

Urban space becomes an operating diagram with priority, time windows, human override and rollback.

THE CITY TIMETABLE | Overall Concept & Scope

PROVISIONAL ROUGH GEOMETRY | NOT AN OFFICIAL REDLINE | Recalculate after official polygons
Basis: official announcement, Agent taskbook and repo provisional boundaries. Design layers are conceptual.

Three Key Areas | Three Time-governance Tasks

Zhongzhiyuan

AI Timetable Testing Ground

4 test-validation scenarios

Controlled test / human takeover / stop & rollback

Beijing AI Origin Community

24h Co-creation Timetable Community

Demo Night + no-app services

Resident quiet / accessibility / non-AI equivalents

Dazhongsi

AI-native Everyday-life Timetable

People-first peak / logistics off-peak

Geometry provisional / no precise station-quadrant design

Pilgrimage nodes: **TIMETABLE HALL • TIME EXCHANGE • CENTENNIAL DEPARTURE**

PROVISIONAL ROUGH GEOMETRY | NOT AN OFFICIAL REDLINE | Recalculate after official polygons

Mobility × Blue-Green × T0 Rights | Continuity Before Scheduling Efficiency

PROVISIONAL ROUGH GEOMETRY | NOT AN OFFICIAL REDLINE | Recalculate after official polygons
T0 = design-protocol right, not statutory road/fire redline.

Metrics & Evidence Chain | Making the AI City Checkable

100% means design-contract field coverage, not observed performance.

PASS: T0 continuous | FAIL: block sole accessible/emergency route
