

V2 service protocol -> V3.0 spatialized Noonline SLA; concept geometry, not official road GIS.

V2 -> V3.0: from a service protocol to an urban spatial system

Noonline SLA does not ask AI to do the city's work. It requires ordinary users to complete midday movement with physical routes, fixed information, support points and human fallback when AI, phones or screens are unavailable.

LEVEL 1

Three key areas and direct access: primary + secondary <=400 m is a concept support-spacing design target.

LEVEL 2

Inter-zone Jing-Zhang connector: route recognition, cultural sequence and basic AI-OFF wayfinding; no continuous SLA coverage claim.

Industry, Public Service, and Urban Interfaces

V3.0 / FIG02

Four concept land-use partitions and their relation to the Level 1 support network; no inferred FAR, height, or statutory control.

Concept geometry / provisional boundary / not field verified

Different spatial prototypes, not the same node template renamed three times

Three Key Areas, Three Spatial Prototypes

V3.0 / FIG 03

One Noonline SLA principle takes different spatial form in R&D testing, civic culture, and transit-business transfer.

ZHONGZHIYUAN

RESEARCH TEST VALIDATION PORCH

Distinct spatial moves

1

 Pedestrian continuity

2

 Safety buffer

3

 Observable testing / human check

Primary / secondary / fallback are concept design; seating, water, entries and human responsibility remain field unknown.

AI ORIGIN

JING-ZHANG AI CIVIC LIVING ROOM

Distinct spatial moves

1

 Jing-Zhang memory edge

2

 No-phone cultural reading

3

 Bilingual entry / civic stay

Primary / secondary / fallback are concept design; seating, water, entries and human responsibility remain field unknown.

DAZHONGSI

TRANSIT LUNCH INTERFACE

Distinct spatial moves

1

 Transit transfer

2

 Crossing / accessible fallback

3

 Lunch pause / manual fallback

Primary / secondary / fallback are concept design; seating, water, entries and human responsibility remain field unknown.

AI is an adaptive layer; physical public service remains the prerequisite

Jing-Zhang Memory -> Civic Daily Life -> Public AI Interpretation -> Research / Testing -> Transit / Business Everyday Use

Precise heritage intervention locations and protection requirements await authoritative material. This is a conceptual heritage sequence, not fabricated heritage coordinates.

AI_OFF_TEST = PASS_WITH_PROVISIONAL_PHYSICAL_NETWORK

SLA-A = B; SLA-B = C; SLA-C = C. Target SLA does not auto-upgrade because of concept drawings.

Evidence shortage does not advance a project package automatically
