

# Jing-Zhang Flow Commons

Enterprise service taskbook and P0 evidence contract

FIELD RELEASE: HOLD

6

unique task outputs

6

case mechanisms

0

field records

Conceptual package. Evidence first; authority before execution.

# Flow Commons Taskbook Delivery Atlas

CONCEPT · NO COMMITMENT

six tasks · distinct visible outputs

## 01 · IDENTITY

**Jing-Zhang Flow Commons**  
enterprise request ↔ resident return

### mark logic

Opposing directions share one release gate;  
no public return means no enterprise window.

## 02 · 3 POSITIONS / 5 FUNCTIONS / 3 AREAS + 2 WINGS

**P1 Centennial Jing-Zhang culture belt**  
Questions and repairs become a correctable archive

**P2 Urban AI life-experience belt**  
Human entry, public return and exit stay visible

**P3 AI convergence-innovation belt**  
Mobility, equity, responsibility and withdrawal gates

F1 full-stack AI innovation

F2 world-class AI ecosystem

F3 AI+ scenario enablement

F4 AI-enabled active city

F5 global AI-governance voice

A1 Zhongzhiyuan

A2 AI Origin

A3 Dazhongsi

W1 Tech Service Wing

W2 Xiaoyuehe Wing

## 03 · SIX GLOBAL MECHANISMS → EIGHT-RESOURCE LOOP

**CASE-01 Helsinki AI Register**  
mobility status card + complaint route  
do not copy · register ≠ safety, access or consent

**CASE-02 Amsterdam Algorithm Register**  
human equivalent + appeal + stop state  
do not copy · foreign register ≠ local compliance

**CASE-03 Singapore AI Verify**  
model card + takeover drill + withdrawal receipt  
do not copy · test tool ≠ certification or permission

**CASE-04 Decidim Barcelona**  
paper + phone + walk-in feedback + readback  
do not copy · digital access ≠ device-free access

**CASE-05 UK Algorithmic Transparency Recording Standard**  
nine-field public preflight for every window  
do not copy · UK standard ≠ Beijing statutory rule

**CASE-06 Seoul AI Foundation**  
real problem → pilot receipt → follow-through  
do not copy · no partnership, funding or equal mandate

Eight resources exchange conditions, then return evidence:

LAND

SPACE

INDUSTRY

CAPITAL

TALENT

COMPUTE

DATA

SCENARIO

no partnership / funding / investment claim

## 04 · LANDMARKS · CULTURE · ANNUAL OPS

**L1 Jing-Zhang Return Marker**  
one question · source · ordinary route · removal

**L2 Origin Contribution Exchange**  
developer contribution ↔ resident question + help

**L3 Four-Quadrant Responsibility Beacon**  
capacity · return · owner · pause · restoration

Every intelligent service owes the city a public way back.

Q1 Open Questions Season

Q2 Care and Commute Co-test Week

Q3 Public Urban-Agent Review

Q4 Jing-Zhang Return Forum

Every season leaves a public artifact, stop rule and owned follow-up; attendance is not public benefit.

## 05 · DISTINCT OUTPUT INDEX FOR SIX TASKS

### agent.1

- identity
- positioning
- functions

### agent.2

- global cases
- ecosystem resources
- industry-space mapping

### agent.3

- ten scenario cards
- three industry tests
- eight participant groups

### agent.4

- three landmark interfaces
- public-route rules
- honor / correct / remove

### agent.5

- culture story
- five-layer signage
- international copy

### agent.6

- four-quarter operations
- developer-to-pilot path
- review + retirement loop

# THREE KEY AREAS | THREE SPATIAL PROTOTYPES

V2.2 / PROVISIONAL

Each board pairs an enterprise request with a resident return, spatial move, stop rule and evidence request.

## 01 ZHONGZHIYUAN | RIVER FORECOURT

WORK ARRIVAL x PUBLIC RIVER PASSAGE

### CONCEPT PLAN

### INDICATIVE SECTION

ENTERPRISE: peak feeder + midday loading

RESIDENT: river walk stays open; curb returns

STOP: public passage breaks or nobody clears curb

### EVIDENCE BEFORE RELEASE

entry | rights | section | peak flow | owner receipt

## 02 AI ORIGIN | CARE LOOP

DAILY LIFE x HUMAN-EQUIVALENT ENTRY

### CONCEPT PLAN

### INDICATIVE SECTION

ENTERPRISE: visitor booking + campus service

RESIDENT: care loop + quiet rest + human entry

STOP: app-only access or broken wheelchair/care chain

### EVIDENCE BEFORE RELEASE

route audit | night light | staff | fallback | appeal

## 03 DAZHONGSI | FOUR-QUADRANT HALL

TASK ANCHOR x STATION-CITY PUBLIC INTERFACE

### CONCEPT PLAN

### INDICATIVE SECTION

ENTERPRISE: visitor, event exit + timed loading

RESIDENT: 4-way passage + night human fallback

STOP: PROV-KEY-003 is not station-anchored

### EVIDENCE BEFORE RELEASE

official anchor | sections | flow | rights | egress owner

### COMMON RELEASE GATE

ENTERPRISE GETS: arrival, feeder, visitor or loading window

RESIDENT GETS: continuous access, human route and appeal

MISSING FIELD PROOF: record only; do not book or expand

SLOWEST GROUP WORSE: stop; transit + human

Concept prototypes, not surveyed conditions or engineering alignments. Sources: public brief, geometry/key\_areas.geojson and Issue #1029. Recalculate after official geometry, station anchors, rights, sections, flows and responsibility receipts.

# Enterprise—Resident Reciprocity · Spatial Decision

HOLD · NOT FIELD-RUN

Three alternatives, five design scales, and resident rights kept visible

## 01 / Spatial alternatives and decision

ALT-A

### Enterprise-first shared curb

REJECT · displaces ordinary and accessible routes

One digital priority queue for arrival and loading

Fail when no fallback, takeover or public edge exists

ALT-B

### Three independent windows

REVISE · splits responsibility and appeal

Local conflict falls, but no shared closeout receipt

Fail when handoff, appeal or blackout ownership splits

ALT-C

### Reciprocal node chain

ADVANCE TO DESIGN REVIEW

Pair enterprise request, resident return and takeover

Shared receipt grammar, independent maintenance, reversible

## 02 / Five scales and three nodes

1:5000

1:2000

1:500

1:200

1:50

regional relation

network interface

node plan

section and fallback

receipt edge

Each scale answers one spatial question. All remain conceptual until survey and engineering review.

### THREE NODES

Zhongzhiyuan · River Forecourt

arrival and loading

AI Origin · Care Loop

daily life and care

Dazhongsi · Transfer Hall

rail and curb

## 03 / Resident rights stay first

ordinary access

accessible and staffed routes

rail and bus

appeal and pause

privacy and exit

each has a failure action and public receipt

# SERVICE WINDOWS × GEOMETRY LEDGER

Conceptual operating windows and geometry ratios use different denominators

## 01 CONCEPTUAL SERVICE WINDOWS

No local demand volume or share is asserted

07:00-10:00 AM arrival

rail/bus backbone · grouped arrival count · accessible entry

DESIGN LEDGER

FIELD BASELINE = 0

release HOLD

10:00-16:00 Midday service

care and daily service · curb clearance · no-device route

DESIGN LEDGER

FIELD BASELINE = 0

release HOLD

16:00-20:00 PM return

ordinary return · transfer reliability · non-enterprise protection

DESIGN LEDGER

FIELD BASELINE = 0

release HOLD

20:00-23:30 Night return

staffed fallback · lighting and wait · last-service recovery

DESIGN LEDGER

FIELD BASELINE = 0

release HOLD

## 02 GEOMETRY DENOMINATORS

Derived only from provisional GeoJSON

12.34%

conceptual green-space ratio

$\text{green\_space.geojson} \div \text{site\_boundary.geojson}$

7.33%

conceptual public-space ratio

$\text{public\_space.geojson} \div \text{site\_boundary.geojson}$

2.72%

building-footprint ratio

$\text{buildings.geojson} \div \text{site\_boundary.geojson}$

These area ratios are not time-window demand shares and cannot validate demand, capacity or performance.

# MULTIMODAL MOBILITY LOOP

Five ground modes + one conditional air experiment / people flow stays visible

## 01 MODE STACK / 方式叠层

Backbone → transfer → curb → people flow

# AI Origin Care Loop Minimum P0 Evidence Pack

## 01 · WHY THIS NODE FIRST

### AI Origin Community Care Loop

- Validate daily resident access and a human-equivalent entry;
- no dependence on the unresolved Dazhongsi anchor;
- no enterprise-vehicle expansion as a pilot prerequisite.

ordinary chain

accessible alternative

## 02 · FOUR WINDOWS · ONE VERSION AND STOP CONTRACT

Every record carries date, weather, counter role, missing interval and spatial version; incomparable windows do not enter calibration.

## 03 · SEVEN EVIDENCE STREAMS · TEMPLATES READY · FIELD RECORDS 0

|    |                                                                                            |           |
|----|--------------------------------------------------------------------------------------------|-----------|
| E1 | grouped flow and request<br>2 weekdays + 1 stress window before calibration                | 0 RECORDS |
| E2 | segment accessibility walk<br>ordinary + accessible chains walked by day and night         | 0 RECORDS |
| E3 | curb and public-route responsibility<br>accepted receiver + public-route restoration check | 0 RECORDS |
| E4 | human and public-transport fallback<br>one outage/weather human takeover per window        | 0 RECORDS |
| E5 | data minimisation and retention<br>purpose + expiry locked before collection               | 0 RECORDS |
| E6 | participatory threshold sign-off<br>each affected group can disagree and correct           | 0 RECORDS |
| E7 | public status and closeout<br>readable board + paper/phone correction route                | 0 RECORDS |

UNKNOWN never becomes zero; any group hidden by an average triggers a block.

## 04 · RACI AND FIVE RELEASE GATES

|                                      |            |
|--------------------------------------|------------|
| site and data steward                | UNASSIGNED |
| transport and accessibility reviewer | UNASSIGNED |
| resident carer disabled user panel   | UNASSIGNED |
| human service and transit handoff    | UNASSIGNED |
| independent closeout reviewer        | UNASSIGNED |
|                                      |            |
| G1 scope and rights                  | HOLD       |
| G2 dated grouped baseline            | HOLD       |
| G3 accessible and human fallback     | HOLD       |
| G4 responsibility and resources      | HOLD       |
| G5 participatory review and closeout | HOLD       |

Current: 0 confirmed roles · 0 group sign-offs · 0 passed gates

MODEL INVALID → STOP:                      incomparable window / missing group denominator / route version changed / missing interval / unmodeled barrier

This is a participant-controlled field protocol, not a field result. Missing official geometry does not block the protocol, but zero records never advance to P1.

# FLOW COMMONS EVIDENCE BOARD

Separate declared metrics, delivery completeness and field release
