

The three alternatives are three visible spatial outcomes, not text cards

One submitted geometry is rotated for full-belt comparison; the base recedes while retention, relocation, pause, and detour lead.

01 Continuous Framework Conservation

South ← → North

0 500 1 km

Selection gate: Boundary fully contains commons belt and nodes; all six connections pass.

Elimination gate: If any point fails, break the chain there and eliminate the fully continuous claim.

Current action: Check point by point; only markings, movable furniture, and operating tests.

02 Existing-Interface Mending

South ← → North

0 500 1 km

Selection gate: $\Delta GFA \leq 0$ and $S \geq 0$; verified existing stock can host services.

Elimination gate: $S < 0$; or $\Delta GFA > 0$ and $R_{new} > R_{existing}$.

Current action: Do not build the proposed footprint; move the node to a verified existing entrance.

03 Neighborhood-Avoidance Loop

South ← → North

0 500 1 km

Selection gate: Impact is non-zero and mitigation funding or acceptance is unclosed.

Elimination gate: All impacts are zero; or every non-zero impact is closed.

Current action: Pause the impacted segment and use a legible detour; enable R1 only.

Read the full belt in three panels: same north, same scale, stitchable

Each window shows the commons belt, three longitudinal routes, cross-connections, nodes, and interfaces to verify.

Three interfaces: plan location + detailed section + responsibility chain

Building outlines, four rail states, interfaces, and leaders are vector; no dimensions, floors, or program conclusions.

01 Quiet Residential Side

Daily passage and rest before events

West: residential interface to verify

East: land-use attribute to verify

Benefit / cost / responsibility

Benefit

Quiet passage, shaded stays, and seating.

Cost

Noise, lighting, detour, maintenance, and exclusion risks.

Responsibility

Operator records impacts; implementer restores; users review.

R1 removable - R2 requires restoration - stop R3 while data are unknown

02 Open Research Side

Open collaboration may close; public passage stays open

West: research entrance to verify

East: land-use attribute to verify

Benefit / cost / responsibility

Benefit

Public problems, collaboration, and Human Review.

Cost

Data rights, safety, privacy, energy, and hosting labor.

Responsibility

brief / data / safety steward
Signed off separately

R1 removable - R2 requires restoration - stop R3 while data are unknown

03 Station-City Event Side

Protect passage and daily services before display

West: station-city entrance to verify

East: land-use attribute to verify

Benefit / cost / responsibility

Benefit

Record passers-by, visitors, residents, and merchants separately.

Cost

Cleaning, security, loading, noise, strike-down, and business impacts.

Responsibility

Show organizer and site responsibility together; close after restoration acceptance.

R1 removable - R2 requires restoration - stop R3 while data are unknown
