

Evidence scope and spatial framework

THE CHOICE LINE · AI IS PRESENT. PEOPLE RETAIN THE CHOICE.

01/10 THE CHOICE LINE

One evidence chain, three scales

From public task to reviewable space, without disguising rough geometry as a precise basemap

Three-zone pipeline and Service Twin interfaces

THE CHOICE LINE · AI IS PRESENT. PEOPLE RETAIN THE CHOICE.

03/10 THE CHOICE LINE

Three zones form one evidence pipeline

The north discovers failure, the middle enables public review, and the south accepts real services

Source: submission GeoJSON, metrics.json, source/assumption and scenario models; EPSG:4548 recomputation

Provisional boundary for proposal generation and self-check only; not a redline, survey, title, approval, or engineering basis

03

04/10 THE CHOICE LINE

One walk, two equally visible interfaces

Seven ports and three sections join choice, access, blue-green space, and service continuity

Source: submission GeoJSON, metrics.json, source/assumption and scenario models; EPSG:4548 recomputation

Provisional boundary for proposal generation and self-check only; not a redline, survey, title, approval, or engineering basis

04

Every node has equally visible, reachable, and completable twin interfaces

11.413 km² · 15.29% · 12 / 7 / 4

provisional area · proposal green ratio · nodes/ports/landmarks

01 · MOVE

DESIGN MOVE

Discover failure in the north, conduct public review in the center, and accept real services in the south—linked by one Ground Truth Walk and three Service Twin sections.

02 · VERIFY

VERIFICATION

12 nodes, seven stitching ports, and three section types share IDs across geometry, scenario cards, metrics, and figures.

03 · GATE

SCALE GATE

Every node must make AI and human/offline routes equally visible, reachable, and completable; the proposal does not build two engineering tracks.

Choice Equivalence Index and delivery protocol

THE CHOICE LINE · AI IS PRESENT. PEOPLE RETAIN THE CHOICE.

05/10 THE CHOICE LINE

Choice equivalence must be measured

Six CEI dimensions, geometry recalculation, and compliance evidence govern expansion

Source: submission GeoJSON, metrics.json, source/assumption and scenario models; EPSG:4548 recomputation

Provisional boundary for proposal generation and self-check only; not a redline, survey, title, approval, or engineering basis

05

06/10 THE CHOICE LINE

One task, two completable routes, one owner

Service Twin is a pilot deliverable, not a hidden fallback button

Source: submission GeoJSON, metrics.json, source/assumption and scenario models; EPSG:4548 recomputation

Provisional boundary for proposal generation and self-check only; not a redline, survey, title, approval, or engineering basis

06

CEI≥90 with every component≥80 is a proposed gate awaiting baseline

11.413 km² · 15.29% · 12 / 7 / 4

provisional area · proposal green ratio · nodes/ports/landmarks

01 · MOVE

DESIGN MOVE

Use the six-dimension Choice Equivalence Index—V, O, T, C, A, and G—to measure visibility, outcome, time, cost, persona access, and governance.

02 · VERIFY

VERIFICATION

Share one task ID, price basis, service window, and accepted outcome; retain evidence for choice receipt, minimum data, human takeover, and appeal.

03 · GATE

SCALE GATE

CEI≥90 with every item≥80 is a proposed pilot gate awaiting baseline; any breach pauses, remediates, or transfers the service to humans.

Twelve scenarios and least-served-persona gate

THE CHOICE LINE · AI IS PRESENT. PEOPLE RETAIN THE CHOICE.

07/10 THE CHOICE LINE

Twelve scenario cards, twelve stoppable commitments

Every card fixes a data budget, human takeover, failure, and appeal

Source: submission GeoJSON, metrics.json, source/assumption and scenario models; EPSG:4548 recomputation

Provisional boundary for proposal generation and self-check only; not a redline, survey, title, approval, or engineering basis

07

08/10 THE CHOICE LINE

The weakest persona governs scale

An average cannot hide failure among older, blind, minor, or international users

Eight personas are acceptance tasks, not labels

Source: submission GeoJSON, metrics.json, source/assumption and scenario models; EPSG:4548 recomputation

Provisional boundary for proposal generation and self-check only; not a redline, survey, title, approval, or engineering basis

08

Averages cannot conceal failure for older adults, disabled people, minors, or visitors

11.413 km² · 15.29% · 12 / 7 / 4

provisional area · proposal green ratio · nodes/ports/landmarks

01 · MOVE

DESIGN MOVE

Use 12 fixed-field scenario cards and 8 task personas to make inclusion repeatably testable rather than a demographic label.

02 · VERIFY

VERIFICATION

Each card fixes the task, I/O, pre-collection notice, minimum data, twin route, owner, failure, stop, appeal, and CEI.

03 · GATE

SCALE GATE

The least-served persona—not average satisfaction—gates expansion; one key fallback failure cannot be hidden by averages.

Operational loop and correctable memorial

THE CHOICE LINE · AI IS PRESENT. PEOPLE RETAIN THE CHOICE.

09/10 THE CHOICE LINE

Evidence first, then anchors, then scale

Three-stage gates, four-season operations, RACI, and human-route funding form one loop

Source: submission GeoJSON, metrics.json, source/assumption and scenario models; EPSG:4548 recomputation

Provisional boundary for proposal generation and self-check only; not a redline, survey, title, approval, or engineering basis

09

10/10 THE CHOICE LINE

From engineering autonomy to public autonomy

Open sleepers record contribution, version, license, and real adoption status—and permit correction

Source: submission GeoJSON, metrics.json, source/assumption and scenario models; EPSG:4548 recomputation

Provisional boundary for proposal generation and self-check only; not a redline, survey, title, approval, or engineering basis

10

Submission, selection, and implementation stay distinct; OPEX gates expansion

11.413 km² · 15.29% · 12 / 7 / 4

provisional area · proposal green ratio · nodes/ports/landmarks

01 · MOVE

DESIGN MOVE

Audit and bench-test in months 0–6, open one anchor per zone in months 6–18, and scale to twelve nodes only in months 18–36; elsewhere remains uncommitted.

02 · VERIFY

VERIFICATION

Quarterly operations, six-party RACI, human-route OPEX, and the claim ledger enter one review loop; personal data is never the business model.

03 · GATE

SCALE GATE

Selection is not implementation; safety, CEI, public review, and recurring funding must all pass before the state moves from selected to implemented.
