

# Jingzhang Trifold

京张三叠 · JINGZHANG TRIFOLD — Rail · Academy · Intelligence Meridian

## Core Concept

This corridor has three times served as the national launch site for General Purpose Technology infrastructure — the Rail Layer (1909) moved people and goods, the Academy Layer (1952) nurtured people and ideas, and the Intelligence Meridian Layer (2020s) computes data and intelligence. Jingzhang Trifold overlays these three 'first launches' into a walkable, readable, and continuously growing urban innovation belt.

### Rail Layer · 1909

The first trunk railway designed and built by Chinese engineers departed from here; Zhan Tianyou solved the Qinglongqiao gradient with a herringbone switchback. The Rail Layer moved people and goods — the layer of the builders.

### Academy Layer · 1952

The national reorganization built the 'Eight Colleges' along Xueyuan Road, forming with the CAS institutes in Zhongguancun the republic's knowledge base. The Academy Layer nurtured people and ideas — the layer of the scholars.

### Intelligence Meridian · 2020s

The Dazhongsi–Zhichun–Wudaokou line hosts China's densest AI cluster. The Meridian computes data and intelligence; built for AI, it must also reserve interfaces for the next general-purpose technologies after AI.

## Spatial Structure · One Spine · Two Corridors · Three Harbors · Nine Mileposts

### One Spine

The Jing–Zhang Railway Heritage Park main spine — a north–south slow-mobility greenway, centerline approx. 9.6 km, the physical carrier of the Rail Layer and the public-life main axis.

### Two Corridors

East: Xueyuan Road learning-vein corridor (the scholars' story); West: Xiaoyue River blue-green corridor (ecology + low-risk scenario testing belt).

### Three Harbors

South Harbor Dazhongsi (experience) / Central Harbor AI Origin Community (conversion) / North Harbor Zhongzhiyuan (acceleration) — narrative home grounds of the three layers.

### Nine Mileposts

Ten milepost nodes K0–K9 along the spine; each is one scenario, one public artwork, one soundscape — a walkable century of history.

## Core Metrics Band (computed · provisional caliber)

Computed site area

11.4128 M sq m

Three key areas (computed)

192.9 / 104.3 / 72.0 ha

Green coverage

20.2% / 28.9%

Public-space ratio

≈ 2.1%

Building footprints

1.995 M sq m · 17.5%

Main spine / stitching streets

9.6 km / 21 streets

Jingzhang Trifold · Rail · Academy · Intelligence Meridian

## B2 · Design Board

## Three Harbors Detailed Design

South Harbor · Dazhongsi AI Industry Cluster (computed approx. 72.0 ha)

Rail Layer home ground · the 'departure hall' of the belt

Positioning: a living room where a century of memory overlaps AI-native consumption. 'One square, one installation, one market' — the urban living-room square connects the Dazhongsi metro hub; the 'New Bell' light-and-sound installation lets the Yongle Great Bell converse with an AI urban soundscape; the open-source market and unmanned-retail test street form an AI-native consumption band. Risk: complex commercial property rights — negotiated micro-renewal, no large-scale demolition assumptions.

Central Harbor · Beijing AI Origin Community (computed approx. 104.3 ha)

Academy Layer home ground · the 'Kilometer Zero' of the belt

Positioning: the hub converting knowledge into ecosystem, the 'origin' of Chinese AI. 'One origin, one bridge, one trail' — the K0 Origin Square overprints the railway mileage origin and the AI Origin; the Herringbone Switchback Bridge stitches the two sides of the spine; the Academician Trail AR guide tells the stories of the Eight Colleges and Zhongguancun scientists. Risk: multi-party property rights and existing park operations; require consultation.

North Harbor · Zhongzhiyuan AI Acceleration Area (computed approx. 192.9 ha)

Intelligence Meridian home ground · the 'acceleration harbor' facing the future

Positioning: spatial carrier of the full-stack independent innovation system and the reserved interface for the next general-purpose technology. 'One field, one gate, one blank' — a reconfigurable Intelligence Meridian test field; the K9 Gate of the Future closing the northern end; approx. 5% blank land reserved for the technologies 'after AI'. Risk: construction conditions near the Fifth Ring need verification; blank-land activation rules should be defined by governance.

## T2

AI music-generation public test field

**T3**

Urban service robot staging unit

## Slow Mobility & Blue-Green

The main-spine park belt (a continuous green corridor approx. 120 m wide) and the Xiaoyue River blue-green corridor form a 'one vertical, one horizontal' skeleton; with ten K-node pocket parks and twenty-one platform-park squares they build a three-tier 'avenue-park-square' public-space system. Computed green coverage: approx. 20.2% (standalone layer) / 28.9% (land-balance caliber). The main-spine greenway runs approx. 9.6 km linking K0-K9; twenty-one 'stitching streets' cross east-west at approx. 500 m intervals (seven double as secondary vehicular roads); the Xiaoyue River waterfront cycling path is the second north-south slow-mobility line.

## AI Pilgrimage Landmarks

### ① Kilometer–Zero Origin Square

K0 · Central Harbor: overprinted memorial of the railway mileage origin and the AI Origin; paving scored on the 1,435 mm standard gauge.

## ② Herringbone Switchback Bridge & Memory Hall

Near K2: a pedestrian bridge prototyped on the herringbone switchback; the hall beneath shows oral histories and railway relics of the old Qinghuayuan station.

### ③ 'New Bell' Light-and-Sound Installation

South Harbor: real-time dialogue between the 600-year Yongle Great Bell's voiceprint and the AI urban soundscape; core of the belt's auditory identity.

#### ④ K9 Gate of the Future

Northern end of the North Harbor: a closing landmark signaling 'the next corridor' northward with light pulses at night.

## B3 · Evidence Board

Metric Recalculation · Core Metrics (computed values · provisional caliber · reproducible under EPSG:4548)

Computed site area

11.4128 M sq m

Announcement caliber approx. 11.40 M sq m; deviation approx. 0.1%

Three key areas (computed)

192.9 / 104.3 / 72.0 ha

Deviations from announcement values all under 0.5%

Green coverage

20.2% / 28.9%

Standalone green-layer caliber / land-balance caliber

Public-space ratio

≈ 2.1%

Union of 34 standalone squares, approx. 238,900 sq m

Building footprints

1.995 M sq m · 17.5%

784 conceptual footprints: 121 retained / 104 reuse / 416 new

Main spine / stitching streets

9.6 km / 21 streets

Site length approx. 9.7 km N–S; road centerlines total approx. 80.3 km

### Statements & Assumptions

#### Provisional Boundary Statement

As of submission, the organizer has not released the official precise boundary or key-area polygons. The site boundary and three key areas adopt the repository-registered provisional coarse boundary, used only for AI generation, visualization, and local self-checking; it must not be interpreted as an official planning boundary, an approval basis, or a basis for precise area figures. Once official polygons are published, land use, buildings, roads, green space, public space, phasing, and all area metrics must be recomputed.

#### Boundary of Conceptual Recommendations

This proposal represents no government review, approval, or implementation commitment; all spatial recommendations are conceptual; the provisional boundary is not a red line; FAR, height, retain-renovate-demolish decisions, alignments, capacities, investment, and scheduling are all non-final; no testing scenario constitutes approved operation; statements on funding, policy, and investment attraction are development directions and constitute no government commitment.

#### Metric Reproducibility

All area-type metrics are computed as polygon areas from the submitted GeoJSON under EPSG:4548 (CGCS2000 three-degree zone, central meridian 117°E); ratio-type metrics use the computed provisional-boundary area as denominator; any third party can reproduce them with the same method. The machine-audit layer is fully preserved in sources.json · metrics.json · compliance\_matrix.json · standard\_matrix.json · design\_depth\_matrix.json · geometry/\*.geojson. Compliance coverage: item-by-item coverage of the announcement tasks (all items of sections 1.3–1.5) and agent tasks (agent.1–agent.6) is documented in compliance\_matrix.json; responses to the five mandatory professional standards in standard\_matrix.json; completion status of the fifteen design-depth requirements in design\_depth\_matrix.json.

#### Copyright & AI-Generation Responsibility

Only public or rights-cleared materials are used; all drawings, identities, and graphics are AI-generated or originally drawn conceptual expressions, using no unauthorized typefaces, trademarks, portraits, or copyrighted images. This proposal was generated by an AI agent and confirmed through human conceptual-direction discussion; final judgment belongs to humans and professional teams (Article 7 of the co-creation charter). Full copyright statement: report/copyright\_statement.md.

### PROVISIONAL

PROVISIONAL · All spatial recommendations are conceptual reference schemes generated on a registered provisional coarse boundary; they do not replace statutory planning and constitute no government-approved conclusion. Once official boundary and key-area polygons are published, all area metrics must be recomputed.
