

Jing-Zhang Noonline SLA V3.0 / Spatialized Noonline SLA

AI failure modes become urban-design constraints: physical routes, fixed information, secondary support and manual fallback precede algorithms.

Jing-Zhang Two-Level Spatial Network

V2 service protocol -> V3.0 spatialized Noonline SLA; concept geometry, not official road GIS.

PROVISIONAL BOUNDARY / CONCEPT DESIGN / NOT FIELD VERIFIED

- V2 -> V3.0
- 01 1 abstract ROAD -> 11 spatial LineStrings
 - 02 0 -> 12 primary + 8 secondary points
 - 03 0 -> 5 manual fallback locations
 - 04 single line -> Level 1 / Level 2
 - 05 principles -> WP-01~06 + Phase 0~3

NETWORK LEGEND

- Level 1 / SLA service support
Three key areas and direct access; <=400 m is a concept's support-spacing target.
- Level 2 / inter-zone connector
Route recognition, Jing-Zhang sequence and basic AI-OFF wayfinding; no continuous SLA coverage claim.
- 12 primary service nodes
Concept service positions; facility state remains field unknown.
- 8 secondary physical supports
Fixed information and shade/rest reservation; not existing facilities.
- 5 manual fallback points
Human role, hours and responsibility remain unverified.

LEVEL 1 / SLA SERVICE SUPPORT

Three areas and direct access: 12 primary + 8 secondary; <=400 m is a geometry-derived concept design target.

LEVEL 2 / INTER-ZONE JING-ZHANG CONNECTOR

ROAD-001 and ROAD-003: route recognition, cultural sequence and AI-OFF wayfinding; no continuous SLA coverage claim.

Three Key Areas, Three Spatial Prototypes

V3.0 / FIG 03

One Noonline SLA principle takes different spatial form in R&D testing, civic culture, and transit-business transfer.
