

CENTENNIAL JING-ZHANG AI INNOVATION BELT

JING-ZHANG OPEN GROUND

JING-ZHANG OPEN GROUND

Turn a century-old railway into a nine-kilometre AI city prototyping ground.

Author: Wang Haoran (王浩冉) · Conceptual urban design submission

By 2035 Jing–Zhang is not a technology showroom, but a civic intelligence spine that people can enter, industries can test in and the city can learn from.

Contents + reading route

Spatial idea first; industry and mobility next; three detailed grounds, twelve scenarios and delivery last.

01 01 Vision + brief 01—08

02 02 Corridor + systems 09—20

03 03 Three open grounds 21—32

04 04 Scenarios + delivery 33—40

Task–response matrix

Each of the six official tasks is answered by space, figure, metric and evidence.

01 Development vision → masterplan figure + metric + source	02 AI ecosystem → industry chain figure + metric + source
03 Urban form → three detailed plans figure + metric + source	04 Mobility + services → five stitches figure + metric + source
05 Infrastructure → component kit figure + metric + source	06 Heritage park → cultural commons figure + metric + source

Three design scales

Regional study, nine-kilometre urban design and three detailed key areas become progressively specific.

02 / SCOPE

Three scales, one design argument

Research → overall design → detailed prototypes

The proposal gets more spatially specific as evidence becomes more local.

Existing assets

Rail heritage, park, universities, industry and neighbourhoods form one innovation infrastructure.

EXISTING ASSETS

Innovation already exists along the railway

Heritage · park · universities · industry · communities · metro

- | | |
|----------------------|-------------------|
| 01
RAIL HERITAGE | 02
PUBLIC PARK |
| 03
UNIVERSITIES | 04
AI INDUSTRY |
| 05
NEIGHBOURHOODS | 06
METRO HUBS |

Design connects assets; it does not erase their existing

Three breaks

Industry transfer, east–west mobility and everyday–life gaps must be repaired together.

1

INDUSTRY

Research reaches application too slowly

2

MOBILITY

Rail corridor still interrupts east–west walking

3

LIFE

AI remains an event, not an everyday service

What is Open Ground?

Railway pioneering spirit, open civic space and open-source innovation become one spatial idea.

Nine-kilometre masterplan

One public intelligence spine, two innovation wings, three open grounds and five stitches.

01 / MASTERPLAN

A nine-kilometre public intelligence spine

One spine · two wings · three open grounds · five cross-corridor stitches

THREE OPEN GROUNDS

- 1 Verification Ground**
Full-stack R&D · robot test · pilot production
- 2 Co-creation Ground**
University transfer · open source · AI education
- 3 Living Ground**
Agent-native services · culture · night economy

FACT / MODEL / DESIGN
Official facts remain distinct from provisional geometry.

Overall programme

The corridor supports public learning and experience; two wings provide professional services and applications.

03 / LAND + INDUSTRY

Production spaces are arranged as a gradient

Lab → open workshop → validation → pilot production → city application

Existing land-use facts are not overwritten. Coloured layers are conceptual.

Land + industry

Research, open source, validation, pilot production and application form a continuous spatial gradient.

East–west stitches

500 m walking networks and 15–minute services identify priority interfaces.

04 / MOBILITY + BLUE-GREEN

Five stitches turn the corridor into a connector

500 m walking network · stations · crossings · 15–minute services

1 Xuezhiyuan—Zhongzhi

2 Wudaokou

3 Qinghuayuan station

4 Dazhongsi quadrants

5 Community greenway

Priority: safe ground–level continuity before la

Blue–green commons

The heritage park is both ecological corridor and everyday learning commons.

New infrastructure

Compute, data, robots, energy and sensing are embedded in maintainable small components.

Precedent translation

Living labs, city science, Fab Labs and participation platforms offer methods, not copied forms.

01

MIT City Science

Method translated: public interface, evidence or operation.

02

Amsterdam Living Lab

Method translated: public interface, evidence or operation.

03

Decidim

Method translated: public interface, evidence or operation.

04

Ars Electronica

Method translated: public interface, evidence or operation.

05

Paris SmartCity LL

Method translated: public interface, evidence or operation.

06

Fab Lab Barcelona

Method translated: public interface, evidence or operation.

AI industry chain

Research outcomes enter the city through five operable spatial moves.

Three grounds + two wings

Zhongzhiyuan verifies, AI Origin co-creates, Dazhongsi brings AI into daily life.

Innovation network

Universities, platforms, companies, agencies and residents connect around tasks, not park borders.

Five space prototypes

Lab, workshop, validation garden, pilot box and city interface combine as a kit of parts.

SECTION / PROTOTYPE

Verification garden section

People first · machines at walking speed · reversible components

Illustrative section: dimensions and engineering systems require professional design.

24-hour talent chain

Learning, work, testing, exchange, consumption and rest share space across the day.

Zhongzhiyuan plan

A validation garden links R&D, pilot production, export services and Xuezhiyuan station.

Industry structure

Full-stack R&D inside, public demonstration outside, controlled tests within explicit limits.

01 R&D CORE

02 PILOT EDGE

03 PUBLIC DEMO

04 METRO LINK

Spatial section

Machines move slowly; people have priority; observation and test zones remain connected but distinct.

Controlled tests

Robots and delivery systems begin in a stoppable and recoverable validation garden.

EXISTING

CONCEPT

AI Origin plan

University transfer, open source, AI education and youth life form a one-kilometre learning circle.

Campus–street network

Wudaokou translates campus capability into public courses and workshops.

01 CAMPUS TRANSFER

02 OPEN WORKSHOP

03 LEARNING COMMONS

04 YOUTH LIFE

Open workshop + AI education

Real problems enter the workshop; prototypes and evidence return to the community.

EXISTING

CONCEPT

Youth living room

Twenty-four-hour innovation moves out of offices into public places for staying and exchange.

EXISTING

CONCEPT

Dazhongsi plan

Four quadrants work together as an AI living open ground.

Four-quadrant stitch

Unified ground guidance, accessible continuity and cycle crossings repair legibility first.

EXISTING

CONCEPT

Agent-native commerce

Devices, content, community services and metro interchange share active ground floors.

SECTION / PROTOTYPE

Four-quadrant living section

People first · machines at walking speed · reversible components

Illustrative section: dimensions and engineering systems require professional design.

Culture + night co-stage

Night economy and railway memory coexist without turning heritage into a technology prop.

Twelve-scenario matrix

Mobility, health, education, robots, culture and operations share one accountability system.

Mobility + robots

Low-speed, visible and stoppable rules come before scaling.

EXISTING

CONCEPT

Health, learning + inclusion

Technology first improves daily access for older people, children, disabled people and carers.

culture

inclusive mobility

public question desk

Rail culture + kit of parts

Wayfinding, question desks, displays, seating and micro-utility rooms use maintainable modules.

RAIL CULTURE + KIT OF PARTS

A recognisable family of small, maintainable interfaces

No heritage decoration; each component carries a real urban function

01
WAYFINDING
reversible · repairable

02
QUESTION DESK
reversible · repairable

03
DISPLAY RAIL
reversible · repairable

04
REST + SHADE
reversible · repairable

05
MICRO UTILITY
reversible · repairable

06
HONOUR WALL
reversible · repairable

Agent operating system

Six agents coordinate; consent, professional decision, public review and stop/restore remain human gates.

90 days—1 year—3 years

Start with one stitch and one test, then connect three grounds and replicate along nine kilometres.

09 / DELIVERY

Prove a small loop, then scale the network

90 days → 1 year → 3 years

90 DAYS

one stitch + one test + one public review

Wayfinding / accessible delivery / question desk

1 YEAR

three open grounds operate as one network

Workshops / validation / cultural programme

3 YEARS

standards, procurement and maintenance ma

Replication across the 9 km corridor

Advance only when evidence, maintenance ownership and stopping conditions are explicit.

Metrics, evidence + risk

Every number returns to geometry; every concept has a status; risk is managed in one place.

THE RAILWAY OPENS A PATH. THE CITY KEEPS LEARNING.

Nine kilometres help the city keep learning—and let everyone see how they can participate in its future.

Wang Haoran (王浩冉) · 2026
