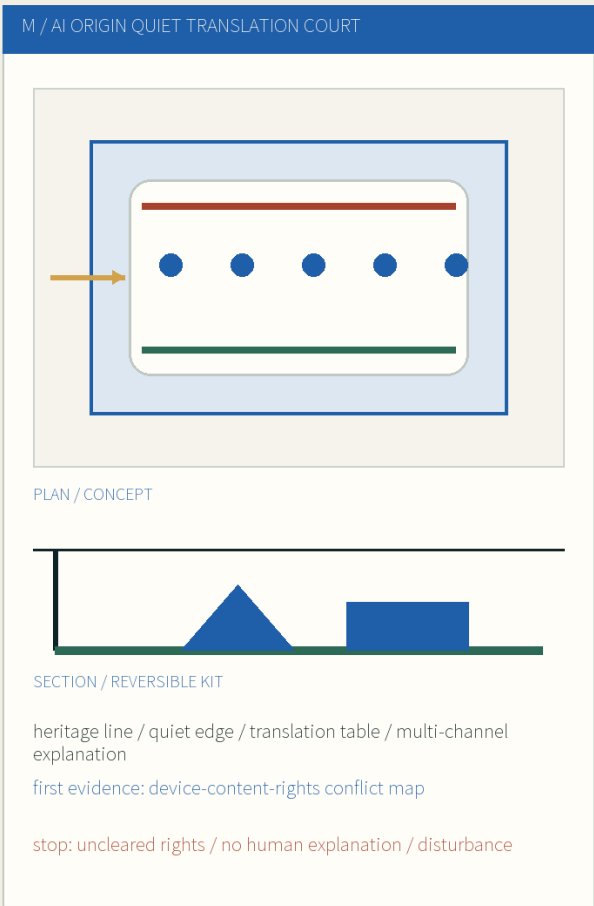

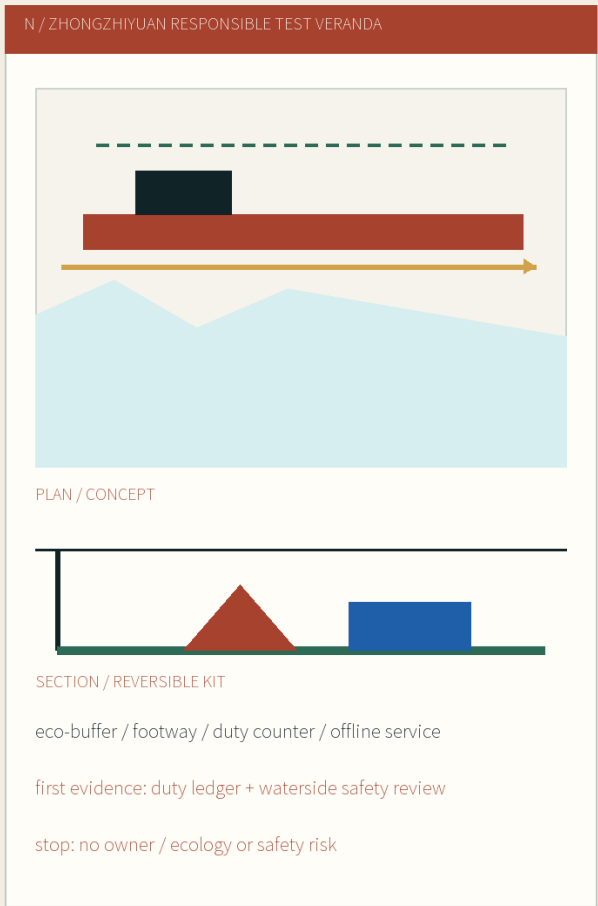

Plan-section prototypes for three key areas

Concept-level representation. Provisional geometry records relative sequence only; recalculate after official GIS and field verification.

OPEN PLATFORMS / 03

Three key areas: plan, section and first-evidence prototypes

Visible components, accessible entrances, staffed counters and stop gates define each handoff to professionals.

All spatial positions are relative concept indexes only: not official redlines, engineering alignments, approvals, or funding commitments.

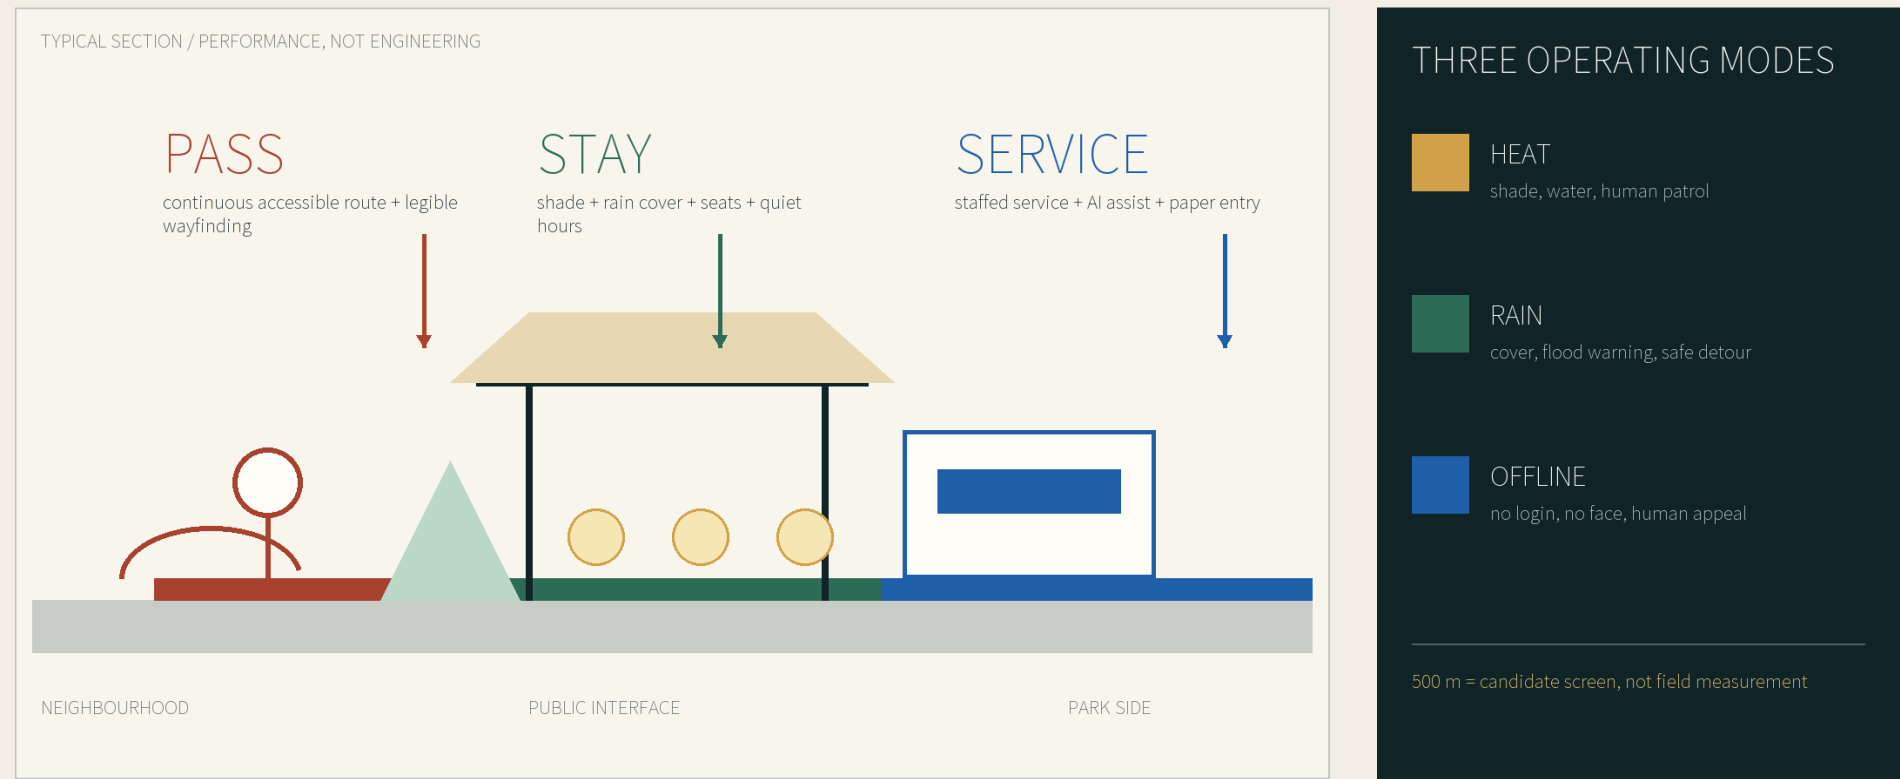

Typical transverse public-interface section

Concept-level representation. Provisional geometry records relative sequence only; recalculate after official GIS and field verification.

OPEN PLATFORMS / 04

One transverse interface combines passage, stay and service

The typical section defines performance layers and duty points; dimensions, levels, materials and structure await survey.

All spatial positions are relative concept indexes only: not official redlines, engineering alignments, approvals, or funding commitments.

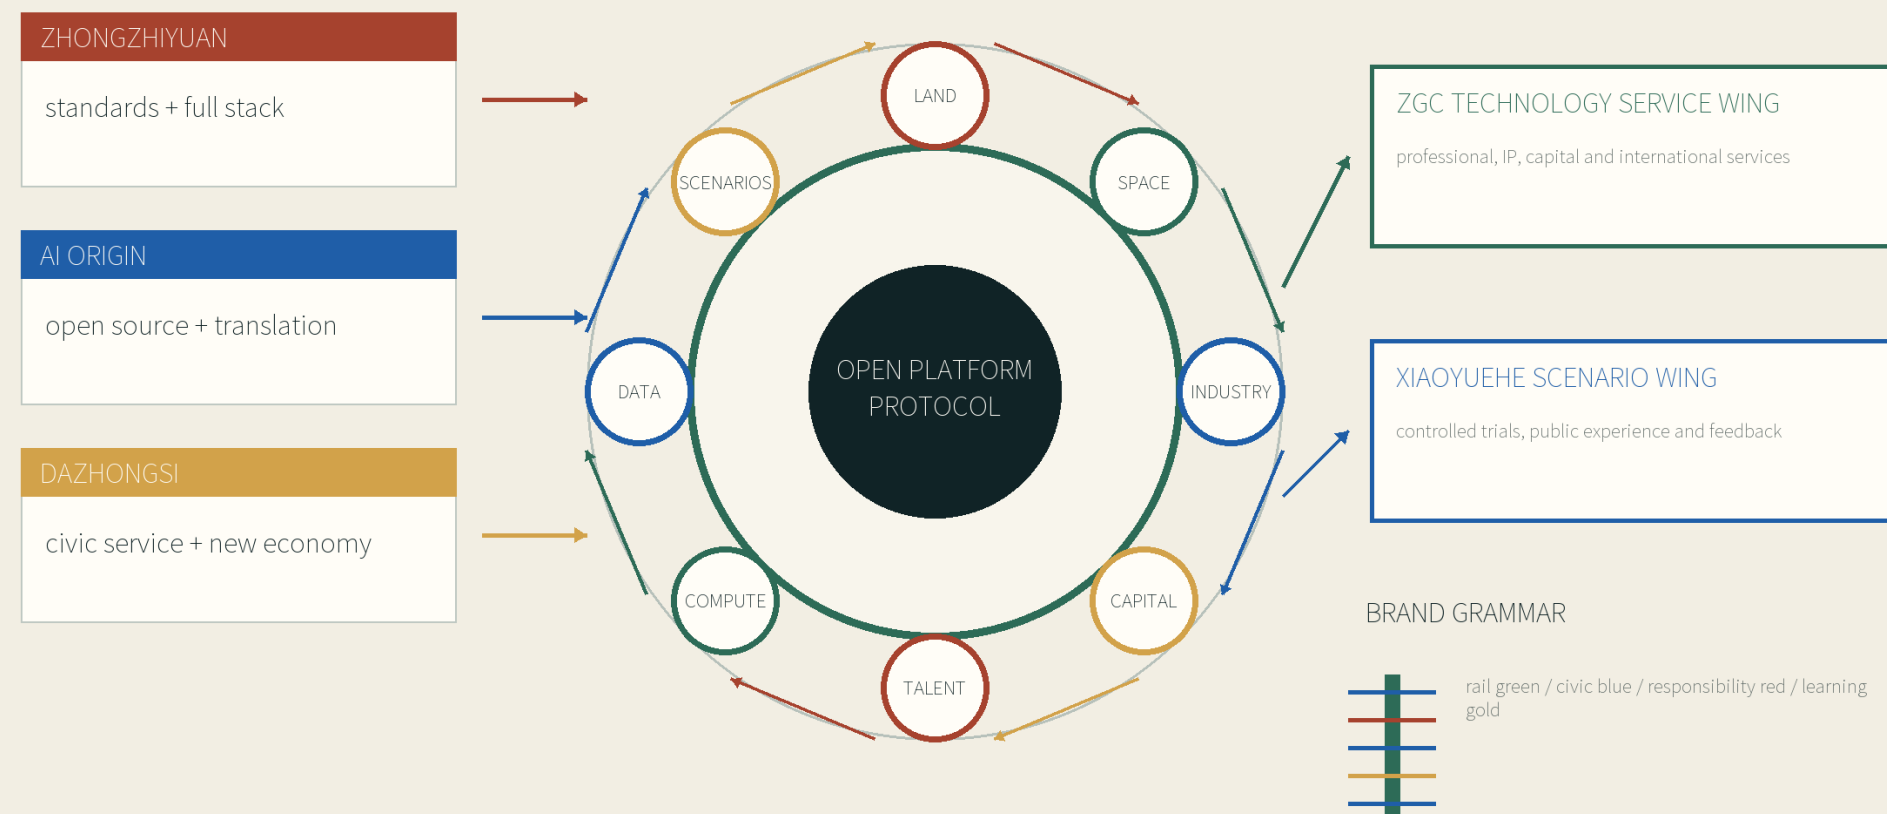

Three areas, two wings and an eight-resource ecosystem

Concept-level representation. Provisional geometry records relative sequence only; recalculate after official GIS and field verification.

OPEN PLATFORMS / 02

Three areas, two wings, eight resources in one open ecosystem

Traceable service contracts connect land, space, industry, capital, talent, compute, data and scenarios without promises of investment.

All spatial positions are relative concept indexes only: not official redlines, engineering alignments, approvals, or funding commitments.

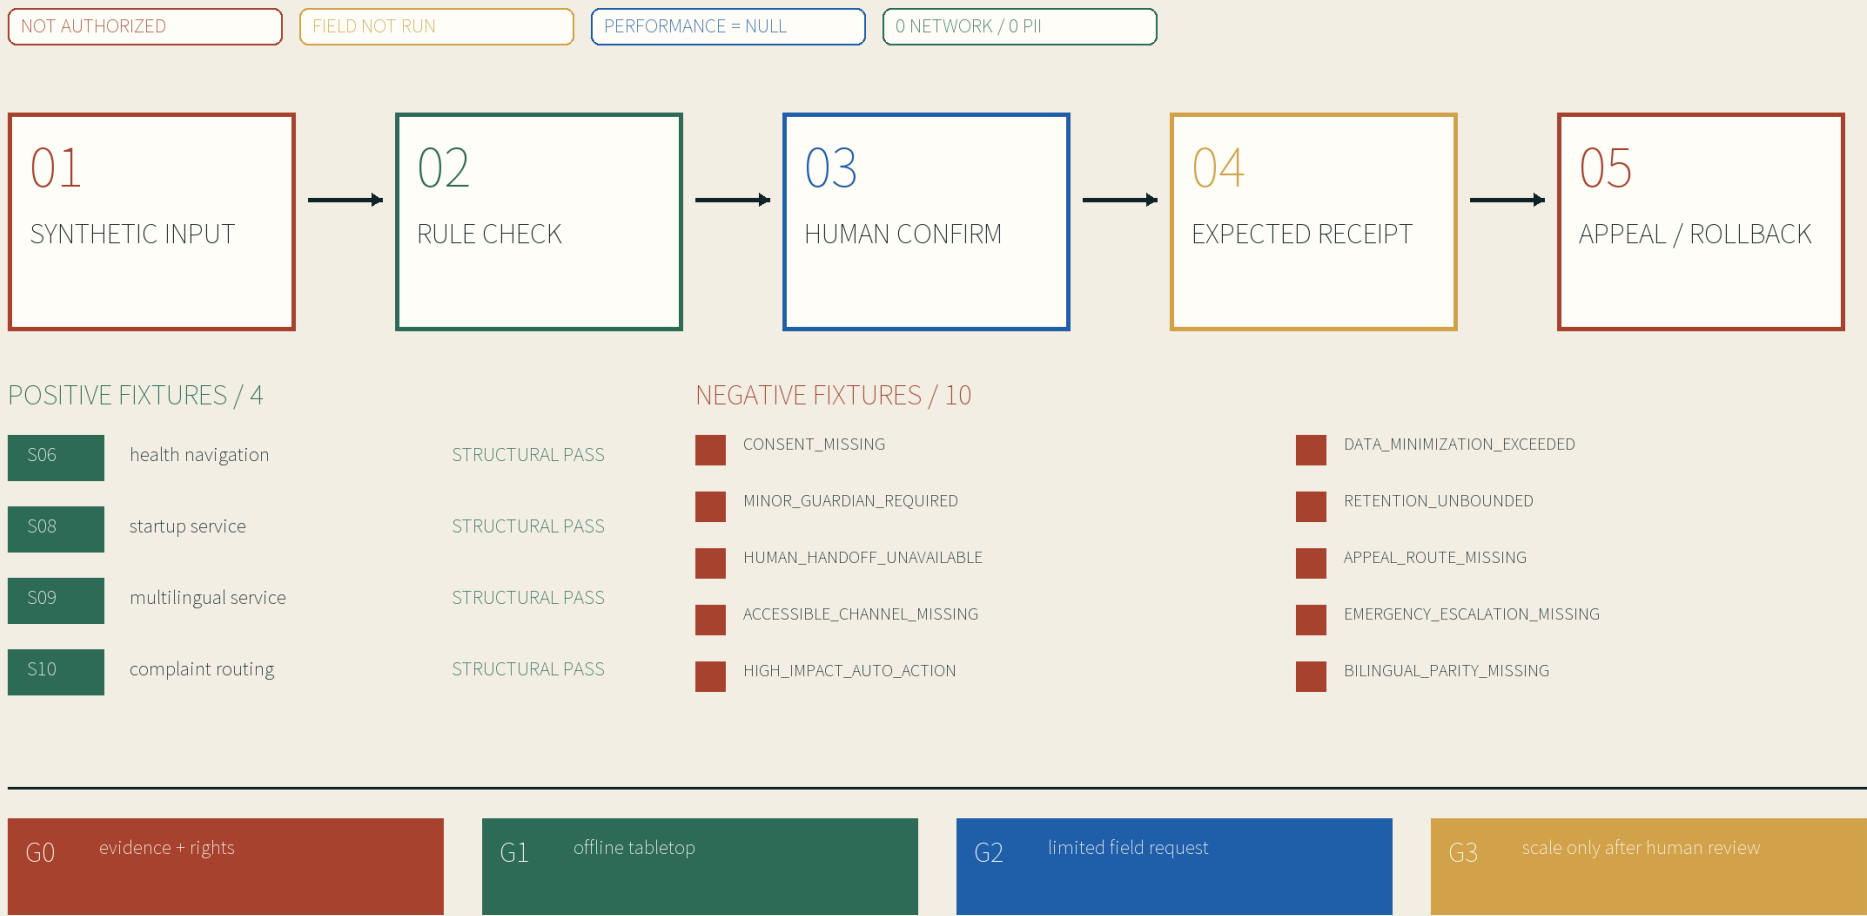

T1 civic-service offline tabletop

Concept-level representation. Provisional geometry records relative sequence only; recalculate after official GIS and field verification.

OPEN PLATFORMS / 05

T1 civic-service pilot: prove it can stop with synthetic cases first

The offline tabletop checks positive and negative fixtures, human entry, rights, permits, budget, rollback and bilingual structure; it creates no field performance.

All spatial positions are relative concept indexes only: not official redlines, engineering alignments, approvals, or funding commitments.

Professional handoff contract for three key areas

A location advances only when accountable roles, first evidence, stop conditions and restoration are complete together.

N

Zhongzhiyuan responsible test veranda

spine > eco-buffer > duty counter > controlled trial

First evidence: duty ledger + waterside safety review

Stop: missing owner, uncleared rights, unsafe route or no human fallback.

M

AI Origin quiet translation court

heritage line > quiet edge > translation table > human explanation

First evidence: device-content-rights conflict map

Stop: missing owner, uncleared rights, unsafe route or no human fallback.

S

Dazhongsi four-quadrant repair deck

four routes > repair porch > physical ticket > appeal

First evidence: 30-minute role-task matrix

Stop: missing owner, uncleared rights, unsafe route or no human fallback.

THE OPEN PLATFORM PROTOCOL

DISCOVER -> TRY -> AUDIT -> STOP -> RESTORE

Place public interest, accessibility, human fallback and the right to exit before every AI scenario. T1 is an offline synthetic tabletop only: not authorized, not run in the field, with real performance kept null.
