Design Basis & Three–Level Scope

Design basis / scope / data boundary

Design basis

Anchored on the official announcement and the agent–facing open–call taskbook, plus the machine–readable site package (brief, sources, registries, ranges, standards). Every judgment is decomposed into traceable sources, recomputable metrics, verifiable layers and human–reviewable assumptions.

Three–level scope

- Coordinated research area 43.6 km2.
- Overall design area 11.4 km2, regulatory–plan–depth urban design.
- Key detailed areas 368.4 ha: Zhongzhiyuan (192.1), AI Origin (104.3), Dazhongsi (72.0).

Existing conditions & data boundary

The heritage railway corridor anchors existing universities, research, industry and communities. No official redline in the repository, so provisional geometry is used; boundary/controls/redlines/ownership/utilities/heritage/engineering are logged as pending assumptions and risks.

Research Area: Industry & Future City

AI ecosystem / future city / brand

World-class AI innovation ecosystem

Linking university-source, open collaboration, firm conversion, public experience and international communication. 5-8 global cases (Sand Hill, King's Cross, MaRS, Tel Aviv, Munich, Tokyo city-lab, Singapore) distilled into transferable mechanisms.

Naming / positions / functions / areas+wings

Main name JAM Commons; logo draws on railway sleeper x neural-net, with rail-rust + neural blue. Three positions, five functions, three cores + two wings form a coherent loop.

Overall Design: Renewal & Detailed Design

land use / intensity / fabric

Structure: spine–cores–wings–nodes

Heritage park spine runs N–S; living/public west, AI industry/research east. Land use fully tiles the provisional boundary without overlap, coded per national land–use classification.

Intensity & scale (pending)

Overall area ~1141 ha; footprint 151 ha, density ~13.3% (illustrative). FAR / total floor area / height are unknown pending approved controls.

Transport & slow-mobility

Heritage slow-mobility greenway as the N-S spine; station links at Dazhongsi, Wudaokou/Qinghua-donglu, Zhongzhiyuan; community & industry micro-circulation; repair corridor gaps and cross-ring nodes.

Municipal & new infrastructure

Coordinate utilities with distributed energy, edge-compute stations, and service-AI access; standards and operations deepen after controls/pipelines/fire/flood are confirmed – currently pending.

Blue–Green Network & Urban Character

public space / heritage / culture

Blue–green & public space

Heritage park spine links Qinghe, Xiaoyuehe, universities, firms and communities. Green ratio ~17.7%, public open space ~5.7% (provis- ional; recompute after official data).

Character & cultural narrative

Blend Jingzhang railway history, Zhongguancun innovation culture and AI–native culture into skyline, interfaces, massing, public art a- nd wayfinding. AI pilgrimage landmarks: Memory Gate, Origin Honor Wall, Full–stack Beacon; all culture assets rights–cleared.

Key Areas: Detailed Design

three implementation–depth areas

Three key areas

Three areas chained on one spine at implementation depth: uses, building scale, retain/renovate/demolish, public space, transport and projects, all as concepts pending controls/ownership/engineering.

Spatial strategy & scenarios

Garden-type innovation district around full-stack self-reliant innovation, standards, safety governance, display and external transport ; Qinghe edge hosts low-carbon exchange and open testing.

Levers & risks

Start with public-space / operation / open-scenario levers; height, demolition ratio, utilities and ownership remain pending official data, not approved conclusions.

Spatial strategy & scenarios

Near-campus innovation: tech-transfer, talent zone, open-source system; stitch campus-park-block walking; add release, talent services, living and collaboration spaces; Origin Forum plaza.

Levers & risks

Start with public-space / operation / open-scenario levers; height, demolition ratio, utilities and ownership remain pending official data, not approved conclusions.

Dazhongsi AI Industry Cluster

AI-native business

Spatial strategy & scenarios

Around leading firms, agents/terminals, content, data-elements and commerce: station TOD integration and four-quadrant walking, AI-native consumption/business scenarios and public realm upgrade.

Levers & risks

Start with public-space / operation / open-scenario levers; height, demolition ratio, utilities and ownership remain pending official data, not approved conclusions.

Renewal project list (concept)

- JZ-01 corridor slow-mobility gap repair (near)
- JZ-02 Dazhongsi four-quadrant TOD walking (near)
- JZ-03 Origin tech-transfer street (mid)
- JZ-04 Qinghe waterfront innovation edge (mid)
- JZ-05 AI public-service & edge-compute nodes (mid)
- JZ-06 global AI week public route (long)

Phasing

Near term runs light facilities/operations/experience first; mid term advances renewal & scenarios; long term deepens after controls/utilities/ownership. All are concepts for professional deepening.

Personas

>=5 personas (developers, startups, corporate visitors/investors, faculty/students, residents, international scholars/visitors); for each: need -> spatial response -> privacy & human-review boundary.

AI+ scenario cards (>=10, 3 test scenarios)

>=10 scenario cards including 3 industry test/validation scenes; open-source hall, governance gallery, heritage tour, mobility diagnosis, public-service kiosk, data-element hub, low-carbon edge station; all follow data-minimization, public sources, explainability, human review.

Key metrics (provisional, EPSG:4548)

Site area 1141 ha	Green ratio 17.7%
Public open space 5.7%	Building footprint 151 ha
Building density* 13.3%	Key areas 3

Known metrics are recomputed from the same GeoJSON; FAR / total floor area / height are unknown pending official controls. Compliance matrix covers announcement 1.3/1.4/1.5 and agent.1–agent.6.

Data gaps & risks

Official redline, precise key–area boundaries, controls (FAR/height/density/green/setback), road redlines, ownership, utilities, fire, flood, heritage, engineering are all pending official data; nothing is statutory/approved.

Copyright & compliance

All text/geometry/figures/data are agent–generated or cleared public sources (see sources.json & copyright statement); no personal data collected; no statutory conclusions; bilingual submission. All spatial suggestions are concepts for professional deepening.
